

Anfield Dynamic Fixed Income ETF

SUMMARY PROSPECTUS

August 18, 2020

ADFI

a series of Two Roads Shared Trust

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. The Fund's prospectus and Statement of Additional Information, both dated November 17, 2019, as supplemented, are incorporated by reference into this Summary Prospectus. You can obtain these documents and other information about the Fund online at <http://regentsparkfunds.com/adfi-summary-prospectus/>. You can also obtain these documents at no cost by calling 1-866-866-4848 or by sending an email request to OrderRegentsParkETF@geminifund.com. Shares of the Fund are listed and traded on the Cboe BZX Exchange.

Beginning on January 1, 2021, as permitted by regulations adopted by the Securities and Exchange Commission, paper copies of the Fund's shareholder reports like this one will no longer be sent by mail, unless you specifically request paper copies of the reports from the Fund or from your financial intermediary, such as a broker-dealer or bank. Instead, the reports will be made available on the Fund's website RegentsParkFunds.com, and you will be notified by mail each time a report is posted and provided with a website link to access the report.

If you have already elected to receive shareholder reports electronically, you will not be affected by this change and you need not take any action. You may elect to receive shareholder reports and other communications from the Fund or your financial intermediary electronically anytime by contacting your financial intermediary or, if you are a direct investor, by following the instructions included with paper Fund documents that have been mailed to you. You may also elect to receive all future reports in paper free of charge. You can inform the Fund or your financial intermediary that you wish to continue receiving paper copies of your shareholder reports by contacting your financial intermediary or, if you are a direct investor, by following the instructions included with paper Fund documents that have been mailed to you. Your election to receive reports in paper will apply to all funds held with the Trust and/or your financial intermediary.

Investment Objective: The Anfield Dynamic Fixed Income ETF (the "Dynamic Fixed Income ETF" or the "Fund") seeks to provide total return with capital preservation as a secondary objective.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.80%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.50%
Acquired Fund Fees and Expenses ⁽¹⁾⁽²⁾	0.69%
Total Annual Fund Operating Expenses	1.99%
Fee Waiver and Expense Reimbursement	(0.00)%
Total Annual Fund Operating Expenses After Fee Waiver and Expense Reimbursement ⁽³⁾	1.99%

(1) Estimated for the current fiscal year.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table will not correlate to the expense ratio in the Fund's financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

(3) The Fund's adviser has contractually agreed to reduce the Fund's fees and/or absorb expenses of the Fund until at least November 17, 2020 to ensure that total annual Fund operating expenses after fee waiver and reimbursement (exclusive of any taxes, interest and borrowing costs, sales loads, fees and expenses associated with investments in other collective investment vehicles or derivative instruments, brokerage fees and commissions, indirect expenses, expenses of other investment companies in which the Fund may invest, or extraordinary expenses such as litigation) will not exceed 1.30% of average daily net assets. This agreement may be terminated by the Fund's Board of Trustees on 60 days' written notice to the adviser. These fee waivers and expense reimbursements are subject to possible recoupment from the Fund in future years on a rolling three year basis (within the three years after the fees have been waived or reimbursed) if such recoupment can be achieved without exceeding the foregoing expense limits as well as any expense limitation in effect at the time the reimbursement is made.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. You may also pay brokerage commissions on the purchase or sale of Fund shares, which are not reflected in the Example. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$202	\$624

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund's performance.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund ("ETF") that is a "fund of funds," meaning that it primarily invests its assets in securities of other ETFs. The Fund normally invests at least 80% of its net assets, including any borrowings for investment purposes, in other unaffiliated ETFs ("Underlying Funds") that invest in any facet of the global debt markets, including corporate bonds, U.S. government and agency securities, private debt, foreign sovereign bonds, convertible securities, bank loans, asset-backed securities, mortgage-backed securities, and cash equivalent instruments. The Fund is not managed relative to an index and has broad flexibility to allocate its assets across different types of securities and sectors of the fixed income markets. The Fund's strategy seeks to outperform traditional core fixed income indices and styles over full market cycles by investing dynamically. It is expected that the Fund will typically hold 10-20 Underlying Funds to gain exposure to particular segments of the fixed income markets. These concentrated dynamic allocations are made with the goal of either capitalizing on positive opportunities or avoiding market declines. The Underlying Funds may invest heavily in foreign (non-U.S.) securities, and the Fund may have significant exposure through the Underlying Funds to issuers in emerging markets. The Fund may also invest in convertible securities. The Fund may also invest in various types of derivatives, including exchange listed and over the counter ("OTC") futures, options, total return swaps, forwards and repurchase agreements. The Fund or the Underlying Funds may use derivatives as a substitute for making direct investments in underlying instruments, to reduce certain exposures or to "hedge" against market volatility and other risks.

The Fund and the Underlying Funds may invest in fixed income instruments with fixed or adjustable (floating) rates. The Fund does not seek to maintain any particular weighted average maturity or duration, and may invest directly in or in Underlying Funds that hold fixed income instruments of any maturity or duration. The Fund and the Underlying Funds may invest in both investment grade and below investment grade (often referred to as "high yield" or "junk" bonds) securities, subject to a maximum of up to 50% of the Fund's assets in below investment grade securities. The Fund will typically invest, through its investments in the Underlying Funds, a substantial portion of the Fund's investments in securities of issuers with a range of credit ratings that have stable or improving fundamentals. Securities of these issuers include secured bank loans and below investment grade bonds.

Anfield Capital Management, LLC (the "Sub-Adviser") selects potential investments based on its ongoing analysis of available opportunities. The Fund's investment process includes bottom-up security research that incorporates a top-down economic framework. The Fund's sector selection is driven by proprietary fundamental research. The broad economic outlook is determined in cyclical and secular forums that set the investment tone, with an orientation to capital preservation. The Fund's price gains are balanced against a goal of preserving principle, with an emphasis on sectors with attractive fundamentals. The Fund's sector diversity aims to spread risk across multiple industries and companies and will de-emphasize sectors when their fundamentals are poor, as measured by, among other factors, valuation, including price-to-earnings ratio, quality of earnings prospects, profit margins and earnings. The Sub-Adviser expects that the Fund will generally hold 10-20 positions, although total holdings are dependent on market conditions, the Sub-Adviser's market views, and other factors. The Fund will sell a portfolio holding when it believes a sector has reached a target price or stop loss price, an investment thesis plays out, events fail to confirm the investment thesis, fundamentals deteriorate and cause a change to the risk-reward profile, or management identifies more attractive risk-adjusted return opportunities elsewhere.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. While Federal law limits bank borrowings to one-third of a fund's assets (which includes the borrowed amount), the use of derivatives is not limited in the same manner. Federal law generally requires the Fund to segregate or " earmark " liquid assets or otherwise cover the market exposure of its derivatives. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives. The Fund's investments that are denominated in foreign (non-U.S.) currencies may be hedged or un-hedged on an opportunistic basis.

The Fund may engage in active and frequent trading and is expected to have an annual portfolio turnover of over 100%. For the purpose of achieving income, the Fund may engage in securities lending.

Principal Investment Risks. As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured,

endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other investments. Many factors affect the Fund's net asset value and performance. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The following describes the risks the Fund bears directly or indirectly through investments in Underlying Funds. As with any fund, there is no guarantee that the Fund will achieve its goal.

Management Risk. The Fund's investment strategies may not result in an increase of the value of your investment in the Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. The Sub-Adviser determines the intrinsic value of the securities the Fund holds, and its assessment may be incorrect, which may result in a decline in the value of Fund shares and failure to achieve its investment objective. The Fund's portfolio managers use qualitative analyses and/or models. Any imperfections or limitations in such analyses or models could affect the ability of the portfolio managers to implement strategies. In addition, the Fund's dynamic strategy may be unsuccessful and may cause the Fund to miss attractive investment opportunities while in a defensive position.

Market Risk. Overall equity market risk may affect the value of individual instruments in which the Fund or an Underlying Fund invests. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond markets, volatility in the equities market or adverse investor sentiment affect the securities markets and political events affect the securities markets. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Fixed Income Risk. When the Fund and the Underlying Funds invest in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund or an Underlying Fund. In general, the market price of fixed income securities with longer maturities or durations will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund or an Underlying Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Foreign (Non-U.S.) Investment Risk. Since the Fund's investments may include ETFs with foreign securities, the Fund is subject to risks beyond those associated with domestic securities. Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies, due to less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political changes or diplomatic developments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers.

- *Emerging Markets Risks.* Investing in emerging markets involves not only the risks described above with respect to investing in foreign securities, but also other risks, including exposure to economic structures that are generally less diverse and mature, and to political systems that can be expected to have less stability, than those of developed countries. The typically small size of the markets may also result in a lack of liquidity and in price volatility of these securities. Frontier market countries generally have smaller economies or less developed capital markets than traditional emerging markets and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries. The economies of frontier market countries are less correlated to global economic cycles than those of their more developed counterparts and their markets have lower trading volumes and potential for extreme price and volatility illiquidity.

Underlying Fund Risk. The Fund's investment performance and its ability to achieve its investment objective are directly related to the performance of the Underlying Funds in which it invests. There can be no assurance that the Fund's investments in the Underlying Funds will achieve their respective investment objectives. The Fund is subject to the risks of the Underlying Funds in direct proportion to the allocation of its assets among the Underlying Funds.

Active Trading Risk. A higher portfolio turnover due to active and frequent trading will result in higher transactional and brokerage costs.

Authorized Participant Concentration Risk. To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value (NAV) and may face delisting.

Bank Loan Risk. The Fund's and Underlying Funds' investments in secured and unsecured participations in bank loans and assignments of such loans may create substantial risk. In making investments in such loans, which are made by banks or other financial intermediaries to borrowers, the Fund will depend primarily upon the creditworthiness of the borrower for payment of principal and interest.

Convertible Securities Risk. The market value of a convertible security performs like that of a regular debt security; that is, if market interest rates rise, the value of a convertible security usually falls. In addition, convertible securities are subject to the risk that the issuer will not be able to pay interest or dividends when due, and their market value may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer risks that apply to the underlying common stock.

Counterparty Credit Risk. The stability and liquidity of many derivative transactions depends in large part on the creditworthiness of the parties to the transactions. If a counterparty to such a transaction defaults, exercising contractual rights may involve delays or costs for the Fund. Furthermore, there is a risk that a counterparty could become the subject of insolvency proceedings, and that the recovery of securities and other assets from such counterparty will be delayed or be of a value less than the value of the securities or assets originally entrusted to such counterparty.

Credit Risk. The risk that the Fund could lose money if the issuer or guarantor of a fixed income security is unwilling or unable to make timely payments to meet its contractual obligations. Changes in the credit rating of a debt security held by the Fund or an Underlying Fund could have a similar effect.

Currency Risk. The risk that foreign currencies will decline in value relative to the U.S. dollar and adversely affect the value of the Fund's or an Underlying Fund's investments in foreign (non-U.S.) currencies or in securities that trade in, and receive revenues in, or in derivatives that provide exposure to, foreign (non-U.S.) currencies.

Cybersecurity Risk. There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, an Underlying Fund, the investment adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.

Derivatives Risk. The derivative instruments in which the Fund or the Underlying Funds may invest, including futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments, may be more volatile than other instruments. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Changes in the market value of the derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund or an Underlying Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.

Energy Sector Risk. The Fund or an Underlying Fund may invest in the energy sector, which is comprised of energy, industrial, consumer, infrastructure and logistics companies, and therefore will be susceptible to adverse economic, environmental, business, regulatory or other occurrences affecting that sector. The energy sector has historically experienced substantial price volatility. At times, the performance of energy sector investments may lag the performance of other sectors or the market as a whole. Companies operating in the energy sector are subject to specific risks, including, among others, fluctuations in commodity prices; reduced consumer demand for commodities such as oil, natural gas or petroleum products; reduced availability of natural gas or other commodities for transporting, processing, storing or delivering; slowdowns in new construction; extreme weather or other natural disasters; and threats of attack by terrorists on energy assets.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to the special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues.* Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.
- *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund's net asset value.

- The market price for the Fund's shares may deviate from the Fund's net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund's net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
- When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund's shares is open, there may be changes from the last quote of the closed market and the quote from the Fund's domestic trading day, which could lead to differences between the market value of the Fund's shares and the Fund's net asset value.
- In stressed market conditions, the market for the Fund's shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Fund's shares may, in turn, lead to differences between the market value of the Fund's shares and the Fund's net asset value.

Fluctuation of Net Asset Value Risk. The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. In addition, unlike conventional ETFs, the Fund is not an index Fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. Index-based ETFs have generally traded at prices that closely correspond to NAV per share. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the Shares will trade at premiums or discounts to NAV.

Focus Risk. To the extent the Fund invests in a smaller number of holdings, the Fund may be more adversely impacted by changes in the price of individual holdings than funds with a greater number of holdings .

Forward and Futures Contract Risk. Forward and futures contracts are subject to the same risks as the underlying investments that they represent, but also may involve risks different from, and possibly greater than, the risks associated with investing directly in the underlying investments. Investments in forward and futures contracts involve additional costs, may be more volatile than other investments and may involve a small initial investment relative to the risk assumed. In connection with the Fund's or an Underlying Fund's use of forward and futures contracts, if the value of investments is incorrectly forecasted, the Fund or Underlying Fund might have been in a better position if the Fund or Underlying Fund had not entered into the contract. Because the forwards and futures utilized by the Fund or an Underlying Fund are standardized and exchange traded, where the exchange serves as the ultimate counterparty for all contracts, the primary credit risk on forward and futures contracts is the creditworthiness of the exchange itself. Forwards and futures are also subject to market risk, interest rate risk (in the case of forward and futures contracts relating to income producing securities) and index tracking risk (in the case of stock index forwards and futures).

Gap Risk. The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.

Geographic and Sector Risk. The risk that if the Fund or an Underlying Fund invests a significant portion of its total assets in certain issuers within the same geographic region or economic sector, an adverse economic, business or political development affecting that region or sector may affect the value of the Fund's or Underlying Fund's investments more than if the Fund's or Underlying Fund's investments were not so focused. While the Fund or an Underlying Fund may not concentrate in any one industry, the Fund or an Underlying Fund may invest without limitation in a particular country or sector.

Hedging Transactions Risk. The Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Because the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.

High Yield Risk. Investment in or exposure to high yield (lower rated or below investment grade) debt instruments (also known as "junk bonds") may involve greater levels of interest rate, credit, liquidity and valuation risk than for higher rated instruments. High yield debt instruments are considered higher risk than investment grade instruments with respect to the issuer's continuing ability to make principal and interest payments and, therefore, such instruments generally involve greater risk of default or price changes than higher rated debt instruments.

Index Risk. If a derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Investment Companies and Exchange-Traded Funds Risks. When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of other investment company's or ETF's operating expenses, including management fees in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments held by the investment company or ETF. The Fund will also incur brokerage costs when it purchases and sells ETFs.

Issuer-Specific Risk. The value of a specific security can be more volatile than the market as a whole and may perform worse than the market as a whole.

Leveraging Risk. The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of a Fund's other risks. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

LIBOR Risk. The Fund may invest in securities and other instruments whose interest payments are determined by references to the London Interbank Offered Rate ("LIBOR"). According to various reports, certain financial institutions, commencing as early as 2005 and throughout the global financial crisis, routinely made artificially low submissions in the LIBOR setting process, which have subsequently resulted in investigations and fines. These developments may have adversely affected the interest rates on securities whose interest payments were determined by reference to LIBOR. Any future similar developments could, in turn, reduce the value of such securities owned by the Fund. In 2017, the United Kingdom's Financial Conduct Authority ("FCA") warned that LIBOR may cease to be available or appropriate for use by 2021. The unavailability of LIBOR presents risks to the Fund, including the risk that any pricing or adjustments to the Fund's investments resulting from a substitute reference rate may adversely affect the Fund's performance and/or NAV. It remains uncertain how such changes would be implemented and the effects such changes would have on the Fund, including any negative effects on the Fund's liquidity and valuation of the Fund's investments, issuers of instruments in which the Fund invests and financial markets generally.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. In the past, in stressed markets, certain types of mortgage-backed securities suffered periods of illiquidity if disfavored by the market.

Market Events Risk. There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve have recently reduced market support activities. Further reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

Mortgage-Backed and Asset-Backed Securities Risk. The risk of investing in mortgage-backed and other asset-backed securities, including prepayment risk, extension risk, interest rate risk, market risk and management risk. Mortgage-backed securities include caps and floors, inverse floaters, mortgage dollar rolls, private mortgage pass-through securities, resets and stripped mortgage securities.

New Fund Risk. The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, may not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Portfolio Turnover Risk. A higher portfolio turnover may result in higher transactional and brokerage costs.

Prepayment and Extension Risk. Many types of fixed income securities are subject to prepayment risk. Prepayment occurs when the issuer of a fixed income security can repay principal prior to the security's maturity. Fixed income securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a fixed income security can be difficult to predict and result in greater volatility. On the other hand, rising interest rates could cause prepayments of the obligations to decrease, extending the life of mortgage- and asset-backed securities with lower payment rates. This is known as extension risk and may increase the Fund's sensitivity to rising rates and its potential for price declines.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund. For example, the SEC recently proposed regulations that, upon effectiveness, would subject activities of mutual funds trading certain derivative instruments to additional regulation, which could increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

Securities Lending Risk. The Fund may lend portfolio securities to institutions, such as banks and certain broker-dealers. The Fund may experience a loss or delay in the recovery of its securities if the borrowing institution breaches its agreement with the Fund. In certain market conditions, the portion of the Fund's securities on loan may be significant, and may magnify the risk of such a loss or delay.

Swap Risk. Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund or an Underlying Fund and the risk that the Fund or Underlying Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.

- *Credit Default Swaps Risk.* A credit default swap enables an investor to buy or sell protection against a credit event with respect to an issuer. Credit default swaps involve risks because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty). The Fund bears the loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.
- *Total Return Swaps Risk.* A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

U.S. Government Securities Risk. Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.

Valuation Risk. The sale price that the Fund or an Underlying Fund could receive for a portfolio security may differ from the Fund's or Underlying Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. In addition, the value of the securities in the Fund's or an Underlying Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.

Variable or Floating Rate Securities. Variable and floating rate securities generally are less sensitive to interest rate changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Floating rate securities will not generally increase in value if interest rates decline.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of this Prospectus. In addition, shareholder reports containing financial and performance information will be mailed to shareholders semi-annually. Updated performance information will be available at no cost by visiting www.RegentsParkFunds.com or by calling 1-866-866-4848.

Investment Adviser: Regents Park Funds, LLC ("Regents Park" or the "Adviser") serves as investment adviser to the Fund.

Sub-Adviser: Anfield Capital Management, LLC ("Anfield" or the "Sub-Adviser") serves as Sub-Adviser to the Fund.

Portfolio Managers: The Fund is jointly managed by Cyrille Conseil, Head of Portfolio Management and Peter van de Zilver, Head of Portfolio Manager Analytics and Risk Management. Messrs. Conseil and van de Zilver have managed the Fund since it commenced operations in 2019.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a "Creation Unit"). Creation Units are issued and redeemed for cash and/or in-kind for securities. Individual

shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Cboe BZX Exchange, Inc. (the “Exchange”) and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV.

Tax Information: The Fund’s distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Adviser and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
