FUND SUMMARY – Anfield Universal Fixed Income ETF

Investment Objective: The Fund seeks current income.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.75%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.42%
Acquired Fund Fees and Expenses ⁽¹⁾⁽²⁾	0.05%
Total Annual Fund Operating Expenses	1.23%
Fee Waiver and Expense Reimbursement	(0.23)%
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ⁽³⁾	1.00%

- (1) Estimated for the current fiscal year.
- (2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table will not correlate to the expense ratio in the Fund's financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.
- (3) The Fund's adviser has contractually agreed to reduce the Fund's fees and/or absorb expenses of the Fund until at least September 1, 2019 to ensure that total annual Fund operating expenses after fee waiver and reimbursement (exclusive of any taxes, interest, brokerage commissions, expenses incurred in connection with any merger or reorganization, indirect expenses, expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) will not exceed 0.95% of average daily net assets. This agreement may be terminated by the Fund's Board of Trustees on 60 days' written notice to the adviser. These fee waivers and expense reimbursements are subject to possible recoupment from the Fund in future years on a rolling three year basis (within the three years after the fees have been waived or reimbursed) if such recoupment can be achieved without exceeding the foregoing expense limits as well as any expense limitation in effect at the time the reimbursement is made.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$102	\$368

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund's performance.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund ("ETF") that normally invests at least 80% of its net assets, including any borrowings for investment purposes, in a diversified portfolio of fixed income instruments. The Fund is not managed relative to an index and has broad flexibility to allocate its assets across different types of securities and sectors of the fixed income markets. The principal investments of the Fund include corporate bonds, U.S. government and agency securities, master-limited partners ("MLPs") (tied to energy-related commodities), private debt, foreign sovereign bonds, convertible securities, bank loans, asset-backed securities, mortgage-backed securities, and cash equivalent instruments. To a lesser extent, the Fund may invest in dividend-paying common stocks. The Fund may also invest in various types of derivatives, including futures, options, credit default swaps, total return swaps and repurchase agreements. The Fund may use derivatives as a substitute for making direct investments in underlying instruments, to reduce certain exposures or to "hedge" against market volatility and other risks. The Fund may also invest in other investment companies, including other exchange-traded funds.

The Fund may invest in fixed income instruments with fixed or adjustable (floating) rates. The Fund does not seek to maintain any particular weighted average maturity or duration, and may invest in fixed income instruments of any maturity or duration. The Fund may invest in both investment grade and below investment grade (often referred to as "high yield" or "junk" bonds) securities, subject to a maximum of up to 50% of the Fund's assets in below investment grade securities. The Fund will typically invest a substantial portion of the Fund's investments in securities of issuers with a range of credit ratings that have stable or improving fundamentals. Securities of these issuers include secured bank loans and below investment grade bonds. The Fund may invest without limit in U.S. and non-U.S. dollar-denominated securities of U.S. and foreign issuers, including investing up to 20% of its net assets in issuers located in emerging market countries.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. While Federal law limits bank borrowings to one-third of a fund's assets (which includes the borrowed amount), the use of derivatives is not limited the same manner. Federal law generally requires the Fund to segregate or " earmark" liquid assets or otherwise cover the market exposure of its derivatives. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

The Fund's investment process includes both a top-down macroeconomic analysis and a bottom-up analysis of individual securities. In its evaluation of a potential investment, the Fund conducts a fundamental analysis of the individual issuer, reviews the valuation of the security and the relative valuations of similar securities, and analyzes the supply and demand for the security in the market. The Fund seeks to identify companies in stable and growing sectors of the economy that generate sufficient revenue to meet their debt obligations. The Fund will sell a portfolio holding when the security no longer meets its investment criteria or when a more attractive investment is available.

The Fund may engage in active and frequent trading.

Principal Investment Risks. As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect the Fund's net asset value and performance

As with any fund, there is no guarantee that the Fund will achieve its goal.

Active Trading Risk. A higher portfolio turnover due to active and frequent trading will result in higher transactional and brokerage costs.

Authorized Participant Concentration Risk. To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value (NAV) and may face delisting.

Bank Loan Risk. The Fund's investments in secured and unsecured participations in bank loans and assignments of such loans may create substantial risk. In making investments in such loans, which are made by banks or other financial intermediaries to borrowers, the Fund will depend primarily upon the creditworthiness of the borrower for payment of principal and interest.

Common Stock Risk. The stock (*i.e.*, equity) market can be volatile. The prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Convertible Securities Risk. The market value of a convertible security performs like that of a regular debt security; that is, if market interest rates rise, the value of a convertible security usually falls. In addition, convertible securities are subject to the risk that the issuer will not be able to pay interest or dividends when due, and their market value may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer risks that apply to the underlying common stock.

Counterparty Credit Risk. The stability and liquidity of many derivative transactions depends in large part on the creditworthiness of the parties to the transactions. If a counterparty to such a transaction defaults, exercising contractual rights may involve delays or costs for the Fund. Furthermore, there is a risk that a counterparty could become the subject of insolvency proceedings, and that the recovery of securities and other assets from such counterparty will be delayed or be of a value less than the value of the securities or assets originally entrusted to such counterparty.

Credit Risk. The risk that the Fund could lose money if the issuer or guarantor of a fixed income security is unwilling or unable to make timely payments to meet its contractual obligations. Changes in the credit rating of a debt security held by the Fund could have a similar effect.

Currency Risk. The risk that foreign currencies will decline in value relative to the U.S. dollar and adversely affect the value of the Fund's investments in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, or in derivatives that provide exposure to, foreign (non-U.S.) currencies.

Cybersecurity Risk. There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.

Derivatives Risk. The derivative instruments in which the Fund may invest, including futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments, may be more volatile than other instruments. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Changes in the market value of the derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.

Emerging Markets Risks. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. In addition, many emerging financial markets have far lower trading volumes and less liquidity than developed markets.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to the special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as “Creation Units.” You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues.* Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund’s shares may not be developed or maintained. If the Fund’s shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund’s shares.
- *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s net asset value.
 - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.
 - In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

Fixed Income Risk. When the Fund invests in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund. In general, the market price of fixed income securities with longer maturities or durations will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund’s share price and total return to be reduced and fluctuate more than other types of investments.

Fluctuation of Net Asset Value Risk. The NAV of the Fund’s shares will generally fluctuate with changes in the market value of the Fund’s holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund’s holdings trading individually or in the aggregate at any point in time.

Foreign (Non-U.S.) Investment Risk. Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies, due to less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political changes or diplomatic developments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers.

Futures Contract Risk. Futures contracts are subject to the same risks as the underlying investments that they represent, but also may involve risks different from, and possibly greater than, the risks associated with investing directly in the underlying investments. Investments in futures contracts involve additional costs, may be more volatile than other investments and may involve a small initial investment relative to the risk assumed. In connection with the Fund’s use of futures contracts, if the value of investments is incorrectly forecasted, the Fund might have been in a better position if the Fund had not entered into the contract. Because the futures utilized by the Fund are standardized and exchange traded, where the exchange serves as the ultimate counterparty for all contracts, the primary credit risk on futures contracts is the creditworthiness of the exchange itself. Futures are also subject to market risk, interest rate risk (in the case of futures contracts relating to income producing securities) and index tracking risk (in the case of stock index futures).

Gap Risk. The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.

Hedging Transactions Risk. The Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Because the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.

High Yield Risk. Investment in or exposure to high yield (lower rated or below investment grade) debt instruments (also known as "junk bonds") may involve greater levels of interest rate, credit, liquidity and valuation risk than for higher rated instruments. High yield debt instruments are considered higher risk than investment grade instruments with respect to the issuer's continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments.

Index Risk. If a derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Issuer-Specific Risk. The value of a specific security can be more volatile than the market as a whole and may perform worse than the market as a whole.

Investment Companies and Exchange-Traded Funds Risks. When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of other investment company's or ETF's operating expenses, including management fees in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments held by the investment company or ETF. The Fund will also incur brokerage costs when it purchases and sells ETFs.

Leveraging Risk. The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of a Fund's other risks. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. In the past, in stressed markets, certain types of mortgage-backed securities suffered periods of illiquidity if disfavored by the market.

Management Risk. The risk that investment strategies employed by the Fund's adviser in selecting investments for the Fund may not result in an increase in the value of your investment or in overall performance equal to other similar investment vehicles having similar investment strategies.

Market Risk. Overall equity market risk may affect the value of individual instruments in which the Fund invests. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, interest rate levels, and political events affect the securities markets. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Market Events Risk. There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve have recently reduced market support activities. Further reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

MLP Risk. An investment in MLP units involves certain risks which differ from an investment in the securities of a corporation. Holders of MLP units have limited control and voting rights on matters affecting the partnership. In addition, there are certain tax risks associated with an investment in MLP units and conflicts of interest exist between common unit holders of MLPs and the general partner, including those arising from incentive distribution payments.

Mortgage-Backed and Asset-Backed Securities Risk. The risk of investing in mortgage-backed and other asset-backed securities, including prepayment risk, extension risk, interest rate risk, market risk and management risk. Mortgage-backed securities include caps and floors, inverse floaters, mortgage dollar rolls, private mortgage pass-through securities, resets and stripped mortgage securities. The Fund will invest less than 25% of its net assets in asset-backed securities or mortgage-backed securities that are below-investment grade.

New Fund Risk. The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders

Prepayment and Extension Risk. Many types of fixed income securities are subject to prepayment risk. Prepayment occurs when the issuer of a fixed income security can repay principal prior to the security's maturity. Fixed income securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a fixed income security can be difficult to predict and result in greater volatility. On the other hand, rising interest rates could cause prepayments of the obligations to decrease, extending the life of mortgage- and asset-backed securities with lower payment rates. This is known as extension risk and may increase the Fund's sensitivity to rising rates and its potential for price declines.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund. For example, the SEC recently proposed regulations that, upon effectiveness, would subject activities of mutual funds trading certain derivative instruments to additional regulation, which could increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

Securities Lending Risk. The Fund may lend portfolio securities to institutions, such as banks and certain broker-dealers. The Fund may experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund.

Swap Risk. Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.

- *Credit Default Swaps Risk.* A credit default swap enables an investor to buy or sell protection against a credit event with respect to an issuer. Credit default swaps involve risks because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty). The Fund bears the loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.
- *Total Return Swaps Risk.* A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

U.S. Government Securities Risk. Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.

Valuation Risk. The sale price that the Fund could receive for a portfolio security may differ from the Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. In addition, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.

Variable or Floating Rate Securities. Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Floating rate securities will not generally increase in value if interest rates decline.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. In addition, shareholder reports containing financial and performance information will be mailed to shareholders semi-annually. Updated performance information will be available at no cost by visiting www.RegentsParkFunds.com or by calling 1-866-866-4848.

Investment Adviser: Regents Park Funds, LLC (“Regents Park” or the “Adviser”) serves as investment adviser to the Fund.

Sub-Adviser: Anfield Capital Management, LLC (“Anfield” or the “Sub-Adviser”) serves as Sub-Adviser to the Fund.

Portfolio Managers: The Fund is jointly managed by Cyrille Conseil, Head of Portfolio Management, Peter van de Zilver, Head of Portfolio Manager Analytics and Risk Management, and David Young, Chief Executive Officer. Messrs. Conseil, van de Zilver and Young have managed the Fund since it commenced operations in 2018.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a “Creation Unit”). Creation Units are issued and redeemed for cash and/or in-kind for securities. Individual shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV.

Tax Information: The Fund’s distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

Investment Objective: The Fund seeks current income. The Fund's investment objective may be changed by the Fund's Board of Trustees upon 60 days, prior written notice to shareholders.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund that normally invests at least 80% of its net assets, including any borrowings for investment purposes, in a diversified portfolio of fixed income instruments. The Fund is not managed relative to an index and has broad flexibility to allocate its assets across different types of securities and sectors of the fixed income markets. The principal investments of the Fund include corporate bonds, U.S. government and agency securities, master-limited partners ("MLPs") (tied to energy-related commodities), private debt, foreign sovereign bonds, convertible securities, bank loans, mortgage-backed securities, and cash equivalent instruments. To a lesser extent, the Fund may invest in dividend-paying common stocks. The Fund may also invest in various types of derivatives, including futures, options, credit default swaps, total return swaps and repurchase agreements. The Fund may use derivatives as a substitute for making direct investments in underlying instruments, to reduce certain exposures or to "hedge" against market volatility and other risks. Derivative instruments used by the Fund will be counted towards the 80% policy discussed above to the extent they have economic characteristics similar to the securities included within that policy.

The Fund may invest in fixed income instruments with fixed or adjustable (floating) rates. The Fund does not seek to maintain any particular weighted average maturity or duration, and may invest in fixed income instruments of any maturity or duration. The Fund may invest in both investment grade and below investment grade (often referred to as "high yield" or "junk" bonds) securities, subject to a maximum of up to 50% of the Fund's assets in below investment grade securities. The Fund will typically invest a substantial portion of the Fund's investments in securities of issuers with a range of credit ratings that have stable or improving fundamentals. Securities of these issuers include secured bank loans and below investment grade bonds. The Fund may invest without limit in U.S. and non-U.S. dollar-denominated securities of U.S. and foreign issuers, including investing up to 20% of its net assets in issuers located in emerging market countries.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

The Fund's investment process includes both a top-down macroeconomic analysis and a bottom-up analysis of individual securities. In its evaluation of a potential investment, the Fund conducts a fundamental analysis of the individual issuer, reviews the valuation of the security and the relative valuations of similar securities, and analyzes the supply and demand for the security in the market. The Fund seeks to identify companies in stable and growing sectors of the economy that generate sufficient revenue to meet their debt obligations. The Fund will sell a portfolio holding when the security no longer meets its investment criteria or when a more attractive investment is available.

In response to market, economic, political or other conditions, the Fund may temporarily use a different investment strategy for defensive purposes. Such a strategy could include investing up to 100% of the Fund's assets in cash or cash equivalent securities such as U.S. Treasury securities and money market mutual funds. To the extent that the Fund invests in money market mutual funds for cash positions, there will be some duplication of expenses because the Fund pays its pro-rata portion of such money market funds' advisory fees and operational fees. Defensive investing could affect the Fund's performance and the Fund might not achieve its investment objectives. The Fund may also invest a substantial portion of its assets in such instruments at any time to maintain liquidity or pending selection of investments in accordance with its policies.

The Fund is actively managed and may engage in frequent trading.

PRINCIPAL INVESTMENT RISKS

The following describes the principal risks the Fund may bear from its investments.

Active Trading Risk. A higher portfolio turnover may result in higher transactional and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains or losses, which may affect the taxes you pay as a Fund shareholder.

Authorized Participant Concentration Risk. To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value (NAV) and may face delisting.

Bank Loan Risk. The Fund's investments in secured and unsecured participations in bank loans and assignments of such loans may create substantial risk. In making investments in such loans, which are made by banks or other financial intermediaries to borrowers, the Fund will depend primarily upon the creditworthiness of the borrower for payment of principal and interest. If the Fund does not receive scheduled interest or principal payments on such indebtedness, the Fund's share price could be adversely affected. The Fund may invest in loan participations that are rated by a NRSRO or are unrated, and may invest in loan participations of any credit quality, including "distressed" companies with respect to which there is a substantial risk of losing the entire amount invested. In addition, certain bank loans in which the Fund may invest may be illiquid and, therefore, difficult to value and/or sell at a price that is beneficial to the Fund. The Fund may also gain exposure to bank loans through investments in investment companies and ETFs that invest in such instruments. In addition to the risks associated with bank loans, such investments would carry the risks associated with investment companies and exchange-traded funds, discussed below.

Cash Redemption Risk. The Fund may pay out of its redemption proceeds in cash rather than through the in-kind delivery of portfolio securities. The Fund may be required sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have incurred if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gains distributions than if the in-kind redemption process was used. Only certain institutional investors known as Authorized Participants who have entered into an agreement with the Fund's distributor may redeem shares from the Fund directly; all other investors buy and sell shares at market prices on an exchange.

Common Stock Risk. The stock (*i.e.*, equity) market can be volatile. The prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Convertible Securities Risk. Convertible securities include fixed income securities that may be exchanged or converted into a predetermined number of the issuer's common stock at the option of the holder during a specified period. The market value of a convertible security performs like that of a regular debt security; that is, if market interest rates rise, the value of a convertible security usually falls. In addition, convertible securities are subject to the risk that the issuer will not be able to pay interest or dividends when due, and their market value may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer risks that apply to the underlying common stock.

Counterparty Credit Risk. The stability and liquidity of repurchase agreements, swap transactions, forwards and over-the-counter derivative transactions depend in large part on the creditworthiness of the parties to the transactions. It is expected that the Adviser will monitor the creditworthiness of firms with which it will cause the Fund to enter into repurchase agreements, interest rate swaps, caps, floors, collars or over-the-counter derivatives. If there is a default by the counterparty to such a transaction, the Fund will under most normal circumstances have contractual remedies pursuant to the agreements related to the transaction. However, exercising such contractual rights may involve delays or costs which could result in the value of the Fund being less than if the transaction had not been entered into. Furthermore, there is a risk that any of such counterparties could become insolvent and/or the subject of insolvency proceedings. If one or more of the Fund's counterparties were to become insolvent or the subject of insolvency proceedings in the United States (either under the Securities Investor Protection Act or the United States Bankruptcy Code), there exists the risk that the recovery of such vehicle's securities and other assets from such prime broker or broker-dealer will be delayed or be of a value less than the value of the securities or assets originally entrusted to such prime broker or broker-dealer.

In addition, the Fund may use counterparties located in jurisdictions outside the United States. Such local counterparties are subject to the laws and regulations in non-U.S. jurisdictions that are designed to protect their customers in the event of their insolvency. However, the practical effect of these laws and their application to the Fund's assets are subject to substantial limitations and uncertainties. Because of the large number of entities and jurisdictions involved and the range of possible factual scenarios involving the insolvency of a counterparty, it is impossible to generalize about the effect of their insolvency on the Fund and its assets. Shareholders should assume that the insolvency of any counterparty would result in a loss to the Fund, which could be material. If the Fund obtains exposure to one or more investment funds indirectly through the use of one or more total return swaps, those investments will be subject to counterparty risk.

Credit Risk. The risk that issuers or guarantors of a fixed income security cannot or will not make payments on the securities and other investments held by the Fund may result in losses to the Fund. In addition, the credit quality of securities held by the Fund may be lowered if an issuer's financial condition changes, which may lower their value and may affect their liquidity. Generally, the lower the credit rating of a security, the greater the risk that the issuer of the security will default on its obligation. High quality securities are generally believed to have relatively low degrees of credit risk. The Fund intends to enter into financial transactions with counterparties that are creditworthy at the time of the transactions. There is always the risk that the Investment Adviser's analysis of creditworthiness is incorrect or may change due to market conditions. To the extent that the Fund focuses its transactions with a limited number of counterparties, it will be more susceptible to the risks associated with one or more counterparties.

Currency Risk. The risk that foreign currencies will decline in value relative to the U.S. dollar and adversely affect the value of the Fund's investments in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, or in derivatives that provide exposure to, foreign (non-U.S.) currencies. Currency risk may be particularly high to the extent that the Fund invests in foreign (non-U.S.) currencies or engages in foreign currency transactions that are economically tied to emerging market countries.

Cybersecurity Risk. With the increased use of the Internet and because information technology ("IT") systems and digital data underlie most of the Fund's operations, the Fund and its Adviser, any Sub-Advisers, custodian, transfer agent, distributor and other service providers and the financial intermediaries (collectively "Service Providers") are exposed to the risk that their operations and data may be compromised as a result of internal and external cyber-failures, breaches or attacks ("Cyber Risk"). This could occur as a result of malicious or criminal cyber-attacks. Cyber-attacks include actions taken to: (i) steal or corrupt data maintained online or digitally, (ii) gain unauthorized access to or release confidential information, (iii) shut down the Fund or Service Provider website through denial-of-service attacks, or (iv) otherwise disrupt normal business operations. However, events arising from human error, faulty or inadequately implemented policies and procedures or other systems failures unrelated to any external cyber-threat may have effects similar to those caused by deliberate cyber-attacks.

Derivatives Risk. The Fund may invest in derivatives, which are financial instruments whose value is typically based on the value of a security, index or other instrument. These instruments include futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments. Derivatives may also include customized baskets or options (which may incorporate other securities directly and also various derivatives including common stock, options, and futures) structured as agreed upon by a counterparty, as well as specially structured types of mortgage- and asset-backed securities whose value is often linked to commercial and residential mortgage portfolios. The Fund's use of derivative instruments involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments, and certain derivatives may create a risk of loss greater than the amount invested.

Investing for hedging purposes or to increase the Fund's return may result in certain additional transaction costs that may reduce the Fund's performance. When used for hedging purposes, no assurance can be given that each derivative position will achieve a perfect correlation with the investment against which it is being hedged. Because the markets for certain derivative instruments are relatively new, suitable derivatives transactions may not be available in all circumstances for risk management or other purposes and there can be no assurance that a particular derivative position will be available when sought by the Adviser or that such techniques will be utilized by the Adviser.

The market value of derivative instruments and securities may be more volatile than that of other instruments, and each type of derivative instrument may have its own special risks, including the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates, and indices. Many derivatives, in particular privately negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund. The value of derivatives may not correlate perfectly, or at all, with the value of the assets, reference rates or indices they are designed to closely track.

Derivatives are subject to a number of other risks, including liquidity risk (the possibility that the derivative may be difficult to purchase or sell and the Adviser may be unable to initiate a transaction or liquidate a position at an advantageous time or price), leverage risk (the possibility that adverse changes in the value or level of the underlying asset, reference rate or index can result in loss of an amount substantially greater than the amount invested in the derivative), interest rate risk (some derivatives are more sensitive to interest rate changes and market price fluctuations), and counterparty risk (the risk that a counterparty may be unable to perform according to a contract, and that any deterioration in a counterparty's creditworthiness could adversely affect the instrument). In addition, because derivative products are highly specialized, investment techniques and risk analyses employed with respect to investments in derivatives are different from those associated with stocks and bonds. Finally, the Fund's use of derivatives may cause the Fund to realize higher amounts of short-term capital gains (generally taxed at ordinary income tax rates) than if the Fund had not used such instruments. Derivative instruments are also subject to the risk that the market value of an instrument will change to the detriment of the Fund. If the Adviser inaccurately forecast the values of securities, currencies or interest rates or other economic factors in using derivatives, the Fund might have been in a better position if it had not entered into the transaction at all. Some strategies involving derivative instruments can reduce the risk of loss, but they can also reduce the opportunity for gain or result in losses by offsetting favorable price movements in other investments held by the Fund. The Fund may also have to buy or sell a security at a disadvantageous time or price because regulations require funds to maintain offsetting positions or asset coverage in connection with certain derivatives transactions.

The SAI provides a more detailed description of the types of derivative instruments in which the Fund may invest and their associated risks.

Emerging Markets Risk. To the extent the Fund invests in emerging market securities, the risks associated with foreign (non-U.S.) investment risk may be particularly high. The Fund's investments in emerging market countries are subject to all of the risks of foreign investing generally, and have additional heightened risks due to a lack of established legal, political, business and social frameworks to support securities markets. These risks include less social, political and economic stability; smaller securities markets with low or nonexistent trading volume and greater illiquidity and price volatility; more restrictive national policies on foreign investment, including restrictions on investment in issuers or industries deemed sensitive to national interests; less transparent and established taxation policies; less developed regulatory or legal structures governing private and foreign investment; more pervasiveness of corruption and crime; less financial sophistication, creditworthiness and/or resources possessed by, and less government regulation of, the financial institutions and issuers with which the Fund transacts; less government supervision and regulation of business and industry practices, stock exchanges, brokers and listed companies than in the U.S.; greater concentration in a few industries resulting in greater vulnerability to regional and global trade conditions; higher rates of inflation and more rapid and extreme fluctuations in inflation rates; greater sensitivity to interest rate changes; increased volatility in currency exchange rates and potential for currency devaluations and/or currency controls; greater debt burdens relative to the size of the economy; more delays in settling portfolio transactions and heightened risk of loss from share registration and custody practices; and less assurance that recent favorable economic developments will not be slowed or reversed by unanticipated economic, political or social events in such countries. Because of these risk factors, the Fund's investments in developing market countries are subject to greater price volatility and illiquidity than investments in developed markets. Governments of emerging market countries may own or control parts of the private sector. Accordingly, government actions could have a significant impact on economic conditions. Certain emerging market countries require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular sector and/or company, limit the investment by foreign persons to a specific class of securities of an issuer that may have less advantageous rights than a domestically available class, require foreign investors to maintain a trading account with only one licensed securities company in the relevant market and/or impose additional taxes on foreign investors. These may contribute to the illiquidity of the relevant securities market, as well as create inflexibility and uncertainty as to the trading environment.

Energy Sector Risk. The Fund may invest in the energy sector, which is comprised of energy, industrial, consumer, infrastructure and logistics companies, and will therefore be susceptible to adverse economic, environmental, business, regulatory or other occurrences affecting that sector. The energy sector has historically experienced substantial price volatility. At times, the performance of these investments may lag the performance of other sectors or the market as a whole. Companies operating in the energy sector are subject to specific risks, including, among others, fluctuations in commodity prices; reduced consumer demand for commodities such as oil, natural gas or petroleum products; reduced availability of natural gas or other commodities for transporting, processing, storing or delivering; slowdowns in new construction; extreme weather or other natural disasters; and threats of attack by terrorists on energy assets. Additionally, energy sector companies are subject to substantial government regulation and changes in the regulatory environment for energy companies may adversely impact their profitability. Over time, depletion of natural gas reserves and other energy reserves may also affect the profitability of energy companies.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to the special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues.* Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
- *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses. In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value. The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price. When all or a portion of an ETF's underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value. In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.

Fixed Income Securities. Fixed income securities held by the Fund are subject to interest rate risk, call risk, prepayment and extension risk, credit risk, and liquidity risk, which are more fully described below. In addition, current market conditions may pose heightened risks for fixed income securities. Current interest rates are at or near historic lows. The Federal Reserve Board began tapering its quantitative easing program and in December 2015 began raising the federal funds rate, and there is a risk interest rates will rise. Future increases in interest rates could result in less liquidity and greater volatility of fixed income securities. The Fund may lose money if short-term or long-term interest rise sharply in a manner not anticipated by Fund management. A general rise in interest rates has the potential to cause investors to move out of fixed-income securities on a large scale, which may increase redemptions from funds that hold large amounts of fixed-income securities. Heavy redemptions could cause the Fund to sell assets at inopportune times or at a loss or depressed value and could hurt the Fund's performance. Moreover, new regulations applicable to and changing business practices of financial intermediaries that make markets in fixed income securities may result in those financial intermediaries restricting their market making activities for certain fixed income securities, which may reduce the liquidity and increase the volatility for such fixed income securities.

- *Call Risk.* During periods of declining interest rates, a bond issuer may “call,” or repay, its high yielding bonds before their maturity dates. The Fund would then be forced to invest the unanticipated proceeds at lower interest rates, resulting in a decline in its income.
- *Credit Risk.* Fixed income securities are generally subject to the risk that the issuer may be unable to make principal and interest payments when they are due. There is also the risk that the securities could lose value because of a loss of confidence in the ability of the borrower to pay back debt. Lower rated fixed income securities involve greater credit risk, including the possibility of default or bankruptcy.
- *Interest Rate Risk.* Fixed income securities are subject to the risk that the securities could lose value because of interest rate changes. For example, bonds tend to decrease in value if interest rates rise. Fixed income securities with longer maturities or durations sometimes offer higher yields, but are subject to greater price shifts as a result of interest rate changes than fixed income securities with shorter maturities. Investments in fixed income securities with longer maturities or durations may result in greater fluctuations in the value of the Fund. The Fund has no policy limiting the maturity or duration of the fixed income securities it purchases.
- *Liquidity Risk.* Trading opportunities are more limited for fixed income securities that have not received any credit ratings, have received ratings below investment grade or are not widely held. These features make it more difficult to sell or buy a security at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash or give up an investment opportunity, any of which could have a negative effect on its performance. Infrequent trading of securities may also lead to an increase in their price volatility. Liquidity risk also refers to the possibility that the Fund may not be able to sell a security or close out an investment contract when it wants to. If this happens, the Fund will be required to hold the security or keep the position open, and it could incur losses.
- *Prepayment and Extension Risk.* Many types of fixed income securities are subject to prepayment risk. Prepayment occurs when the issuer of a fixed income security can repay principal prior to the security’s maturity. Fixed income securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a fixed income security can be difficult to predict and result in greater volatility. On the other hand, rising interest rates could cause prepayments of the obligations to decrease, extending the life of mortgage- and asset-backed securities with lower payment rates. This is known as extension risk and may increase the Fund’s sensitivity to rising rates and its potential for price declines.
- *Variable and Floating Rate Securities.* Variable and floating rate securities generally are less sensitive to interest changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Floating rate securities will not generally increase in value if interest rates decline.

Fluctuation of Net Asset Value Risk. The NAV of the Fund’s shares will generally fluctuate with changes in the market value of the Fund’s holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund’s holdings trading individually or in the aggregate at any point in time.

Foreign (Non-U.S.) Investment Risk. Foreign securities include direct investments in non-U.S. dollar-denominated securities traded primarily outside of the United States and dollar-denominated securities of foreign issuers. Foreign securities also include indirect investments such as American Depositary Receipts (“ADRs”), European Depositary Receipts (“EDRs”) and Global Depositary Receipts (“GDRs”). ADRs are U.S. dollar-denominated receipts representing shares of foreign-based corporations. ADRs are receipts that are traded in the United States, and entitle the holder to all dividend and capital gain distributions that are paid out on the underlying foreign shares. EDRs and GDRs are receipts that often trade on foreign exchanges. They represent ownership in an underlying foreign or U.S. security and generally are denominated in a foreign currency. Foreign government obligations may include debt obligations of supranational entities, including international organizations (such as The International Bank for Reconstruction and Development, also known as the World Bank) and international banking institutions and related government agencies.

Foreign securities involve special risks and costs, which are considered by the investment adviser in evaluating the creditworthiness of issuers and making investment decisions for the Fund. Foreign securities fluctuate in price because of political, financial, social and economic events in foreign countries (including, for example, military confrontations, war and terrorism). A foreign security could also lose value because of more or less stringent foreign securities regulations and less stringent accounting and disclosure standards. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities.

Foreign securities, and in particular foreign debt securities, are sensitive to changes in interest rates. In addition, investment in the securities of foreign governments involves the risk that foreign governments may default on their obligations or may otherwise not respect the integrity of their obligations. The performance of investments in securities denominated in a foreign currency also will depend, in part, on the strength of the foreign currency against the U.S. dollar and the interest rate environment in the country issuing the currency. Absent other events which otherwise could affect the value of a foreign security (such as a change in the political climate or an issuer's credit quality), appreciation in the value of the foreign currency generally results in an increase in value of a foreign currency-denominated security in terms of U.S. dollars. A decline in the value of the foreign currency relative to the U.S. dollar generally results in a decrease in value of a foreign currency-denominated security. Additionally, many countries throughout the world are dependent on a healthy U.S. economy and are adversely affected when the U.S. economy weakens or its markets decline.

Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments also may involve risks associated with the level of currency exchange rates, less complete financial information about the issuers, less market liquidity, more market volatility and political instability. Future political and economic developments, the possible imposition of withholding taxes on dividend income, the possible seizure or nationalization of foreign holdings, the possible establishment of exchange controls or freezes on the convertibility of currency, trade restrictions (including tariffs) or the adoption of other governmental restrictions might adversely affect an investment in foreign securities. Additionally, foreign banks and foreign branches of domestic banks may be subject to less stringent reserve requirements and to different accounting, auditing and recordkeeping requirements.

While the Fund's investments may, if permitted, be denominated in foreign currencies, the portfolio securities and other assets held by the Funds or underlying funds are valued in U.S. dollars. Price fluctuations may occur in the dollar value of foreign securities because of changing currency exchange rates or, in the case of hedged positions, because the U.S. dollar declines in value relative to the currency hedged. Currency exchange rates may fluctuate significantly over short periods of time causing a Fund's or Underlying Fund's NAV to fluctuate as well. Currency exchange rates can be affected unpredictably by the intervention or the failure to intervene by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad. To the extent that a Fund or Underlying Fund is invested in foreign securities while also maintaining currency positions, it may be exposed to greater combined risk. The net currency positions of the Funds or underlying funds may expose them to risks independent of their securities positions.

The Fund may operate in euros and/or may hold euros and/or euro-denominated bonds and other obligations. The euro requires participation of multiple sovereign states forming the Euro zone and is therefore sensitive to the credit and general economic and political positions of each such state, including, each state's actual and intended ongoing engagement with and/or support for the other sovereign states then forming the European Union ("EU"), in particular those within the Euro zone. Changes in these factors might materially and adversely impact the value of securities in which a Fund or Underlying Fund has invested.

In addition, voters in the United Kingdom ("UK") have approved withdrawal from the European Union. Securities issued by companies domiciled in the UK could be subject to changing regulatory and tax regimes. Banking and financial services companies that operate in the UK or EU could be disproportionately impacted by those actions. Other countries may seek to withdraw from the EU and/or abandon the euro, the common currency of the EU, which could exacerbate market and currency volatility and negatively impact the Funds' investments in securities issued by companies located in EU countries. A number of countries in Europe have suffered terror attacks, and additional attacks may occur in the future. Ukraine has experienced ongoing military conflict; this conflict may expand and military attacks could occur in Europe. Europe has also been struggling with mass migration from the Middle East and Africa. Recent and upcoming European elections could, depending on the outcomes, further call into question the future direction of the EU. The ultimate effects of these events and other socio-political or geopolitical issues are not known but could profoundly affect global economies and markets. The impact of these actions, especially if they occur in a disorderly fashion, is not clear, but could be significant and far-reaching. Whether or not a Fund invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of a Fund's investments.

Futures Contract Risk. The successful use of futures contracts draws upon the Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so. The Fund could be unable to recover assets held at the futures clearing broker, even assets directly traceable to the Fund from the futures clearing broker in the event of a bankruptcy of the broker. A futures clearing broker is required to segregate customer funds pursuant to the Commodities Exchange Act and the regulations of the U.S. Commodity Futures Trading Commission ("CFTC"). However, in the unlikely event of the broker's bankruptcy, there is no equivalent of the Securities Investors Protection Corporation insurance as is applicable in the case of securities broker dealers' bankruptcies.

Gap Risk. The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. For example, the price of a stock can drop from its closing price one night to its opening price the next morning. The difference between the two prices is the gap. Trading halts may lead to gap risk.

Hedging Transactions Risk. The Adviser may employ various hedging techniques. The success of the Fund's hedging strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner.

Hedging against a decline in the value of a portfolio position does not eliminate fluctuations in the values of those portfolio positions or prevent losses if the values of those positions decline. Rather, it establishes other positions designed to gain from those same declines, thus seeking to moderate the decline in the portfolio position's value. Such hedging transactions also limit the opportunity for gain if the value of the portfolio position should increase. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs. The Adviser may determine, in its sole discretion, not to hedge against certain risks and certain risks may exist that cannot be hedged. Furthermore, the Adviser may not anticipate a particular risk so as to hedge against it effectively. Hedging transactions also limit the opportunity for gain if the value of a hedged portfolio position should increase.

High Yield Risk. Investment in or exposure to high yield (lower rated) debt instruments (also known as "junk bonds") may involve greater levels of interest rate, credit, liquidity and valuation risk than for higher rated instruments. High yield debt instruments are considered predominantly speculative with respect to the issuer's continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments. An economic downturn or period of rising interest rates could adversely affect the market for these securities and reduce market liquidity (liquidity risk). Less active markets can diminish the Fund's ability to obtain accurate market quotations when valuing portfolio securities and thereby give rise to valuation risk. If the issuer of a security is in default with respect to interest or principal payments, the issuer's security could lose its entire value. Furthermore, the transaction costs associated with the purchase and sale of high yield debt instruments may vary greatly depending on a number of factors and may adversely affect the Fund's performance.

Index Risk. If a derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index. If the index changes, the Fund could receive lower interest payments or experience a reduction in the value of the derivative to below what the Fund paid. Certain indexed securities, including inverse securities (which move in an opposite direction to the index), may create leverage, to the extent that they increase or decrease in value at a rate that is a multiple of the changes in the applicable index.

Investment Companies and Exchange-Traded Funds Risk. When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of the other investment company's or ETF's operating expenses, including the management fees of the investment company or ETF in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments the investment company or ETF holds. The Fund also will incur brokerage costs when it purchases and sells ETFs.

Issuer-Specific Risk. The value of a specific security or option can be more volatile than the market as a whole and may perform worse than the market as a whole. The value of large cap securities, as represented by the S&P 500 Index, can be more volatile than smaller cap securities due to differing market reactions to adverse issuer, political, regulatory, market, or economic developments.

Leveraging Risk. The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing a Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund's other risks. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause a Fund to be more volatile than if the Fund had not been leveraged.

Liquidity Risk. There is risk that the Fund may not be able to pay redemption proceeds within the time periods described in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, legal restrictions impairing its ability to sell particular securities or close derivative positions at an advantageous market price or other reasons. Certain portfolio securities may be less liquid than others, which may make them difficult or impossible to sell at the time and the price that the Fund would like or difficult to value. The Fund may have to lower the price, sell other securities instead or forgo an investment opportunity. Any of these events could have a negative effect on fund management or performance. Funds with principal investment strategies that involve investments in securities of companies with smaller market capitalizations, foreign securities, Rule 144A securities, derivatives or securities with substantial market and/or credit risk tend to have the greatest exposure to liquidity risk.

Management Risk. The net asset value of the Fund changes daily based on the performance of the securities and derivatives in which it invests. The Adviser's judgments about the attractiveness, value and potential appreciation of particular securities and derivatives in which the Fund invests may prove to be incorrect and may not produce the desired results. Additionally, the Adviser may have conflicts of interest that could interfere with its management of the Fund's portfolio. For example, the Adviser or its affiliates may manage other investment funds or have other clients that may be similar to, or overlap with, the investment objective and strategy of the Fund, creating potential conflicts of interest when making decisions regarding which investments may be appropriate for the Fund and other clients. Further information regarding conflicts of interest is available in the SAI.

Market Risk. Overall equity market risk, including volatility, may affect the value of individual instruments in which the Fund invests. Factors such as domestic and foreign economic growth and market conditions, interest rate levels, and political events affect the securities markets. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Market Events Risk. Financial markets are subject to periods of volatility, depressed valuations, decreased liquidity and heightened uncertainty, such as what was experienced in and around 2008. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, may take steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may also reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also contribute to decreased liquidity and increased volatility in the financial markets. The impact of these influences on the markets, and the practical implications for market participants, may not be fully known for some time.

MLP Risk. An investment in MLP units involves certain risks which differ from an investment in the securities of a corporation. Holders of MLP units have limited control and voting rights on matters affecting the partnership. In addition, there are certain tax risks associated with an investment in MLP units and conflicts of interest exist between common unit holders of MLPs and the general partner, including those arising from incentive distribution payments. Additional risks of MLPs include the following: a decrease in the production of natural gas, natural gas liquids, crude oil, coal or other energy commodities or a decrease in the volume of such commodities available for transportation, mining, processing, storage or distribution may adversely impact the financial performance of MLPs or MLP-related securities. To maintain or grow their revenues, these companies need to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. The financial performance of MLPs may be adversely affected if an MLP, or the companies to whom it provides the service, are unable to cost-effectively acquire additional reserves sufficient to replace the natural decline. Various governmental authorities have the power to enforce compliance with regulations and the permits issued under them, and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Stricter laws, regulations or enforcement policies could be enacted in the future which would likely increase compliance costs and may adversely affect the financial performance of MLPs. Volatility of commodity prices, which may lead to a reduction in production or supply, may also negatively impact the performance of MLPs. MLPs are also subject to risks that are specific to the industry they serve. MLPs that provide crude oil, refined product, natural gas liquids and natural gas services are subject to supply and demand fluctuations in the markets they serve which will be impacted by a wide range of factors, including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, and economic conditions, among others. As a partnership, an MLP has no tax liability at the entity level. If, as a result of a change in current law or a change in an MLP's business, an MLP were treated as a corporation for federal income tax purposes, such an MLP would be obligated to pay federal income tax on its income at the corporate tax rate. If an MLP were classified as a corporation for federal income tax purposes, the amount of cash available for distribution by the MLP would be reduced.

Mortgage-Backed and Asset-Backed Securities Risk. Associated with mortgage-backed and asset-backed securities is prepayment risk. If interest rates fall, the underlying debt may be repaid early, reducing the value of the Fund's investments. On the other hand, if interest rates rise, the duration of the securities may be extended, making them more sensitive to changes in interest rates. Furthermore, fewer prepayments may be made, which would cause the average bond maturity to rise, increasing the potential for the Fund to lose money. The value of mortgage-backed and asset-backed securities may be considerably affected by changes in interest rates, the market's perception of issuers, declines in the value of collateral, and the creditworthiness of the parties involved. The ability of the Fund to successfully utilize these instruments may depend on the ability of the Fund's Adviser to forecast interest rates and other economic factors correctly.

New Fund Risk. The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of mutual funds trading certain derivative instruments to regulation by the CFTC, including additional disclosure and operational obligations. The SEC recently proposed regulations that, upon effectiveness, would subject activities of mutual funds trading certain derivative instruments to additional regulation, which could increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

Securities Lending Risk. To realize additional income, the Fund may lend portfolio securities with a value of up to 33 1/3% of the total assets, including any collateral received from the loans. The Fund receives collateral equal to at least 102% of the market value for loans secured by government securities or cash in the same currency as the loaned shares and 105% for all other loaned securities at each loan's inception. The collateral the Fund receives will generally take the form of cash, U.S. Government securities, letters of credit, or other collateral as deemed appropriate by the Adviser. The Fund may use any cash collateral it receives to invest in short-term investments, including money market funds. It is the Trust's policy to obtain additional collateral from or return excess collateral to the borrower by the end of the next business day. Therefore, from time to time the value of the collateral received by the Fund may be less than the value of the securities on loan. The Fund will receive income earned on the securities loaned during the lending period and a portion of the interest or rebate earned on the collateral received. The risks associated with lending portfolio securities, as with other extensions of secured credit, include, but are not limited to, possible delays in receiving additional collateral or in the recovery of the securities loaned, possible loss of rights in the collateral should the borrower fail financially, as well as risk of loss in the value of the collateral or the value of the investments made with the collateral.

Swap Risk. Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.

- *Credit Default Swaps Risk.* A credit default swap enables an investor to buy or sell protection against a credit event with respect to an issuer. Credit default swaps involve risks because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty). The Fund bears the loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.
- *Total Return Swaps Risk.* A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

U.S. Government Securities Risk. Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.

Valuation Risk. The sale price the Fund could receive for a security may differ from the Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets, or that are valued using a fair value methodology. Because portfolio securities of the Fund may be traded on non-U.S. exchanges, and non-U.S. exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.

PORTFOLIO HOLDINGS DISCLOSURE: A description of the Fund's policies and procedures regarding the release of portfolio holdings information is available in the Fund's Statement of Additional Information ("SAI"). Shareholders may request portfolio holdings schedules at no charge by calling 1-866-866-4848.

CYBERSECURITY: The computer systems, networks and devices used by the Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its service providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Fund, the Adviser, and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

MANAGEMENT

INVESTMENT ADVISER

Regents Park Funds, LLC, located at 4041 MacArthur Boulevard, Suite 155, Newport Beach, CA 92660, serves as the investment adviser to the Fund. Subject to the authority of the Board of Trustees, the Adviser is responsible for the overall management of the Fund's business affairs pursuant to an Advisory Agreement between Fund and the Adviser. Regents Park was founded in May, 2016 and as of April 1, 2018, the Adviser had approximately \$43 million assets under management. Anfield Group, LLC ("Anfield Group"), which is wholly owned by the David Young and Sandra G. Glain Family Trust, wholly owns Regents Park.

Subject to the supervision of the Board of Trustees, the Adviser is responsible for managing the Fund's day-to-day operations; including selecting the overall investment strategies of the Fund; monitoring and evaluating investment sub-adviser performance; and providing related administrative services and facilities under an Investment Advisory Agreement between the Fund and the Adviser. The Adviser has the ultimate responsibility to oversee any investment sub-advisers, and to recommend their hiring, termination and replacement, subject to approval of the Trust's Board of Trustees.

The management fee set forth in the Investment Advisory Agreement is 0.75% annually, to be paid on a monthly basis. In addition to investment advisory fees, the Fund pays other expenses including costs incurred in connection with the maintenance of securities law registration, printing and mailing prospectuses and Statements of Additional Information to shareholders, certain financial accounting services, taxes or governmental fees, custodial, transfer and shareholder servicing agent costs, expenses of outside counsel and independent accountants, preparation of shareholder reports and expenses of trustee and shareholders meetings.

The Adviser has contractually agreed to reduce its fees and/or absorb expenses of the Fund, until at least September 1, 2019, to ensure that total annual fund operating expenses after fee waiver and/or reimbursement (exclusive of any front-end or contingent deferred loads, taxes, brokerage fees and commissions, borrowing costs (such as interest and dividend expense on securities sold short), acquired fund fees and expenses, fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example option and swap fees and expenses), or extraordinary expenses such as litigation) will not exceed 0.95% of the Fund's average daily net assets; subject to possible recoupment from the Fund in future years within the three years after the fees have been waived or reimbursed if such recoupment can be achieved within the foregoing expense limits or the expense limits in place at the time of the recoupment. Fee waiver and reimbursement arrangements can decrease the Fund's expenses and boost its performance. A discussion regarding the basis for the Board of Trustees' approval of the advisory agreement will be available in the Fund's annual report to shareholders dated October 31, 2018.

INVESTMENT SUB-ADVISER

Anfield Capital Management, LLC, located at 4041 MacArthur Boulevard, Suite 155, Newport Beach, CA 92660, serves as Sub-Adviser to the Fund. The Sub-Adviser was formed in 2009 and currently manages assets for private investors, financial intermediaries, and institutional clients. As of December 31, 2017, it had approximately \$540 million in assets under management. Anfield Group owns a 92% majority interest in Anfield. The Sub-Adviser is an affiliate of the Adviser. The Sub-Adviser is paid by the Adviser, not the Fund.

PORTFOLIO MANAGERS

Cyrille Conseil, CFA Portfolio Manager, Research and Trading

Mr. Conseil is a Portfolio Manager of Anfield and a senior member of the Adviser's Investment Committee. Mr. Conseil has over 25 years of investment management experience and joined the Adviser in 2012. Prior to joining the Adviser, Mr. Conseil was an Executive Vice President, Portfolio Manager and Head of the global leveraged loan desk at PIMCO since May of 2005. Mr. Conseil holds a Chartered Financial Analyst (CFA) designation.

Peter van de Zilver, CFA Portfolio Manager, Risk Management

Mr. van de Zilver has served as Head of Portfolio Manager Analytics and Risk Management at the Adviser since 2012. Mr. van de Zilver has over 20 years of investment management experience and retired in 2010 from a senior position in PIMCO's Portfolio Analytics group, where he was responsible for the architecture, development and implementation of many of PIMCO's analytics and risk management systems. Mr. van de Zilver holds a Chartered Financial Analyst (CFA) designation.

David Young, CFA Portfolio Manager, Global Strategy

Mr. Young has served as Chief Executive Officer at the Adviser since 2009, and as Chief Investment Officer from 2009 through 2012. Mr. Young has over 25 years of investment management experience and retired at the end of 2008 from his position as Executive Vice President and Account Manager with PIMCO, where he was responsible for contributing to the firm's global macroeconomic view and investment strategy, and building the business in the UK, Europe and the Middle East. Mr. Young holds a Chartered Financial Analyst (CFA) designation.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of securities in the Fund.

HOW SHARES ARE PRICED

The net asset value (“NAV”) and offering price (NAV plus any applicable sales charges) of the Fund’s shares is determined at the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern Time) on each day the New York Stock Exchange (“NYSE”) is open. NAV is computed by determining, on a per class basis, the aggregate market value of all assets of the applicable Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The NYSE is closed on weekends and New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV takes into account, on a per class basis, the expenses and fees of the Fund, including management, administration, and distribution fees, which are accrued daily. The determination of NAV for the Fund for a particular day is applicable to all applications for the purchase of shares, as well as all requests for the redemption of shares, received by the Fund (or an authorized broker or agent, or its authorized designee) before the close of trading on the NYSE on that day.

Generally, the Fund’s securities are valued each day at the last quoted sales price on each security’s primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers’ Automated Quotation System (“NASDAQ”) National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. If market quotations are not readily available, securities will be valued at their fair market value as determined using the “fair value” procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has delegated execution of these procedures to a fair value team composed of one or more representatives from each of the (i) Trust, (ii) administrator, and (iii) adviser. The team may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and ratifies the execution of this process and the resultant fair value prices at least quarterly to assure the process produces reliable results.

The Fund may use independent pricing services to assist in calculating the value of the Fund’s securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Fund. Because the Fund may invest in securities primarily listed on foreign exchanges, and these exchanges may trade on weekends or other days when the Fund does not price its shares, the value of some of the Fund’s portfolio securities may change on days when you may not be able to buy or sell Fund shares. In computing the NAV, the Fund values foreign securities held by the Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the NYSE. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in the Fund’s portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, the Adviser may need to price the security using the Fund’s fair value pricing guidelines. Without a fair value price, short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of the Fund’s portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing policies will prevent dilution of the Fund’s NAV by short term traders. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other funds to determine net asset value, or from the price that may be realized upon the actual sale of the security.

With respect to any portion of the Fund’s assets that are invested in one or more open-end management investment companies registered under the 1940 Act, the Fund’s net asset value is calculated based upon the net asset values of those open-end management investment companies, and the prospectuses for these companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

Premium/Discount Information

Most investors will buy and sell shares of the Fund in secondary market transactions through brokers at market prices and the Fund’s shares will trade at market prices. The market price of shares of the Fund may be greater than, equal to, or less than NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of shares of the Fund.

Information regarding how often the shares of the Fund traded at a price above (at a premium to) or below (at a discount to) the NAV of the Fund during the past four calendar quarters, when available, can be found at www.RegentsParkFunds.com.

HOW TO BUY AND SELL SHARES

Shares of the Fund will be listed for trading on Cboe BZX Exchange, Inc. under the symbol AFIF. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares, and shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

Authorized participants ("APs") may acquire shares directly from the Fund, and APs may tender their shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units, of 25,000 shares. Purchases and redemptions directly with the Fund must follow the Fund's procedures, which are described in the SAI.

The Fund may liquidate and terminate at any time without shareholder approval.

Share Trading Prices

The approximate value of shares of the Fund, an amount representing on a per share basis the sum of the current market price of the securities accepted by the Fund in exchange for shares of the Fund and an estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a "real-time" update of the NAV per share of the Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Fund is not involved in, or responsible for, the calculation or dissemination of the approximate value of the shares, and the Fund does not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding shares of the Fund and is recognized as the owner of all shares for all purposes.

Investors owning shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

The Fund's shares can only be purchased and redeemed directly from the Fund in Creation Units by APs, and the vast majority of trading in the Fund's shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund's trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund's ability to achieve its investment objective. However, direct trading by APs is critical to ensuring that the Fund's shares trade at or close to NAV. The Fund also employs fair valuation pricing to minimize potential dilution from market timing. In addition, the Fund imposes transaction fees on purchases and redemptions of Fund shares to cover the custodial and other costs incurred by the Fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund's trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the Fund's shares.

DISTRIBUTION AND SERVICE PLAN

The Fund has adopted a distribution and service plan (“Plan”) pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Fund is authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services (“Service Providers”). If a Service Provider provides these services, the Fund may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Fund, and there are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Fund.

Additional Compensation to Financial Intermediaries: Northern Lights Distributors, LLC, the Fund’s distributor, its affiliates, and the Fund’s Adviser or its affiliates may, at their own expense and out of their own legitimate profits, provide additional cash payments to financial intermediaries who sell shares of the Fund, including affiliates of the Adviser. Financial intermediaries include brokers, financial planners, banks, insurance companies, retirement or 401(k) plan administrators and others. These payments may be in addition to any Rule 12b-1 fees that the Fund could charge pursuant to a Rule 12b-1 plan and any sales charges that are disclosed elsewhere in this Prospectus. These payments are generally made to financial intermediaries that provide shareholder or administrative services, or marketing support. Marketing support may include access to sales meetings, sales representatives and financial intermediary management representatives, inclusion of the Fund on a sales list, including a preferred or select sales list, or other sales programs. These payments also may be made as an expense reimbursement in cases where the financial intermediary provides shareholder services to Fund shareholders.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Unlike interests in conventional mutual funds, which typically are bought and sold from and to the fund only at closing NAVs, the Fund’s shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day’s next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the Fund’s portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the shares’ in-kind redemption mechanism generally will not lead to a tax event for the Fund or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid monthly by the Fund. The Fund distributes its net realized capital gains, if any, to shareholders annually.

Distributions in cash may be reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available.

Taxes

As with any investment, you should consider how your investment in shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in shares.

Unless your investment in shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- The Fund makes distributions,
- You sell your shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

As stated above, dividends from net investment income, if any, ordinarily are declared and paid monthly by the Fund. The Fund may also pay a special distribution at the end of a calendar year to comply with federal tax requirements. Distributions from the Fund’s net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that the Fund’s dividends attributable to its “qualified dividend income” (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Fund shares at the rate for net capital gain -- a maximum of 20%. In addition, a 3.8% Medicare tax will also apply. A part of the Fund’s dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to federal income tax (excluding REITs) and excludes dividends from foreign corporations -- subject to similar restrictions.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund (if that option is available). Distributions reinvested in additional shares of the Fund through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the shares.

Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the shares and as capital gain thereafter. A distribution will reduce the Fund's NAV per Share and may be taxable to you at ordinary income or capital gain rates (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, the Fund is required to withhold 24% of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of shares is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. The ability to deduct capital losses from sales of shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An AP who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the shares being redeemed and the value of the securities. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many shares you purchased or sold and at what price. See "Tax Status" in the SAI for a description of the newly effective requirement regarding basis determination methods applicable to Share redemptions and the Fund's obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the shares under all applicable tax laws. See "TAX STATUS" in the SAI for more information.

FUND SERVICE PROVIDERS

Gemini Fund Services, LLC is the Fund's administrator and fund accountant. It has its principal office at 80 Arkay Drive, Suite 110, Hauppauge, NY 11788, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. It is an affiliate of the Distributor.

Brown Brothers Harriman & Co. ("BBH"), 50 Post Office Square, Boston, MA 02110, is the Fund's custodian and transfer agent.

Northern Lights Distributors, LLC (the "Distributor"), 17605 Wright Street, Omaha, NE 68130, is the distributor for the shares of the Fund. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Drinker Biddle & Reath, LLP, One Logan Square, Suite 2000, Philadelphia, PA 19103, serves as legal counsel to the Trust.

RSM US LLP, 555 17th Street, Suite 1000, Denver, CO 80202, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

OTHER INFORMATION

Investment by Other Investment Companies

The SEC has granted an exemptive order to the Adviser permitting, among other relief, registered investment companies and unit investment trusts that enter into an agreement with respect to certain investment companies that the Adviser or an affiliate advises (“Investing Funds”) to invest in such investment companies beyond the limits set forth in Section 12(d)(1) of the 1940 Act, subject to certain terms and conditions. This aspect of the exemptive order is not applicable to the Fund. Accordingly, Investing Funds must adhere to the limits set forth in Section 12(d)(1) of the 1940 Act when investing in the Fund.

Continuous Offering

The method by which Creation Units of shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent shares and sells the shares directly to customers or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the shares that are part of an overallotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Householding: To reduce expenses, the Fund mails only one copy of the prospectus and each annual and semi-annual report to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please call the Fund at 1-866-866-4848 on days the Fund is open for business or contact your financial institution. The Fund will begin sending you individual copies thirty days after receiving your request.

FINANCIAL HIGHLIGHTS

Because the Fund has only recently commenced investment operations, no financial highlights are available for the Fund at this time. In the future, financial highlights will be presented in this section of the Prospectus.

PRIVACY NOTICE

FACTS WHAT DOES TWO ROADS SHARED TRUST DO WITH YOUR PERSONAL INFORMATION

Why? Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.
