FUND SUMMARY – Anfield U.S. Equity Sector Rotation ETF

Investment Objective: The Anfield U.S. Equity Sector Rotation ETF (the “Fund”) seeks to outperform traditional large-cap equity indices and styles over full market cycles by investing in various sectors of the equity market.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.80%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.20%
Acquired Fund Fees and Expenses ⁽¹⁾	0.12%
Total Annual Fund Operating Expenses	1.12%

(1) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies. The operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same (except that the Example incorporates any applicable fee waiver and/or expense limitation agreements for only the first year). Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$114	\$356	\$617	\$1,363

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal period ended October 31, 2021, the portfolio turnover for the Fund was 31% of the average value of its portfolio.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund (“ETF”) that normally invests at least 80% of its net assets, including any borrowings for investment purposes, in a diversified portfolio of ETFs (“Underlying Funds”) that each invest at least 80% of their assets in U.S. equity securities. The Fund is not managed relative to an index and has broad flexibility to allocate its assets across different types of securities and sectors of the U.S. equity markets. The Fund defines equity securities to include ETFs that invest primarily in equity securities, such as common and preferred stocks. The Fund will invest primarily in large capitalization issuers, although its assets may be invested in securities of any market capitalization. Based on the Sub-Adviser’s tactical investment style, the Fund will invest in Underlying Funds based on the Sub-Adviser’s macroeconomic and asset cycle investing methodology that determines the rank order of equity sectors, and then makes periodic shifts to i) capitalize on market opportunities, or ii) avoid market declines. The Fund expects to hold between eight to ten Underlying Funds at any given time. The core of the Fund’s portfolio will be comprised of a combination of the 11 main industry sectors that make up the S&P 500 Index, although additional positions may be included in the Fund’s securities. Over- and under-weights of industry sectors are determined by the overall market and sector outlook. The Fund is generally rebalanced and adjusted on a quarterly basis, or when changing conditions warrant an adjustment.

The Fund may also invest in various types of derivatives, including exchange listed and over the counter (“OTC”) futures, options, total return swaps, forwards and repurchase agreements. The Fund or the Underlying Funds may use derivatives as a substitute for making direct investments in underlying instruments, to reduce certain exposures or to “hedge” against market volatility and other risks.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. While Federal law limits bank borrowings to one-third of a fund’s assets (which includes the borrowed amount), the use of derivatives is not limited the same manner. Federal law generally requires the Fund to segregate or “ earmark” liquid assets or otherwise cover the market exposure of its derivatives. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

The Fund's investment process includes both a top-down macroeconomic analysis and a forecasting methodology. The Sub-Adviser conducts an annual analysis of the state of the investment universe based on economic, political, and market conditions, which is used to forecast the outlook for various asset classes and industry sectors. The Sub-Adviser uses proprietary methods to continuously monitor the state of the national and international economy and markets for significant changes in order to invest in those sectors and market categories with the highest potential for positive returns during periods of relative economic strength while de-allocating from equities and utilizing defensive positioning such as allocations to cash when economic and market environments weaken. The Fund's tactical strategy further employs a proprietary analysis of fundamental, business cycle, and technical factors that specifically affect the securities used in the Fund's strategy. The Fund will sell a portfolio holding when the security no longer meets its investment criteria or when a more attractive investment is available.

The Fund may engage in active and frequent trading. For the purpose of achieving income, the Fund may engage in securities lending.

Principal Investment Risks. As with all funds, there is the risk that you could lose money through your investment in the Fund. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other investments. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect the Fund's net asset value and performance. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The Fund may be subject to the risks described below indirectly through investments in the Underlying Funds and through its own direct investments.

As with any fund, there is no guarantee that the Fund achieves its goal.

Management Risk. The Fund's investment strategies may not result in an increase of the value of your investment in the Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. The Sub-Adviser determines the intrinsic value of the securities the Fund holds and its assessment may be incorrect, which may result in a decline in the value of Fund shares and failure to achieve its investment objective. The Fund's portfolio managers use qualitative analyses and/or models. Any imperfections or limitations in such analyses or models could affect the ability of the portfolio managers to implement strategies. In addition, the Fund's tactical strategy may be unsuccessful and may cause the Fund to miss attractive investment opportunities while in a defensive position. Management risk includes the risk that the quantitative model used by the Adviser may not perform as expected, particularly in volatile markets.

Market Risk. Overall market risk may affect the value of individual instruments in which the Fund or an Underlying Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the equities or other securities markets or adverse investor sentiment affect the securities markets and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

Volatility Risk. The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to factors that affect markets generally or that affect a particular industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

Sector Risk. The Fund may focus its investments in securities of a particular sector. Sector risk is the risk that if the Fund invests a significant portion of its total assets in issuers within the same economic sector, an adverse business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crises, affecting that region or sector may affect the value of the Fund's investments more than if the Fund's investments were not so focused. Economic, legislative or regulatory developments may occur that significantly affect an entire sector. This may cause the Fund's NAV to fluctuate more than that of a fund that does not focus in a particular sector. While the Fund may not concentrate in any one industry, the Fund may invest without limitation in a particular sector.

- *Communication Services Sector.* Companies in the communications services sector are subject to the risk that they will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions, and/or increased competition.
- *Consumer Discretionary Sector.* The consumer discretionary sector may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preference, exploration and production spending. The impact of a pandemic, such as what was experienced with COVID-19, could negatively affect the global economy and, in turn, negatively affect companies in the consumer discretionary sector.
- *Consumer Staples Sector.* The consumer staples sector may be affected by the regulation of various product components and production methods, marketing campaigns and other factors affecting consumer demand.
- *Energy Sector.* Companies in the energy sector may be adversely affected by fluctuations in energy prices and supply and demand of energy fuels. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves. The demand for oil and other energy commodities was adversely impacted by the COVID-19 pandemic. Future pandemics could lead to reduced production and price volatility.
- *Financials Sector.* Companies in the financials sector are often subject to extensive governmental regulation and the potential for additional regulation, which may adversely affect the scope of their activities, the prices they can charge, and the amounts of capital they must maintain.
- *Healthcare Sector.* The healthcare sector may be affected by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services and product liability claims, among other factors. Healthcare companies are subject to competitive forces that may result in price discounting.
- *Industrials Sector.* The value of companies in the industrial sector may be adversely affected by supply and demand related to their specific products or services and industrial sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and the introduction of new products.
- *Information Technology Sector.* Information technology companies face intense competition and potentially rapid product obsolescence.
- *Materials Sector.* Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, environmental policies, import controls, competition, availability of resources and labor relations.
- *Real Estate Sector.* Securities in the real estate sector are susceptible to the risks associated with the real estate industry in general. Real estate companies may have lower trading volumes and may be subject to more abrupt or erratic price movements than the overall securities markets. Certain investments in real estate-related investments were negatively affected by the COVID-19 pandemic.
- *Utilities Sector.* The utilities sector is subject to significant government regulation and oversight. Companies in the utilities sector may be adversely affected due to increases in commodity and operating costs, rising costs of financing capital construction and the cost of complying with government regulations, among other factors. Deregulation may subject utility companies to greater competition and may adversely affect their profitability. As deregulation allows utility companies to diversify outside of their original geographic regions and their traditional lines of business, utility companies may engage in riskier ventures.

Common Stock Risk. The stock (*i.e.*, equity) market can be volatile. Equity securities are susceptible to general market fluctuations, volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. The prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Underlying Fund Risk. The Fund's investment performance and its ability to achieve its investment objective are directly related to the performance of the Underlying Funds in which it invests. There can be no assurance that the Fund's investments in the Underlying Funds will achieve their respective investment objectives. The Fund is subject to the risks of the Underlying Funds in direct proportion to the allocation of its assets among the Underlying Funds.

Active Trading Risk. A higher portfolio turnover due to active and frequent trading will result in higher transactional and brokerage costs.

Authorized Participant Concentration Risk. To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value and may face delisting.

Cybersecurity Risk. There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, an Underlying Fund, the investment adviser, investment sub-adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries (“Service Providers”) to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its Service Providers may adversely impact the Fund or its shareholders.

Derivatives Risk. The derivative instruments in which the Fund or the Underlying Fund may invest, including futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments, may be more volatile than other instruments and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Changes in the market value of the derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund or an Underlying Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at net asset value only in large blocks known as “Creation Units.” You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues.* Trading in shares on Cboe BZX Exchange, Inc. (the “Exchange”) may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund’s shares may not be developed or maintained. If the Fund’s shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund’s shares.
- *Market Price Variance Risk.* The market prices of shares will fluctuate in response to changes in net asset value and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the net asset value vary significantly. This means that shares may trade at a discount or premium to net asset value. If a shareholder purchases shares at a time when the market price is at a premium to the net asset value or sells shares at a time when the market price is at a discount to net asset value, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholders for the shares.
 - In times of market stress, such as what was experienced in 2020 with the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s net asset value.
 - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.
 - In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

Fluctuation of Net Asset Value Risk. Unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified Index. The net asset value of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the Shares will trade at premiums or discounts to net asset value.

Focus Risk. The Fund generally expects to invest in approximately eight to ten Underlying Funds at any given time, and as a result, the Fund's performance may be more volatile than the performance of funds holding more securities.

Forward and Futures Contract Risk. Forward and futures contracts are subject to the same risks as the underlying investments that they represent, but also may involve risks different from, and possibly greater than, the risks associated with investing directly in the underlying investments. Investments in forward and futures contracts involve additional costs, may be more volatile than other investments and may involve a small initial investment relative to the risk assumed. In connection with the Fund's or an Underlying Fund's use of forward and futures contracts, if the value of investments is incorrectly forecasted, the Fund or Underlying Fund might have been in a better position if the Fund or Underlying Fund had not entered into the contract. Because the forwards and futures utilized by the Fund or an Underlying Fund are standardized and exchange traded, where the exchange serves as the ultimate counterparty for all contracts, the primary credit risk on forward and futures contracts is the creditworthiness of the exchange itself. Forwards and futures are also subject to market risk, interest rate risk (in the case of forward and futures contracts relating to income producing securities) and index tracking risk (in the case of stock index forwards and futures).

Gap Risk. The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.

Geographic Risk. The risk that if the Fund or an Underlying Fund invests a significant portion of its total assets in certain issuers within the same geographic region, an adverse economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crises, affecting that region may affect the value of the Fund's or Underlying Fund's investments more than if the Fund's or Underlying Fund's investments were not so focused. The Fund or an Underlying Fund may invest without limitation in a particular country or region.

Hedging Transactions Risk. The Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Because the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.

Index Risk. If a derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index.

Issuer-Specific Risk. The value of a specific security can be more volatile than the market as a whole and may perform worse than the market as a whole.

Investment Companies and Exchange-Traded Funds Risks. When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of other investment company's or ETF's operating expenses, including management fees in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments held by the investment company or ETF. The Fund will also incur brokerage costs when it purchases and sells ETFs. During periods of market volatility, inverse ETFs may not perform as expected.

Large-Cap Securities Risk. The securities of large capitalization companies may underperform other segments of the market because such companies may be less responsive to competitive challenges and opportunities, such as changes in technology and consumer tastes. Large market capitalization companies may be unable to attain or maintain the high growth rate of successful smaller companies, especially during extended periods of economic expansion.

Leveraging Risk. The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund's other risks. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations, to meet additional margin requirements or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

Liquidity Risk. Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. In the past, in stressed markets, certain types of securities suffered periods of illiquidity if disfavored by the market. All of these risks may increase during periods of market turmoil, such as that experienced in 2020 with COVID-19, and could have a negative effect on the Fund's performance.

Market Events Risk. There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

New Fund Risk. The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, may not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund. For example, the SEC recently adopted regulations that will subject activities of funds trading certain derivative instruments to additional regulation, which may increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

Securities Lending Risk. The Fund may lend portfolio securities to institutions, such as banks and certain broker-dealers. The risks associated with lending portfolio securities, as with other extensions of secured credit, include, but are not limited to, possible delays in receiving additional collateral or in the recovery of the securities loaned, possible loss of rights in the collateral should the borrower fail financially, as well as risk of loss in the value of the collateral or the value of the investments made with the collateral. In certain market conditions, the portion of the Fund's securities on loan may be significant and may magnify the risk of such a loss or delay.

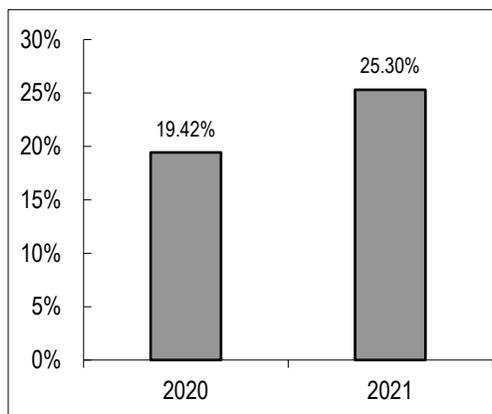

Swap Risk. Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund or an Underlying Fund and the risk that the Fund or Underlying Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.

- *Credit Default Swaps Risk.* A credit default swap enables an investor to buy or sell protection against a credit event with respect to an issuer. Credit default swaps involve risks because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty). The Fund bears the loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.
- *Total Return Swaps Risk.* A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

Valuation Risk. The sale price that the Fund or an Underlying Fund could receive for a portfolio security may differ from the Fund’s or Underlying Fund’s valuation of the security, particularly for securities that trade in low volume or volatile markets or that are valued using a fair value methodology. In addition, the value of the securities in the Fund’s or an Underlying Fund’s portfolio may change on days when shareholders will not be able to purchase or sell the Fund’s shares.

Performance: The bar chart and performance table below show the variability of the Fund’s returns, which is some indication of the risks of investing in the Fund by showing the Fund’s one-year and since inception performance compared with those of a broad measure of market performance. The bar chart shows performance of the Fund’s shares for each calendar year since the Fund’s inception. The performance table compares the performance of the Fund over time to the performance of a broad-based securities market index. You should be aware that the Fund’s past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information will be available at no cost by visiting www.RegentsParkFunds.com, or by calling 1-866-866-4848.

Performance Bar Chart for Calendar Year Ended December 31st

Best Quarter 06/30/2020 20.53%
Worst Quarter 03/31/2020 -18.35%

**Performance Table
Average Annual Total Returns
(For the year ended December 31, 2021)**

	One Year	Since Inception⁽¹⁾
Return before taxes	25.30%	22.50%
Return after taxes on Distributions	23.07%	21.20%
Return after taxes on Distributions and Sale of Fund Shares	15.91%	17.29%
S&P 500 Total Return Index⁽²⁾ <i>(reflects no deduction for fees, expenses or taxes)</i>	28.71%	23.70%

- (1) Inception date is December 16, 2019.
- (2) The S&P 500 Total Return Index is a market capitalization-weighted index of 500 widely held common stocks. Investors may not invest directly in an index. Index returns are gross of any fees, brokerage commissions or other expenses of investing.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor’s tax situation and may differ from those shown above, and after-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Investment Adviser: Regents Park Funds, LLC (“Regents Park” or the “Adviser”) serves as investment adviser to the Fund.

Sub-Adviser: Anfield Capital Management, LLC (“Anfield” or the “Sub-Adviser”) serves as Sub-Adviser to the Fund.

Portfolio Managers: The Fund is jointly managed by Peter van de Zilver, Head of Portfolio Manager Analytics and Risk Management, and David Young, Chief Executive Officer. Messrs. van de Zilver and Young have managed the Fund since it commenced operations in 2019.

Purchase and Sale of Fund Shares: The Fund will issue and redeem shares at net asset value (“NAV”) only in large blocks of 25,000 shares (each block of shares is called a “Creation Unit”). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Cboe BZX Exchange, Inc. and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (i.e., a premium), or less than NAV (i.e. a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at www.RegentsParkFunds.com.

Tax Information: The Fund’s distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser or the Sub-Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

Investment Objective: The Fund seeks outperform traditional large-cap equity indices and styles over full market cycles by investing in various sectors of the equity market. The Fund’s investment objective may be changed by the Fund’s Board of Trustees upon 60 days, prior written notice to shareholders.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund (“ETF”) that normally invests at least 80% of its net assets, including any borrowings for investment purposes, in a diversified portfolio of ETFs (“Underlying Funds”) that each invest at least 80% of their assets in U.S. equity securities. The Fund is not managed relative to an index and has broad flexibility to allocate its assets across different types of securities and sectors of the U.S. equity markets. The Fund defines equity securities to include ETFs that invest primarily in equity securities, such as common and preferred stocks. The Fund will primarily invest in large-cap issuers, but may invest in issuers of any capitalization range. Based on the Sub-Adviser’s tactical investment style, the Fund will invest in Underlying Funds based on the Sub-Adviser’s macroeconomic and asset cycle investing methodology that determines the rank order of equity sectors, and then makes periodic shifts to i) capitalize on market opportunities, or ii) avoid market declines. The Fund expects to hold between eight to ten Underlying Funds at any given time. The core of the Fund’s portfolio will be comprised of a combination of the 11 main industry sectors that make up the S&P 500 Index, although additional positions may be included in the Fund’s securities. Over- and under-weights of industry sectors are determined by the overall market and sector outlook. The Fund is generally rebalanced and adjusted on a quarterly basis, or when changing conditions warrant an adjustment.

The Fund may also invest in various types of derivatives, including exchange listed and over the counter (“OTC”) futures, options, credit default swaps, total return swaps, forwards and repurchase agreements. The Fund or the Underlying Funds may use derivatives as a substitute for making direct investments in underlying instruments, to reduce certain exposures or to “hedge” against market volatility and other risks.

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. While Federal law limits bank borrowings to one-third of a fund’s assets (which includes the borrowed amount), the use of derivatives is not limited the same manner. Federal law generally requires the Fund to segregate or “ earmark” liquid assets or otherwise cover the market exposure of its derivatives. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

The Fund’s investment process includes both a top-down macroeconomic analysis and a forecasting methodology. The Sub-Adviser conducts an annual analysis of the state of the investment universe based on economic, political, and market conditions, which is used to forecast the outlook for various asset classes and industry sectors. The Sub-Adviser uses proprietary methods to continuously monitor the state of the national and international economy and markets for significant changes in order to invest in those sectors and market categories with the highest potential for positive returns during periods of relative economic strength while de-allocating from equities and utilizing defensive positioning such as allocations to cash when economic and market environments weaken. The Fund’s tactical strategy further employs a proprietary analysis of fundamental, business cycle, and technical factors that specifically affect the securities used in the Fund’s strategy. The Fund will sell a portfolio holding when the security no longer meets its investment criteria or when a more attractive investment is available.

The Fund may engage in active and frequent trading. For the purpose of achieving income, the Fund may engage in securities lending.

In response to market, economic, political or other conditions, the Fund may temporarily use a different investment strategy for defensive purposes. Such a strategy could include investing up to 100% of the Fund's assets in cash or cash equivalent securities such as U.S. Treasury securities and money market mutual funds. To the extent that the Fund invests in money market mutual funds for cash positions, there will be some duplication of expenses because the Fund pays its pro-rata portion of such money market funds' advisory fees and operational fees. Defensive investing could affect the Fund's performance and the Fund might not achieve its investment objectives. The Fund may also invest a substantial portion of its assets in such instruments at any time to maintain liquidity or pending selection of investments in accordance with its policies.

PRINCIPAL AND OTHER INVESTMENT RISKS

As with all funds, there is the risk that you could lose money through your investment in the Fund. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. Neither the Adviser nor the Sub-Adviser can guarantee that the Fund will achieve its objectives. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect the Fund's net asset value and performance. It is important that investors closely review and understand these risks before making an investment in the Fund. Additional information regarding the principal and certain other risks of investing in the Fund is provided below. The Fund's Statement of Additional Information ("SAI"), which is incorporated by reference into this Prospectus, includes more information about the Fund and its investments and risks. The risks described in this Prospectus (and in the SAI) are not intended to include every potential risk of investing in the Fund. The Fund could be subject to additional risks because the types of investments it makes may change over time.

The following describes the risks the Fund bears indirectly through investments in Underlying Funds or directly through its own investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Active Trading Risk. A higher portfolio turnover may result in higher transactional and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains or losses, which may affect the taxes you pay as the Fund shareholder.

Authorized Participant Concentration Risk. To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to net asset value and may face delisting.

Cash Redemption Risk. The Fund may pay out of its redemption proceeds in cash rather than through the in-kind delivery of portfolio securities. The Fund may be required sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have incurred if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gains distributions than if the in-kind redemption process was used. Only certain institutional investors known as Authorized Participants who have entered into an agreement with the Fund's distributor may redeem shares from the Fund directly; all other investors buy and sell shares at market prices on an exchange.

Common Stock Risk. The stock (*i.e.*, equity) market can be volatile. Equity securities are susceptible to general market fluctuations, volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. The prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Cybersecurity Risk. There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund or its Service Providers to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund, or its Service Providers may adversely impact the Fund or its shareholders. Because information technology ("IT") systems and digital data underlie most of the Fund's operations, the Fund and its Service Providers are exposed to the risk that their operations and data may be compromised as a result of internal and external cyber-failures, breaches or attacks ("Cyber Risk"). This could occur as a result of malicious or criminal cyber-attacks. Cyber-attacks include actions taken to: (i) steal or corrupt data maintained online or digitally, (ii) gain unauthorized access to or release confidential information, (iii) shut down the Fund or Service Provider website through denial-of-service attacks, or (iv) otherwise disrupt normal business operations. However, events arising from human error, faulty or inadequately implemented policies and procedures or other systems failures unrelated to any external cyber-threat may have effects similar to those caused by deliberate cyber-attacks. See "Cybersecurity" below for additional risks related to potential cybersecurity breaches.

Derivatives Risk. The Fund may invest in derivatives, which are financial instruments whose value is typically based on the value of a security, index or other instrument. These instruments include futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments. Derivatives may also include customized baskets or options (which may incorporate other securities directly and also various derivatives including common stock, options, and futures) structured as agreed upon by a counterparty, as well as specially structured types of mortgage- and asset-backed securities whose value is often linked to commercial and residential mortgage portfolios. The Fund's use of derivative instruments involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments, and certain derivatives may create a risk of loss greater than the amount invested.

Investing for hedging purposes or to increase the Fund's return may result in certain additional transaction costs that may reduce the Fund's performance. When used for hedging purposes, no assurance can be given that each derivative position will achieve a perfect correlation with the investment against which it is being hedged. Because the markets for certain derivative instruments are relatively new, suitable derivatives transactions may not be available in all circumstances for risk management or other purposes and there can be no assurance that a particular derivative position will be available when sought by the Adviser or that such techniques will be utilized by the Adviser.

The market value of derivative instruments and securities may be more volatile than that of other instruments, and each type of derivative instrument may have its own special risks, including the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates, and indices. Many derivatives, in particular privately negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund. The value of derivatives may not correlate perfectly, or at all, with the value of the assets, reference rates or indices they are designed to closely track.

Derivatives are subject to a number of other risks, including liquidity risk (the possibility that the derivative may be difficult to purchase or sell and the Adviser may be unable to initiate a transaction or liquidate a position at an advantageous time or price), leverage risk (the possibility that adverse changes in the value or level of the underlying asset, reference rate or index can result in loss of an amount substantially greater than the amount invested in the derivative), interest rate risk (some derivatives are more sensitive to interest rate changes and market price fluctuations), and counterparty risk (the risk that a counterparty may be unable to perform according to a contract, and that any deterioration in a counterparty's creditworthiness could adversely affect the instrument). In addition, because derivative products are highly specialized, investment techniques and risk analyses employed with respect to investments in derivatives are different from those associated with stocks and bonds. Finally, the Fund's use of derivatives may cause the Fund to realize higher amounts of short-term capital gains (generally taxed at ordinary income tax rates) than if the Fund had not used such instruments. Derivative instruments are also subject to the risk that the market value of an instrument will change to the detriment of the Fund. If the Adviser inaccurately forecast the values of securities, currencies or interest rates or other economic factors in using derivatives, the Fund might have been in a better position if it had not entered into the transaction at all. Some strategies involving derivative instruments can reduce the risk of loss, but they can also reduce the opportunity for gain or result in losses by offsetting favorable price movements in other investments held by the Fund. The Fund may also have to buy or sell a security at a disadvantageous time or price because regulations require funds to maintain offsetting positions or asset coverage in connection with certain derivatives transactions.

The Fund may also purchase or write (sell) credit default swaps ("CDS") or credit default swap indexes ("CDX"), which are credit derivatives used to hedge credit risk and/or take a position on a basket of credit entities. Unlike a credit default swap, which is an over the counter derivative, a CDX may be exchange traded, or sold over the counter. Each CDX is designed to track a basket of credit entities, which may be standard or customized. This means that it may be more liquid than a credit default swap, and it may be cheaper to hedge the Fund's portfolio with a CDX than it would be to buy many single name credit default swaps to achieve a similar effect. The Fund may also purchase or sell total return swaps or invest in inverse ETFs to hedge its long positions. The Fund may also use derivative transactions to create investment leverage. For example, the Fund may use total return swaps or CDX to take indirect long or short positions on equity or fixed income indices, equity or fixed income securities, or currencies.

The SAI provides a more detailed description of the types of derivative instruments in which the Fund may invest and their associated risks.

ETF Structure Risks. The Fund is structured as an ETF and as a result is subject to special risks, including:

Not Individually Redeemable. Shares are not individually redeemable and may be redeemed by the Fund at net asset value only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.

Trading Issues. Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.

Market Price Variance Risk. The market prices of shares will fluctuate in response to changes in net asset value and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly and you may pay more than net asset value when buying shares on the secondary market, and you may receive less than net asset value when you sell those shares. This means that shares may trade at a discount to net asset value. If a shareholder purchases shares at a time when the market price is at a premium to the net asset value or sells shares at a time when the market price is at a discount to net asset value, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares. In times of market stress, such as what was experienced in 2020 with the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s net asset value. The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price. When all or a portion of an ETF’s underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value. In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

Fluctuation of Net Asset Value Risk. Unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified Index. The net asset value of the Fund’s shares will generally fluctuate with changes in the market value of the Fund’s holdings. The market prices of the shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for the shares on the Exchange. The Adviser cannot predict whether the shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund’s holdings trading individually or in the aggregate at any point in time. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the Shares will trade at premiums or discounts to net asset value.

Forward and Futures Contract Risk. The successful use of forward and futures contracts draws upon the Adviser’s or Sub-Adviser’s skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund’s net asset value and total return, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser’s or Sub-Adviser’s inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements or to meet margin increases required as a result of market conditions or periods of high volatility, and the Fund may have to sell securities at a time when it may be disadvantageous to do so. The Fund could be unable to recover assets held at the futures clearing broker, even assets directly traceable to the Fund from the futures clearing broker in the event of a bankruptcy of the broker. A futures clearing broker is required to segregate customer funds pursuant to the Commodities Exchange Act and the regulations of the U.S. Commodity Futures Trading Commission (“CFTC”). However, in the unlikely event of the broker’s bankruptcy, there is no equivalent of the Securities Investors Protection Corporation insurance as is applicable in the case of securities broker dealers’ bankruptcies.

Gap Risk. The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day’s closing price. For example, the price of a stock can drop from its closing price one night to its opening price the next morning. The difference between the two prices is the gap. Trading halts may lead to gap risk.

Geographic and Sector Risk. The risk that if the Fund or an Underlying Fund invests a significant portion of its total assets in certain issuers within the same geographic region or economic sector, an adverse economic, business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crises, affecting that region or sector may affect the value of the Fund’s or Underlying Fund’s investments more than if the Fund’s or Underlying Fund’s investments were not so focused. While the Fund or an Underlying Fund may not concentrate in any one industry, the Fund or an Underlying Fund may invest without limitation in a particular country or sector.

Hedging Transactions Risk. The Adviser may employ various hedging techniques. The success of the Fund’s hedging strategy will be subject to the Adviser’s ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Since the characteristics of many securities change as markets change or time passes, the success of the Fund’s hedging strategy will also be subject to the Adviser’s ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. Investing for hedging purposes or to increase the Fund’s return may result in certain additional transaction costs.

Hedging against a decline in the value of a portfolio position does not eliminate fluctuations in the values of those portfolio positions or prevent losses if the values of those positions decline. Rather, it establishes other positions designed to gain from those same declines, thus seeking to moderate the decline in the portfolio position's value. Such hedging transactions also limit the opportunity for gain if the value of the portfolio position should increase. For a variety of reasons, the Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs. The Adviser may determine, in its sole discretion, not to hedge against certain risks and certain risks may exist that cannot be hedged. Furthermore, the Adviser may not anticipate a particular risk so as to hedge against it effectively. Hedging transactions also limit the opportunity for gain if the value of a hedged portfolio position should increase.

Index Risk. If a derivative is linked to the performance of an index, it will be subject to the risks associated with changes in that index. If the index changes, the Fund could receive lower interest payments or experience a reduction in the value of the derivative to below what the Fund paid. Certain indexed securities, including inverse securities (which move in an opposite direction to the index), may create leverage, to the extent that they increase or decrease in value at a rate that is a multiple of the changes in the applicable index.

Investment Companies and Exchange-Traded Funds Risk. When the Fund invests in other investment companies, including ETFs, it will bear additional expenses based on its pro rata share of the other investment company's or ETF's operating expenses, including the management fees of the investment company or ETF in addition to those paid by the Fund. The risk of owning an investment company or ETF generally reflects the risks of owning the underlying investments the investment company or ETF holds. The Fund also will incur brokerage costs when it purchases and sells ETFs. The Fund may invest in inverse ETFs, which may result in increased volatility and will magnify the Fund's losses or gains. During periods of market volatility, inverse ETFs may not perform as expected.

Issuer-Specific Risk. The value of a specific security or option can be more volatile than the market as a whole and may perform worse than the market as a whole. The value of large cap securities, as represented by the S&P 500 Index, can be more volatile than smaller cap securities due to differing market reactions to adverse issuer, political, regulatory, market, or economic developments.

Leveraging Risk. The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund's other risks. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations, to meet additional margin requirements or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

LIBOR Risk. The Fund may invest in securities and other instruments whose interest payments are determined by references to the London Interbank Offered Rate ("LIBOR").

In 2017, the United Kingdom Financial Conduct Authority, which regulates LIBOR, announced it would cease its active encouragement of banks to provide the quotations needed to sustain LIBOR after 2021. ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publication of certain LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of the remaining LIBOR settings on a representative bases after June 30, 2023. The U.S. Federal Reserve has begun publishing Secured Overnight Financing Rate (SOFR), a broad measure of secured overnight U.S. Treasury repo rates, that is intended to replace U.S. dollar LIBOR. However, there is currently no definitive information regarding the future utilization of LIBOR or of any particular replacement rate. There are obstacles to converting certain longer term securities and transactions to a new benchmark and the effectiveness of one alternative reference rate versus multiple alternative reference rates in new or existing financial instruments and products has not been determined. In addition, it is expected that market participants will amend financial instruments referencing LIBOR to include fallback provisions and other measures that contemplate the discontinuation of LIBOR or other similar market disruption events, but neither the effect of the transition process nor the viability of such measures is known. As market participants transition away from LIBOR, LIBOR's usefulness may deteriorate. The transition process may lead to increased volatility and illiquidity in markets that currently rely on LIBOR to determine interest rates. The unavailability of LIBOR presents risks to the Fund, including the risk that any pricing or adjustments to the Fund's investments resulting from a substitute reference rate may adversely affect the Fund's performance and/or net asset value. It remains uncertain how such changes would be implemented and the effects such changes would have on the Fund, including any negative effects on the Fund's liquidity and valuation of the Fund's investments, issuers of instruments in which the Fund invests and financial markets generally.

Liquidity Risk. There is risk that the Fund may not be able to pay redemption proceeds within the time periods described in this Prospectus because of unusual market conditions, an unusually high volume of redemption requests, legal restrictions impairing its ability to sell particular securities or close derivative positions at an advantageous market price or other reasons. Certain portfolio securities may be less liquid than others, which may make them difficult or impossible to sell at the time and the price that the Fund would like or difficult to value. The Fund may have to lower the price, sell other securities instead or forgo an investment opportunity. In addition, less liquid securities may be more difficult to value and markets may become less liquid when there are fewer interested buyers or sellers or when dealers are unwilling or unable to make a market for certain securities. Recently, dealers have generally been less willing to make markets for fixed income securities. Any of these events could have a negative effect on fund management or performance. Funds with principal investment strategies that involve investments in securities of companies with smaller market capitalizations, foreign securities, Rule 144A securities, derivatives or securities with substantial market and/or credit risk tend to have the greatest exposure to liquidity risk. In the past, in stressed markets, certain types of securities suffered periods of illiquidity if disfavored by the market. All of these risks may increase during periods of market turmoil, such as that experienced in 2020 with COVID-19 and could have a negative effect on the Fund's performance.

Management Risk. The Fund's investment strategies may not result in an increase in the value of your investment in the Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. The net asset value of the Fund changes daily based on the performance of the securities and derivatives in which it invests. The Adviser's judgments about the attractiveness, value and potential appreciation of particular securities and derivatives in which the Fund invests may prove to be incorrect and may not produce the desired results. Additionally, the Adviser may have conflicts of interest that could interfere with its management of the Fund's portfolio. For example, the Adviser or its affiliates may manage other investment funds or have other clients that may be similar to, or overlap with, the investment objective and strategy of the Fund, creating potential conflicts of interest when making decisions regarding which investments may be appropriate for the Fund and other clients. Further information regarding conflicts of interest is available in the SAI.

Market Risk. Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, inflation, changes in interest rate levels, lack of liquidity in the bond or other markets, volatility in the securities markets, adverse investor sentiment affect the securities markets and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Equity securities generally have greater price volatility than fixed income securities, although under certain market conditions fixed income securities may have comparable or greater price volatility. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. Different sectors of the market and different security types may react differently to such developments. Changes in value may be temporary or may last for extended periods. The Fund may experience a substantial or complete loss on any individual security. Even when securities markets perform well, there is no assurance that the investments held by the Fund will increase in value along with the broader market. Market factors, such as the demand for particular portfolio securities, may cause the price of certain portfolio securities to fall while the prices of other securities rise or remain unchanged.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

Market Events Risk. There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, may take steps to support financial markets, including by keeping interest rates at historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve may also reduce market support activities. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also contribute to decreased liquidity and increased volatility in the financial markets. The impact of these influences on the markets, and the practical implications for market participants, may not be fully known for some time.

COVID-19 has resulted in travel restrictions, closed international borders, enhanced health screenings at ports of entry and elsewhere, disruption of and delays in healthcare service preparation and delivery, prolonged quarantines, cancellations, business and school closings, supply chain disruptions, and lower consumer demand, as well as general concern and uncertainty. The impact of COVID-19, and other infectious illness outbreaks that may arise in the future, could adversely affect the economies of many nations or the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen.

Preferred Stock Risk. Preferred stocks are securities that represent an ownership interest providing the holder with claims on the issuers earnings and assets before common stock owners but after bond owners. Preferred stocks are subject to the risk that the dividend on the stock may be changed or omitted by the issuer, and that participation in the growth of an issuer may be limited. Unlike most debt securities, the obligations of an issuer of preferred stock, including dividend and other payment obligations, typically may not be accelerated by the holders of such preferred stock on the occurrence of an event of default or other non-compliance by the issuer of the preferred stock.

New Fund Risk. The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

Regulatory Risk. Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of investment companies trading certain derivative instruments to regulation by the CFTC, including additional disclosure and operational obligations. The SEC recently adopted regulations that will subject activities of investment companies trading certain derivative instruments to additional regulation, which may increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

Sector Risk. The Fund may focus its investments in securities of a particular sector. Sector risk is the risk that if the Fund invests a significant portion of its total assets in issuers within the same economic sector, an adverse business or political development or natural or other event, including war, terrorism, natural and environmental disasters, epidemics, pandemics and other public health crises, affecting that region or sector may affect the value of the Fund's investments more than if the Fund's investments were not so focused. Economic, legislative or regulatory developments may occur that significantly affect an entire sector. This may cause the Fund's NAV to fluctuate more than that of a fund that does not focus in a particular sector. While the Fund may not concentrate in any one industry, the Fund may invest without limitation in a particular sector.

- *Communication Services Sector.* Companies in the communications services sector are subject to the risk that they will underperform the market as a whole due to legislative or regulatory changes, adverse market conditions, and/or increased competition.
- *Consumer Discretionary Sector.* The consumer discretionary sector may be adversely affected by changes in the worldwide economy, consumer spending, competition, demographics and consumer preference, exploration and production spending. In addition, the impact of any epidemic, pandemic or natural disaster, or widespread fear that such events may occur, could negatively affect the global economy and, in turn, negatively affect companies in the consumer discretionary sector. Recent examples include pandemic risks related to COVID-19 and aggressive measures taken worldwide in response by governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines of large populations, and by businesses, including changes to operations and reducing staff.
- *Consumer Staples Sector.* The consumer staples sector may be affected by the regulation of various product components and production methods, marketing campaigns and other factors affecting consumer demand.
- *Energy Sector.* Companies in the energy sector may be adversely affected by fluctuations in energy prices and supply and demand of energy fuels. Companies in the energy sector may need to make substantial expenditures, and to incur significant amounts of debt, in order to maintain or expand their reserves. The demand for oil and other energy commodities was adversely impacted by the COVID-19 pandemic. Future pandemics could lead to reduced production and price volatility.
- *Financials Sector.* Companies in the financials sector are often subject to extensive governmental regulation and the potential for additional regulation, which may adversely affect the scope of their activities, the prices they can charge, and the amounts of capital they must maintain.
- *Healthcare Sector.* The healthcare sector may be affected by government regulations and government healthcare programs, increases or decreases in the cost of medical products and services and product liability claims, among other factors. Healthcare companies are subject to competitive forces that may result in price discounting.
- *Industrials Sector.* The value of companies in the industrial sector may be adversely affected by supply and demand related to their specific products or services and industrial sector products in general. The products of manufacturing companies may face obsolescence due to rapid technological developments and the introduction of new products.

- *Information Technology Sector.* Information technology companies face intense competition and potentially rapid product obsolescence.
- *Materials Sector.* Companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, environmental policies, import controls, competition, availability of resources and labor relations.
- *Real Estate Sector.* Securities in the real estate sector are susceptible to the risks associated with the real estate industry in general. Real estate companies may have lower trading volumes and may be subject to more abrupt or erratic price movements than the overall securities markets. Certain investments in real estate-related investments were negatively affected by the COVID-19 pandemic. Potential impacts of pandemics on the real estate sector include lower occupancy rates, decreased lease payments, defaults, and foreclosures, among other consequences.
- *Utilities Sector.* The utilities sector is subject to significant government regulation and oversight. Companies in the utilities sector may be adversely affected due to increases in commodity and operating costs, rising costs of financing capital construction and the cost of complying with government regulations, among other factors. Deregulation may subject utility companies to greater competition and may adversely affect their profitability. As deregulation allows utility companies to diversify outside of their original geographic regions and their traditional lines of business, utility companies may engage in riskier ventures.

Securities Lending Risk. To realize additional income, the Fund may lend portfolio securities with a value of up to 33 1/3% of the total assets, including any collateral received from the loans. The Fund receives collateral equal to at least 102% of the market value for loans secured by government securities or cash in the same currency as the loaned shares and 105% for all other loaned securities at each loan's inception. The collateral the Fund receives will generally take the form of cash, U.S. Government securities, letters of credit, or other collateral as deemed appropriate by the Adviser. The Fund may use any cash collateral it receives to invest in short-term investments, including money market funds. It is the Trust's policy to obtain additional collateral from or return excess collateral to the borrower by the end of the next business day. Therefore, from time to time the value of the collateral received by the Fund may be less than the value of the securities on loan. The Fund will receive income earned on the securities loaned during the lending period and a portion of the interest or rebate earned on the collateral received. The risks associated with lending portfolio securities, as with other extensions of secured credit, include, but are not limited to, possible delays in receiving additional collateral or in the recovery of the securities loaned, possible loss of rights in the collateral should the borrower fail financially, as well as risk of loss in the value of the collateral or the value of the investments made with the collateral. In certain market conditions, the portion of the Fund's securities on loan may be significant and may magnify the risk of such a loss or delay.

Swap Risk. Swap agreements are subject to the risk that the counterparty to the swap will default on its obligation to pay the Fund and the risk that the Fund will not be able to meet its obligations to pay the counterparty to the swap. In addition, there is the risk that a swap may be terminated by the Fund or the counterparty in accordance with its terms. If a swap were to terminate, the Fund may be unable to implement its investment strategies and the Fund may not be able to seek to achieve its investment objective.

- *Credit Default Swaps Risk.* A credit default swap enables an investor to buy or sell protection against a credit event with respect to an issuer. Credit default swaps involve risks because they are difficult to value, are highly susceptible to liquidity and credit risk, and generally pay a return to the party that has paid the premium only in the event of an actual default by the issuer of the underlying obligation (as opposed to a credit downgrade or other indication of financial difficulty). The Fund bears the loss of the amount expected to be received under a swap agreement in the event of the default or bankruptcy of a swap agreement counterparty.
- *Total Return Swaps Risk.* A total return swap is a contract in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security, basket of securities, or securities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total return swap agreements may be used to obtain exposure to a security or market without owning or taking physical custody of such security or investing directly in such market. Total return swap agreements may effectively add leverage to the Fund's portfolio because, in addition to its total net assets, the Fund would be subject to investment exposure on the notional amount of the swap. The primary risks associated with total returns swaps are credit risks (if the counterparty fails to meet its obligations) and market risk (if there is no liquid market for the agreement or unfavorable changes occur to the underlying asset).

Valuation Risk. The sale price the Fund could receive for a security may differ from the Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets, or that are valued using a fair value methodology. Because portfolio securities of the Fund may be traded on non-U.S. exchanges, and non-U.S. exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.

Volatility Risk. The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to events or factors that affect markets generally or that affect a particular investment, industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

PORTFOLIO HOLDINGS DISCLOSURE: A description of the Fund's policies and procedures regarding the release of portfolio holdings information is available in the Fund's SAI). Shareholders may request portfolio holdings schedules at no charge by calling 1-866-866-4848.

CYBERSECURITY: The computer systems, networks and devices used by the Fund and its Service Providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its Service Providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its net asset value; impediments to trading; the inability of the Fund, the Adviser, and other Service Providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and Service Providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

Changes of Investment Policies

In accordance with Rule 35d-1 under the 1940 Act, the Fund adopted a non-fundamental investment policy that it will, under normal market conditions, invest at least 80% of its net assets, including any borrowings for investment purposes, in a diversified portfolio of ETFs that each invest at least 80% of their assets in U.S. equity securities. This requirement is applied at the time of investment. The 80% investment policy of the Fund may be changed at any time by the Board of Trustees. Shareholders will be given written notice at least 60 days prior to any change by the Fund of its 80% investment policy.

MANAGEMENT

INVESTMENT ADVISER

Regents Park Funds, LLC, located at 4041 MacArthur Boulevard, Suite 155, Newport Beach, CA 92660, serves as the investment adviser to the Fund. Subject to the authority of the Board of Trustees, the Adviser is responsible for the overall management of the Fund's business affairs pursuant to an Advisory Agreement between Funds and the Adviser. Regents Park was founded in May, 2016 and as of October 31 2021, the Adviser had approximately \$380 million in assets under management. Anfield Group, LLC ("Anfield Group"), which is wholly owned by the David Young and Sandra G. Glain Family Trust, wholly owns Regents Park. For the fiscal year ended October 31, 2021, the aggregate fee paid to the Fund's investment adviser was 0.81% of the Fund's average daily net assets.

Subject to the supervision of the Board of Trustees, the Adviser is responsible for managing the Fund's day-to-day operations; including selecting the overall investment strategies of the Fund; monitoring and evaluating investment sub-adviser performance; and providing related administrative services and facilities under an Investment Advisory Agreement between the Fund and the Adviser. The Adviser has the ultimate responsibility to oversee any investment sub-advisers, and to recommend their hiring, termination and replacement, subject to approval of the Trust's Board of Trustees.

The management fee set forth in the Investment Advisory Agreement with respect to the Fund is 0.80% annually, to be paid on a monthly basis. In addition to investment advisory fees the Fund pays other expenses including costs incurred in connection with the maintenance of securities law registration, printing and mailing prospectuses and Statements of Additional Information to shareholders, certain financial accounting services, taxes or governmental fees, custodial, transfer and shareholder servicing agent costs, expenses of outside counsel and independent accountants, preparation of shareholder reports and expenses of trustee and shareholders meetings.

The Adviser has contractually agreed to reduce its fees and/or absorb expenses of the Fund, through February 28, 2023, to ensure that total annual fund operating expenses after fee waiver and/or reimbursement (exclusive of any front-end or contingent deferred loads, taxes, brokerage fees and commissions, borrowing costs (such as interest and dividend expense on securities sold short), acquired fund fees and expenses, fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example option and swap fees and expenses), or extraordinary expenses such as litigation) will not exceed 1.50% of the Fund's average daily net assets; subject to possible recoupment from the Fund in future years within the three years after the fees have been waived or reimbursed if such recoupment can be achieved within the foregoing expense limits or the expense limits in place at the time of the recoupment. Fee waiver and reimbursement arrangements can decrease the Fund's expenses and boost its performance. A discussion regarding the basis for the Board of Trustees' approval of the advisory agreement is available in the Fund's semi-annual report to shareholders dated April 30, 2021.

INVESTMENT SUB-ADVISER

Anfield Capital Management, LLC, located at 4041 MacArthur Boulevard, Suite 155, Newport Beach, CA 92660, serves as Sub-Adviser to the Fund. The Sub-Adviser was formed in 2009 and currently manages assets for private investors, financial intermediaries, and institutional clients. As of October 31, 2021, it had approximately \$1.98 billion in assets under management. Anfield Group owns a 92% majority interest in Anfield. The Sub-Adviser is an affiliate of the Adviser. The Sub-Adviser is paid by the Adviser, not the Fund.

PORTFOLIO MANAGERS

Peter van de Zilver, CFA Portfolio Manager, Risk Management

Mr. van de Zilver has served as Head of Portfolio Manager Analytics and Risk Management at the Adviser since 2012. Mr. van de Zilver has over 20 years of investment management experience and retired in 2010 from a senior position in PIMCO's Portfolio Analytics group, where he was responsible for the architecture, development and implementation of many of PIMCO's analytics and risk management systems. Mr. van de Zilver holds a Chartered Financial Analyst (CFA) designation.

David Young, CFA Portfolio Manager, Global Strategy

Mr. Young has served as Chief Executive Officer at the Adviser since 2009, and as Chief Investment Officer from 2009 through 2012. Mr. Young has over 25 years of investment management experience and retired at the end of 2008 from his position as Executive Vice President and Account Manager with PIMCO, where he was responsible for contributing to the firm's global macroeconomic view and investment strategy, and building the business in the UK, Europe and the Middle East. Mr. Young holds a Chartered Financial Analyst (CFA) designation.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed by the Portfolio Managers, and the Portfolio Managers' ownership of securities in the Fund.

DETERMINATION OF NET ASSET VALUE

The net asset value ("NAV") of the Fund's shares is determined at the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern Time) on each day the New York Stock Exchange ("NYSE") is open. NAV is computed by determining, the aggregate market value of all assets of the Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The NYSE is closed on weekends and New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV takes into account the expenses and fees of the Fund, including management, administration, and distribution fees, which are accrued daily.

Generally, the Fund's securities are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined using the “fair value” procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has delegated execution of these procedures to a fair value team composed of one or more representatives from each of the (i) Trust, (ii) administrator, and (iii) Adviser. The team may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and considers the determinations reached by the fair value committee in ratifying the fair value committee’s application of the fair valuation methodologies employed.

The Fund may use independent pricing services to assist in calculating the value of the Fund’s securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Fund. Because the Fund may invest in securities primarily listed on foreign exchanges, and these exchanges may trade on weekends or other days when the Fund does not price its shares, the value of some of the Fund’s portfolio securities may change on days when authorized participants (“APs”) may not be able to purchase or redeem Fund shares.

In computing the NAV, the Fund values foreign securities held by the Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the NYSE. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in the Fund’s portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, the Adviser may need to price the security using the Fund’s fair value pricing guidelines. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other funds to determine NAV, or from the price that may be realized upon the actual sale of the security.

With respect to any portion of the Fund’s assets that are invested in one or more open-end management investment companies registered under the 1940 Act, the Fund’s NAV is calculated based upon the NAV of those open-end management investment companies, and the prospectuses for these companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

Premium/Discount Information

Most investors will buy and sell shares of the Fund in secondary market transactions through brokers at market prices and the Fund’s shares will trade at market prices. The market price of shares of the Fund may be greater than, equal to, or less than NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of shares of the Fund.

Information regarding the intraday value of shares of the Fund, also known as the “indicative optimized portfolio value” (“IOPV”), may, but is not required to, be disseminated every 15 seconds throughout each trading day by the securities exchange on which the Fund’s shares are listed or by market data vendors or other information providers. The IOPV is based on the current market value of the Fund’s securities, including cash required to be deposited in exchange for a Creation Unit. The IOPV is generally determined by using both current market quotations and price quotations obtained from broker-dealers and other market intermediaries that may trade in the Fund’s portfolio securities. The IOPV may not reflect the exact composition of the Fund’s current portfolio of securities at a particular point in time or the best possible valuation of the Fund’s current portfolio. As a result, the IOPV should not be confused with the NAV, which is computed only once a day.

Information regarding how often the shares of the Fund traded at a price above (at a premium to) or below (at a discount to) the NAV of the Fund during the past four calendar quarters, when available, can be found at www.RegentsParkFunds.com.

HOW TO BUY AND SELL SHARES

Shares of the Fund are listed for trading on Cboe BZX Exchange, Inc. Shares of the Fund will be listed under the symbols AESR. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares, and shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

APs may acquire shares directly from the Fund, and APs may tender their shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units, of 25,000 shares. Purchases and redemptions directly from the Fund must follow the Fund’s procedures, which are described in the SAI.

The Fund may liquidate and terminate at any time without shareholder approval.

Share Trading Prices

The approximate value of shares of the Fund, an amount representing on a per share basis the sum of the current market price of the securities accepted by the Fund in exchange for shares of the Fund and an estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a “real-time” update of the NAV per share of the Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Fund is not involved in, or responsible for, the calculation or dissemination of the approximate value of the shares, and the Fund does not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding shares of the Fund and is recognized as the owner of all shares for all purposes.

Investors owning shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of shares, you are not entitled to receive physical delivery of stock certificates or to have shares registered in your name, and you are not considered a registered owner of shares. Therefore, to exercise any right as an owner of shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

The Fund’s shares can only be purchased and redeemed directly from the Fund in Creation Units by APs, and the vast majority of trading in the Fund’s shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund’s trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund’s ability to achieve its investment objective. However, direct trading by APs is critical to ensuring that the Fund’s shares trade at or close to NAV. The Fund also employs fair valuation pricing to minimize potential dilution from market timing. In addition, the Fund imposes transaction fees on purchases and redemptions of Fund shares to cover the custodial and other costs incurred by the Fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund’s trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the Fund’s shares.

DISTRIBUTION AND SERVICE PLAN

The Fund has adopted a distribution and service plan (“Plan”) pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Fund is authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services (“Service Providers”). If a Service Provider provides these services, the Fund may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Fund, and there are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Fund.

Additional Compensation to Financial Intermediaries: Northern Lights Distributors, LLC, the Fund’s distributor, its affiliates, and the Fund’s Adviser or Sub-Adviser or their affiliates may, at their own expense and out of their own legitimate profits, provide additional cash payments to financial intermediaries who sell shares of the Fund, including affiliates of the Adviser or Sub-Adviser. Financial intermediaries include brokers, financial planners, banks, insurance companies, retirement or 401(k) plan administrators and others. These payments may be in addition to any Rule 12b-1 fees that the Fund could charge pursuant to a Rule 12b-1 plan and any sales charges that are disclosed elsewhere in this Prospectus. These payments are generally made to financial intermediaries that provide shareholder or administrative services, or marketing support. Marketing support may include access to sales meetings, sales representatives and financial intermediary management representatives, inclusion of the Fund on a sales list, including a preferred or select sales list, or other sales programs. These payments also may be made as an expense reimbursement in cases where the financial intermediary provides shareholder services to Fund shareholders.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Unlike interests in conventional mutual funds, which typically are bought and sold from and to the fund only at closing NAVs, the Fund's shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day's next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the Fund's portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the shares' in-kind redemption mechanism generally will not lead to a tax event for the Fund or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid quarterly by the Fund. The Fund distributes its net realized capital gains, if any, to shareholders annually.

Distributions in cash may be reinvested automatically in additional whole shares only if the broker through whom you purchased shares makes such option available.

Taxes

As with any investment, you should consider how your investment in shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in shares.

Unless your investment in shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- The Fund makes distributions,
- You sell your shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

As stated above, dividends from net investment income, if any, ordinarily are declared and paid quarterly by the Fund. The Fund may also pay a special distribution at the end of a calendar year to comply with federal tax requirements. Distributions from the Fund's net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that the Fund's dividends attributable to its "qualified dividend income" (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Fund shares at the rate for net capital gain -- a maximum of 20%. In addition, a 3.8% Medicare tax may also apply. A part of the Fund's dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to federal income tax (excluding real estate investment trusts) and excludes dividends from foreign corporations -- subject to similar restrictions.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund (if that option is available). Distributions reinvested in additional shares of the Fund through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the shares.

Distributions in excess of the Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of (and in reduction of) your basis in the shares and as capital gain thereafter. A distribution will reduce the Fund's NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, the Fund is required to withhold 24% of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of shares is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less. The ability to deduct capital losses from sales of shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An AP who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component (as defined in the SAI) it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the shares being redeemed and the value of the securities. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the shares have been held for more than one year and as short-term capital gain or loss if the shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many shares you purchased or sold and at what price. See "Tax Status" in the SAI for a description of the requirement regarding basis determination methods applicable to Share redemptions and the Fund's obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the shares under all applicable tax laws. See "TAX STATUS" in the SAI for more information.

FUND SERVICE PROVIDERS

Ultimus Fund Solutions, LLC is the Fund's administrator and fund accountant. It has its principal office at 80 Arkay Drive, Suite 110, Hauppauge, NY 11788, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. It is an affiliate of the Distributor.

Brown Brothers Harriman & Co. ("BBH"), 50 Post Office Square, Boston, MA 02110, is the Fund's custodian and transfer agent.

Northern Lights Distributors, LLC (the "Distributor"), 4221 North 203rd Street, Suite 100, Elkhorn, NE 68022, is the distributor for the shares of the Fund. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Blank Rome LLP, 1271 Avenue of the Americas, New York, NY 10023, serves as legal counsel to the Trust.

RSM US LLP ("RSM"), 555 17th Street, Suite 1000, Denver, CO 80202 serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

OTHER INFORMATION

Investment by Other Investment Companies

For purposes of the 1940 Act, the Fund is a registered investment company, and the acquisition of the Fund's shares by other investment companies is subject to the restrictions of Section 12(d)(1) thereof. Rule 12d1-4 under the 1940 Act allows a registered investment company to invest in Fund shares beyond the limits of Section 12(d)(1) subject to certain conditions, including that a registered investment company enters into an Investment Agreement with the Trust regarding the terms of the investment. Any investment company considering purchasing shares of the Fund in amounts that would cause it to exceed the restrictions of Section 12(d)(1) should contact the Fund.

Continuous Offering

The method by which Creation Units of shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent shares and sells the shares directly to customers or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the shares that are part of an over-allotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Householding: To reduce expenses, the Fund mails only one copy of the prospectus and each annual and semi-annual report (or, if applicable, each notice of electronic accessibility thereof) to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please call the Fund at 1-866-866-4848 on days the Fund is open for business or contact your financial institution. The Fund will begin sending you individual copies thirty days after receiving your request.

FINANCIAL HIGHLIGHTS

The financial highlights tables are intended to help you understand the Fund's financial performance for the period of the Fund's operations. Certain information reflects financial results for a single Fund share. The total returns in the tables represent the rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment if all dividends and distributions). This information for the Fund has been derived from the financial statements audited by RSM US LLP, whose report, along with the Fund's financial statements, are included in the Fund's October 31, 2021 annual report, which is available upon request and is incorporated by reference in the SAI.

Per Share Data and Ratios for a Share of Beneficial Interest Outstanding Throughout each Period Presented

	For the Year Ended October 31, 2021	For the Period Ended October 31, 2020^(a)
Net asset value, beginning of year/period	\$ 10.59	\$ 10.00
Activity from investment operations:		
Net investment income ^(b)	0.02	0.01
Net realized and unrealized gain on investments	4.09	0.61
Total from investment operations	4.11	0.62
Less distributions from:		
Net investment income	(0.04)	(0.03)
Net realized gains	(0.08)	—
Total distributions	(0.12)	(0.03)
Net asset value, end of year/period	\$ 14.58	\$ 10.59
Market price, end of year/period	\$ 14.57	\$ 10.61
Total return ^{(c)(d)}	39.14%	6.26% ^{(j)(k)}
Market Price Total return	38.78%	6.46% ^(k)
Net assets, end of year/period (000s)	\$ 121,352	\$ 44,230
Ratio of gross expenses to average net assets ^{(e)(f)}	1.00%	1.33% ^(l)
Ratio of net expenses to average net assets ^{(f)(g)}	1.01%	1.30% ^(l)
Ratio of net investment income to average net assets ^(h)	0.12%	0.13% ^(l)
Portfolio Turnover Rate ⁽ⁱ⁾	31%	19% ^(k)

(a) The Anfield U.S. Equity Sector Rotation ETF shares commenced operations on December 16, 2019.

(b) Per share amounts calculated using the average shares method, which more appropriately presents the per share data for the period.

(c) Total return is calculated assuming a purchase of shares at net asset value on the first day and a sale at net asset value on the last day of the period. Distributions are assumed, for the purpose of this calculation, to be reinvested at the ex-dividend date net asset value per share on their respective payment dates. Total return would have been lower absent fee waiver/expense reimbursement or recapture, respectively.

(d) Includes adjustments in accordance with accounting principles generally accepted in the United States and, consequently, the net asset value for financial reporting purposes and the returns based upon those net asset values may differ from the net asset values and returns for shareholder transactions.

(e) Represents the ratio of expenses to average net assets absent fee waivers and/or expense reimbursements/recapture by the Adviser.

(f) Does not include the expenses of other investment companies in with the Fund invests.

(g) Represents the ratio of expenses to average net assets inclusive of fee waivers and/or expense reimbursements/recapture by the Advisor.

(h) Recognition of net investment income by the Fund is affected by the timing of the declaration of dividends by the underlying investment companies in which the Fund invests.

(i) Portfolio turnover rate excludes securities received or delivered from in-kind transactions.

(j) Represents total return based on net asset values per share from commencement of investment operations on December 16, 2019 through October 31, 2020.

(k) Not annualized.

(l) Annualized.

FACTS

WHAT DOES TWO ROADS SHARED TRUST DO WITH YOUR PERSONAL INFORMATION

Why?

Financial companies choose how they share your personal information. Federal law gives consumers the right to limit some but not all sharing. Federal law also requires us to tell you how we collect, share, and protect your personal information. Please read this notice carefully to understand what we do.

What?

THE TYPES OF PERSONAL INFORMATION WE COLLECT AND SHARE DEPENDS ON THE PRODUCT OR SERVICE THAT YOU HAVE WITH US.

THIS INFORMATION CAN INCLUDE:

- Social Security number and income
- Account transactions and transaction history
- Investment experience and purchase history

When you are *no longer* our customer, we continue to share your information as described in this notice.

How?

All financial companies need to share customers’ personal information to run their everyday business. In the section below, we list the reasons financial companies can share their customers’ personal information; the reason Two Roads Shared Trust chooses to share and whether you can limit this sharing.

Reasons we can share your personal information	Does Two Roads Shared Trust share?	Can you limit this sharing?
For our everyday business purposes – such as to process your transactions, maintain your account(s), respond to court orders and legal investigations, or report to credit bureaus	YES	NO
