FUND SUMMARY- Anfield Diversified Alternatives ETF

Investment Objective: Anfield Diversified Alternatives ETF (the “Fund”) seeks to provide capital growth and income.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund (“Shares”). **Investors purchasing or selling shares of the Fund in the secondary market may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.** These costs are not included in the expense example below.

Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>	
Management Fees	0.80%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.33%
Acquired Fund Fees and Expenses ⁽¹⁾	1.79%
Total Annual Fund Operating Expenses⁽²⁾	2.92%

(1) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies.

(2) The operating expenses in this fee table do not correlate to the expense ratios in the Financial Highlights because the expense ratios in the Financial Highlights do not reflect Acquired Fund Fees and Expenses.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same (except that the Example incorporates any applicable fee waiver and/or expense limitation agreements for only the first year). Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years	5 Years	10 Years
\$295	\$904	\$1,538	\$3,242

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund Shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. For the fiscal year ended April 30, 2023, the Fund’s portfolio turnover rate was 23%.

Principal Investment Strategies: The Fund is an actively managed exchange traded fund (“ETF”) that is a fund of funds. It seeks to achieve its investment objective by investing primarily in alternative asset classes and securities that represent sectors, market segments or asset classes that do not represent the general investment universe. The Fund will implement this strategy primarily through investments in unaffiliated ETFs, closed-end funds (“CEFs”), business development companies (“BDCs”) and real estate investment trusts (“REITs”). The market segments and sectors represented in these securities will typically have a lower correlation to the general equity and fixed income markets and whose performance and volatility is affected by factors different from those that determine the general direction of the equity and fixed income markets. These alternative sectors and asset class categories are (i) frontier technology companies at the forefront of major technical innovations in computing, medical sciences and nano-technology, (ii) companies in newly opened or frontier markets or involved in infrastructure development and resource exploitation, (iii) traditional alternatives such as private equity, private debt, and hedge funds, (iv) long and short positions (including leveraged positions) in stocks, bonds, cash, and derivatives (futures, options, and forward contracts) on individual securities and indices, (v) energy, and commodity related securities, (vi) long and short volatility strategies, (vii) multi-asset / market neutral, and (viii) absolute return / macro & event driven. The equity securities in which the Fund invests will be both domestic and foreign (including emerging markets) and of any market capitalization. The Fund may also invest in convertible and preferred securities. The Fund’s indirect investments in derivatives will be used for both hedging purposes and opportunistically for investment purposes to gain exposure to various market segments.

Anfield Capital Management, LLC (the “Sub-Adviser”) selects potential investments based on its ongoing analysis of available opportunities. Of primary consideration are the potential for growth and an estimation of the risks involved in achieving these goals. The Sub-Adviser analyzes the Fund’s goals, portfolio composition, volatility, risk exposures and historical returns, using data from multiple sources, combined with a proprietary quantitative methodology with the goal of finding the correct balance between potential risk and return. The analysis considers multiple factors (overall economic conditions, fundamental financial criteria, valuation considerations as well as market and technical analysis). The Sub-Adviser expects that the Fund will generally hold 20-40 positions, although total holdings are dependent on market conditions, the Sub-Adviser’s market views, and other factors. Positions are weighted on a risk-adjusted basis, defined as each position’s marginal contribution to risk, (*i.e.*, the average standard deviation of a position’s price movement adjusted for correlations with other positions in the portfolio). As a result of this risk-adjusted weighting process, positions with higher standard deviations may receive lower weights than those with lower standard deviations.

Principal Investment Risks: As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other investments. Many factors affect the Fund's net asset value and performance. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors.

The following describes the risks the Fund bears directly or indirectly through investments in investment companies, including ETFs and closed-end funds ("Underlying Funds"). As with any fund, there is no guarantee that the Fund will achieve its goal.

Market Risk: Overall market risk may affect the value of individual instruments in which the Fund or an Underlying Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, changes in interest rate levels, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats, lack of liquidity in the bond or other markets, volatility in the equities or other securities markets or adverse investor sentiment and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. A change in financial condition or other event affecting a single issuer or market may adversely impact securities markets as a whole. Rates of inflation have recently risen. The value of assets or income from an investment may be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Fund's assets can decline as can the value of the Fund's distributions. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

Market Events Risk: There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by lowering interest rates to historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve have recently reduced market support activities, including by beginning to increase interest rates. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also contribute to decreased liquidity and increased volatility in the financial markets. The impact of these influences on the markets, and the practical implications for market participants, may not be fully known for some time.

ETF Structure Risks: The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable.* Shares are not individually redeemable and may be redeemed by the Fund at net asset value ("NAV") only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues.* Trading in shares on the CBOE BZX Exchange, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.

- *Market Price Variance Risk:* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount or premium to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares.
 - In times of market stress, such as what was experienced in 2020 with the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s NAV.
 - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s NAV, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - When all or a portion of an ETF’s underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s NAV.
 - In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s NAV.

Management Risk: The Fund’s investment strategies may not result in an increase of the value of your investment in the Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. The Sub-Adviser determines the intrinsic value of the securities the Fund holds and its assessment may be incorrect, which may result in a decline in the value of Fund shares and failure to achieve its investment objective. The Fund’s portfolio managers use qualitative analyses and/or models. Any imperfections or limitations in such analyses and models could affect the ability of the portfolio managers to implement strategies.

Investment Companies and Exchange-Traded Funds Risks: When the Fund invests in another investment company, including an ETF and a closed-end fund, it will bear additional expenses based on its pro rata share of such other investment company’s operating expenses, including management fees, in addition to those paid by the Fund. The risk of owning an investment company (including an ETF or a closed-end fund) generally reflects the risks of owning the underlying investments held by such investment company. The Fund will also incur brokerage costs when it purchases and sells closed-end funds and ETFs. The Fund may invest in inverse ETFs, which may result in increased volatility and will magnify the Fund’s losses or gains. During periods of market volatility, inverse ETFs may not perform as expected.

Underlying Fund Risk: The risk that the Fund’s investment performance and its ability to achieve its investment objective are directly related to the performance of the Underlying Funds in which it invests. There can be no assurance that the Fund’s investments in the Underlying Funds will achieve their respective investment objectives. The Fund is subject to the risks of the Underlying Funds in direct proportion to the allocation of its assets among the Underlying Funds. Additionally, the Fund will be indirectly exposed to the risks of the portfolio assets held by an Underlying Fund in which the Fund invests, including, but not limited to, those of equity options, derivatives, currencies, index, leverage, and replication management. In addition, the Underlying Funds in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other mutual funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks, but the Sub-Adviser expects the principal investment risks of such Underlying Funds will be similar to the risks of investing in the Fund. Closed-end funds may also trade at a discount or premium to their NAV and may trade at a larger discount or smaller premium subsequent to purchase by the Fund.

Authorized Participant Concentration Risk: To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to NAV and may face delisting.

BDC Risk: BDCs have little or no operating history and may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their NAV. A significant portion of a BDC’s investments are recorded at fair value as determined by its board of directors, which may create uncertainty as to the value of the BDC’s investments. Non-traded BDCs are illiquid and it may not be possible to redeem shares or to do so without paying a substantial penalty. Publicly-traded BDCs usually trade at a discount to their NAV because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest, and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC.

Closed End Fund Risk: The Fund invests in closed end investment companies or funds. The shares of many closed end funds, after their initial public offering, frequently trade at a price per share that is less than the net asset value per share, the difference representing the “market discount” of such shares. This market discount may be due in part to the investment objective of long-term appreciation, which is sought by many closed end funds, as well as to the fact that the shares of closed end funds are not redeemable by the holder upon demand to the issuer at the next determined net asset value, but rather, are subject to supply and demand in the secondary market. A relative lack of secondary market purchasers of closed end fund shares also may contribute to such shares trading at a discount to their net asset value.

The Fund may invest in shares of closed end funds that are trading at a discount to net asset value or at a premium to net asset value. There can be no assurance that the market discount on shares of any closed end fund purchased by the Fund will ever decrease. In fact, it is possible that this market discount may increase and the Fund may suffer realized or unrealized capital losses due to further decline in the market price of the securities of such closed end funds, thereby adversely affecting the net asset value of the Fund’s shares. Similarly, there can be no assurance that any shares of a closed end fund purchased by the Fund at a premium will continue to trade at a premium or that the premium will not decrease subsequent to a purchase of such shares by the Fund.

Closed end funds may issue senior securities (including preferred stock and debt obligations) for the purpose of leveraging the closed end fund’s common shares in an attempt to enhance the current return to such closed end fund’s common shareholders. The Fund’s investment in the common shares of closed end funds that are financially leveraged may create an opportunity for greater total return on its investment, but at the same time may be expected to exhibit more volatility in market price and net asset value than an investment in shares of investment companies without a leveraged capital structure.

Commodity Risk: Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodity prices may be influenced by changes in overall market movements, commodity index volatility, changes in interest rates, or factors affecting a particular industry or commodity, such as unfavorable weather, animal and plant disease, geologic and environmental factors as well as changes in government regulation such as tariffs, embargoes or burdensome production rules and restrictions and international economic, political and regulatory developments. The prices of energy, industrial metals, precious metals, agriculture and livestock sector commodities may fluctuate widely due to factors such as changes in value, supply and demand and governmental regulatory policies. The commodity-linked securities in which the Fund invests may be issued by companies in the financial services sector, including the banking, brokerage and insurance sectors. As a result, events affecting issuers in the financial services sector may cause the Fund’s share value to fluctuate.

Common Stock Risk: The stock (*i.e.*, equity) market can be volatile. Equity securities are susceptible to general market fluctuations, volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. The prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Convertible Securities Risk: Convertible securities are hybrid securities that have characteristics of both fixed income and equity securities and are subject to risks associated with both fixed income and equity securities.

Cybersecurity Risk: There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, an Underlying Fund, the investment adviser, investment sub-adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries (collectively “Service Providers”) to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.

Derivatives Risk: The derivative instruments in which the Fund may invest may be more volatile than other instruments and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include leverage, liquidity, interest rate, market, credit and management risks, counterparty risk, mispricing or improper valuation. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. Changes in the market value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other more traditional investments, and certain derivatives may create a risk of loss greater than the amount invested.

Emerging Markets Risk: Investing in emerging markets involves not only the risks described below with respect to investing in foreign securities, but also other risks, including exposure to economic structures that are generally less diverse and mature, and to political systems that can be expected to have less stability, than those of developed countries. The typically small size of the markets of securities of issuers located in emerging markets and the possibility of a low or nonexistent volume of trading in those securities may also result in a lack of liquidity and in price volatility of those securities. Emerging markets are riskier than more developed markets because they tend to develop unevenly and may never fully develop. Investments in emerging markets may be considered speculative and share the risks of foreign developed markets but to a greater extent. Emerging markets are more likely to experience hyperinflation and currency devaluations, which adversely affect returns to U.S. investors. The legal remedies for investors in emerging markets may be more limited than the remedies available in the U.S., and the ability of U.S. authorities (e.g., SEC and the U.S. Department of Justice) to bring actions against bad actors may be limited.

Frontier market countries generally have smaller economies or less developed capital markets than traditional emerging markets and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries. The economies of frontier market countries are less correlated to global economic cycles than those of their more developed counterparts and their markets have low trading volumes and the potential for extreme price volatility and illiquidity.

Energy Risks: The performance of the Fund may be affected by developments in the energy sector, such as the possibility that government regulation will negatively impact companies in this sector. The demand for oil and other energy commodities was adversely impacted by the COVID-19 pandemic. Future pandemics could lead to reduced production and price volatility. Energy infrastructure entities are subject to the risks specific to the industry they serve including, but not limited to, the following:

- Fluctuations in commodity prices;
- Reduced volumes of natural gas or other energy commodities available for transporting, processing, storing, delivering or distributing;
- New construction risk and acquisition risk which can limit potential growth;
- A sustained reduced demand for crude oil, natural gas and refined petroleum products resulting from a recession or an increase in market price or higher taxes;
- Depletion of the natural gas reserves or other commodities if not replaced;
- Changes in the regulatory environment;
- Extreme weather;
- Rising interest rates which could result in a higher cost of capital and drive investors into other investment opportunities; and
- Threats of attack by terrorists.

Financial Sector Risk: The financial sector can be significantly affected by changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, the availability and cost of capital, and the impact of more stringent capital requirements. The Fund may be adversely affected by events or developments negatively impacting the financial sector.

Fixed Income Securities Risk: Fixed income securities are subject to interest rate risk, call risk, prepayment and extension risk, credit risk, duration risk, and liquidity risk. In addition, current market conditions may pose heightened risks for fixed income securities. When the Fund invests in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund. In general, the market price of fixed income securities with longer maturities or durations will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments).

These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments. Moreover, new regulations applicable to and changing business practices of financial intermediaries that make markets in fixed income securities have resulted in less market making activity for certain fixed income securities, which has reduced the liquidity and may increase the volatility for such fixed income securities. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity may decline unpredictably in response to overall economic conditions or credit tightening. For example, a general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities and could also result in increased redemptions for the Fund. Duration risk arises when holding long duration and long maturity investments, which will magnify certain risks, including interest rate risk and credit risk. Longer-term securities may be more sensitive to interest rate changes. Given the recent, historically low interest rates and the potential for increases in those rates, a heightened risk is posed by rising interest rates to longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security's price. If rates drop significantly, effective duration may tend to overstate the rise in a security's price.

Fluctuation of Net Asset Value Risk: The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Sub- Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the Shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. In addition, unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the Shares will trade at premiums or discounts to NAV.

Foreign (Non-U.S.) Investment Risk: Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies, due to less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political changes or diplomatic developments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers.

Forward and Futures Risk: The Fund's investments in forwards and futures through its underlying investments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) leverage risk (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the futures contract may not correlate perfectly with the underlying index. Investments in forwards and futures involve leverage, which means a small percentage of assets invested in forwards and futures can have a disproportionately large impact on the Fund. This risk could cause the Fund to lose more than the principal amount invested. Forward and futures contracts may become mispriced or improperly valued when compared to the adviser's expectation and may not produce the desired investment results. Additionally, changes in the value of forward and futures contracts may not track or correlate perfectly with the underlying index because of temporary, or even long-term, supply and demand imbalances and because futures do not pay dividends unlike the stocks upon which they are based.

Gap Risk: The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit from the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. Trading halts may lead to gap risk.

Leveraging Risk: The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund's other risks and small changes in the value of the underlying instrument may produce disproportionate losses to the Fund. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations to meet additional margin requirements or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

Liquidity Risk: Liquidity risk exists when particular investments of the Fund would be difficult to purchase or sell, possibly preventing the Fund from selling such illiquid securities at an advantageous time or price, or possibly requiring the Fund to dispose of other investments at unfavorable times or prices in order to satisfy its obligations. In the past, in stressed markets, certain types of securities suffered periods of illiquidity if disfavored by the market. All of these risks may increase during periods of market turmoil, such as that experienced in 2020 with COVID-19, and could have a negative effect on the Fund's performance.

Newly-Formed Company Risk: Newly-formed companies may have limited product lines, distribution channels and financial and managerial resources. The risks associated with those investments are generally greater than those associated with investments in the securities of larger, more established companies. This may cause the Fund's NAV to be more volatile when compared to investment companies that focus only on large capitalization companies.

Options Risk: There are risks associated with the sale and purchase of call and put options through the Fund's underlying investments. As a seller (writer) of a put option, the seller will tend to lose money if the value of the reference index or security falls below the strike price. As the seller (writer) of a call option, the seller will tend to lose money if the value of the reference index or security rises above the strike price. As the buyer of a put or call option, the buyer risks losing the entire premium invested in the option if the buyer does not exercise the option.

Portfolio Turnover Risk: The Fund may experience high portfolio turnover, including investments made on a shorter-term basis, which may lead to increased Fund expenses that may result in lower investment returns. High portfolio turnover may also result in higher short-term capital gains taxable to shareholders.

Preferred Stock Risk: The value of preferred stocks will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of preferred stock. Preferred stocks are also subject to credit risk, which is the possibility that an issuer of preferred stock will fail to make its dividend payments. Preferred stock prices tend to move more slowly upwards than common stock prices. Convertible preferred stock tends to be more volatile than non-convertible preferred stock, because its value is related to the price of the issuer’s common stock as well as the dividends payable on the preferred stock. The value of preferred stocks will usually react more strongly than bonds and other debt securities to actual or perceived changes in issuer’s financial condition or prospects, and may be less liquid than common stocks.

Regulatory Risk: Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of the Fund. For example, the SEC recently adopted regulations that will subject activities of mutual funds trading certain derivative instruments to additional regulation, which may increase the operating expenses of the Fund and impair the Fund’s ability to achieve its investment objective.

REITs Risk: There is risk that investments in real estate investment trusts (REITs) will make the Fund more susceptible to risks associated with the ownership of real estate and with the real estate industry in general. REITs may be less diversified than other pools of securities, may have lower trading volumes and may be subject to more abrupt or erratic price movements than the overall securities markets. The value of the Fund’s investments in REITs may change in response to changes in the real estate market such as declines in the value of real estate, lack of available capital or financing opportunities, and increases in property taxes or operating costs. Shareholders of the Fund will indirectly be subject to the fees and expenses of the individual REITs in which the Fund invests.

Small and Medium Capitalization Stock Risk: The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures. Small and medium-sized companies typically have less experienced management, limited markets, narrower product lines, more limited financial resources, and less publicly available information than larger companies.

Volatility Risk: The Fund’s investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund’s portfolio may fluctuate due to events or factors that affect markets generally or that affect a particular investment, industry or sector. The value of an investment in the Fund’s portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund’s net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

Performance: The bar chart and performance table below show the variability of the Fund’s returns, which is some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year and by showing the Fund’s one-year and since inception performance compared with those of a broad measure of market performance. The bar chart shows performance of the Fund’s shares for each calendar year since the Fund’s inception. The performance table compares the performance of the Fund over time to the performance of a broad-based securities market index. You should be aware that the Fund’s past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information will be available at no cost by visiting RegentsParkFunds.com or by calling 1-866-866-4848.

Best Quarter Fourth Quarter 2020 14.50%
Worst Quarter First Quarter 2020 -29.46%

The year-to-date return as of the most recent calendar quarter, which ended June 30, 2023, was 1.49%

Performance Table
Average Annual Total Returns
(For the year ended December 31, 2022)

	One Year	Five Years	Since Inception⁽¹⁾
Return before taxes	-16.50%	-0.71%	-0.10%
Return after taxes on Distributions	-17.57%	-1.73%	-1.15%
Return after taxes on Distributions and Sale of Fund Shares	-9.61%	-0.85%	-0.40%
Bloomberg Global Aggregate Bond Index⁽²⁾ <i>(reflects no deduction for fees, expenses or taxes)</i>	-16.25%	-1.66%	-1.34%
MSCI All Country World Equity Index⁽³⁾ <i>(reflects no deduction for fees, expenses or taxes)</i>	-18.37%	5.23%	6.18%

(1) Inception date is September 28, 2017.

(2) The Bloomberg Global Aggregate Bond Index is a flagship measure of global investment grade debt from twenty-four local currency markets. This multi-currency benchmark includes treasury, government-related, corporate and securitized fixed-rate bonds from both developed and emerging markets issuers. The Fund's portfolio holdings may differ significantly from the securities held in the Index, and unlike a mutual fund, an unmanaged index assumes no transaction costs, taxes, management fees or other expenses. Investors may not invest directly in an index.

(3) The MSCI All Country World Equity Index is a market capitalization weighted index designed to provide a broad measure of equity-market performance throughout the world. The index is maintained by Morgan Stanley Capital International (MSCI) and is comprised of stocks from both developed and emerging markets. The Fund's portfolio holdings may differ significantly from the securities held in the Index, and unlike a mutual fund, an unmanaged index assumes no transaction costs, taxes, management fees or other expenses. Investors may not invest directly in an index.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown above, and after-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.

Investment Adviser: Regents Park Funds, LLC ("Regents Park" or the "Adviser").

Investment Sub-Adviser: Anfield Capital Management, LLC. ("Anfield" or the "Sub-Adviser")

Portfolio Managers: Peter Van de Zilver, CFA, Director of Portfolio Analytics & Risk Management of the Sub-Adviser, and David Young, CFA, Founder & Chief Executive Officer of the Sub-Adviser have served the Fund as its portfolio managers since it commenced operations in September 2017 and are responsible for the day to day management of the Fund. Mr. Van de Zilver is the lead portfolio manager for the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a "Creation Unit"). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, a premium), or less than NAV (*i.e.*, a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the "bid-ask spread").

Recent information, including information about the Fund's NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund's website at www.regentparkfunds.com.

Tax Information: The Fund's distributions generally will be taxable at ordinary income or long-term capital gain rates. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser or the Sub-Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ADDITIONAL INFORMATION ABOUT INVESTMENT OBJECTIVE, PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

This section provides more detailed information about the investment objective, principal investment strategies and certain risks of investing in the Anfield Diversified Alternatives ETF (the “Fund”). This section also provides information regarding the Fund’s disclosure of portfolio holdings

INVESTMENT OBJECTIVE:

Anfield Diversified Alternatives ETF (“Fund”) seeks to provide capital growth and income.

The Fund’s investment objective may be changed by the Board of Trustees of the Trust (the “Board”) upon 60 days’ written notice to shareholders.

PRINCIPAL INVESTMENT STRATEGIES:

The Fund is an actively managed ETF that is a fund of funds. It seeks to achieve its investment objective by investing primarily in alternative asset classes and securities that represent sectors, market segments or asset classes that do not represent the general investment universe. The Fund will implement this strategy primarily through investments in unaffiliated ETFs, CEFs, BDCs and REITs. The market segments and sectors represented in these securities will typically have a lower correlation to the general equity and fixed income markets and whose performance and volatility is affected by factors different from those that determine the general direction of the equity and fixed income markets. These alternative sectors and asset class categories are (i) frontier technology companies at the forefront of major technical innovations in computing, medical sciences and nano-technology, (ii) companies in newly opened or frontier markets or involved in infrastructure development and resource exploitation, (iii) traditional alternatives such as private equity, private debt, and hedge funds, (iv) long and short positions (including leveraged positions) in stocks, bonds, cash, and derivatives (futures, options, and forward contracts) on individual securities and indices, (v) energy and commodity related securities, (vi) long and short volatility strategies, (vii) multi-asset / market neutral, and (viii) absolute return / macro & event driven. The equity securities in which the Fund invests will be both domestic and foreign (including emerging markets) and of any market capitalization. Frontier technology companies are technology companies that are engaged in cutting-edge and futuristic innovations such as relating to gene research. These companies are generally micro- or “mini-micro” companies that do not correlate with the market as a whole. No more than 15% of the Fund’s net assets may be invested in private equity, private debt or hedge funds. The Fund may also invest in convertible and preferred securities. The Fund’s indirect investments in derivatives will be used for both hedging purposes and opportunistically for investment purposes to gain exposure to various market segments.

The Sub-Adviser selects potential investments based on its ongoing analysis of available opportunities. Of primary consideration are the potential for growth and an estimation of the risks involved in achieving these goals. The Sub-Adviser analyzes the Fund’s goals, portfolio composition, volatility, risk exposures and historical returns, using data from multiple sources, combined with a proprietary quantitative methodology with the goal of finding the correct balance between potential risk and return. The analysis considers multiple factors (overall economic conditions, fundamental financial criteria, valuation considerations as well as market and technical analysis). The Sub-Adviser expects that the Fund will generally hold 20-40 positions, although total holdings are dependent on market conditions, the Sub-Adviser’s market views, and other factors. Positions are weighted on a risk-adjusted basis, defined as each position’s marginal contribution to risk, (*i.e.*, the average standard deviation of a position’s price movement adjusted for correlations with other positions in the portfolio). As a result of this risk-adjusted weighting process, positions with higher standard deviations may receive lower weights than those with lower standard deviations.

PRINCIPAL AND OTHER INVESTMENT RISKS

As with all funds, there is the risk that you could lose money through your investment in the Fund. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. Neither the Adviser nor the Sub-Adviser can guarantee that the Fund will achieve its objectives. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. Many factors affect the Fund’s net asset value and performance. It is important that investors closely review and understand these risks before making an investment in the Fund. Additional information regarding the principal and certain other risks of investing in the Fund is provided below. The Fund’s Statement of Additional Information (“SAI”), which is incorporated by reference into this Prospectus, includes more information about the Fund and its investments and risks. The risks described in this Prospectus (and in the SAI) are not intended to include every potential risk of investing in the Fund. The Fund could be subject to additional risks because the types of investments it makes may change over time.

The following describes the risks the Fund bears directly, or indirectly through its investments in Underlying Funds. As with any fund, there is no guarantee that the Fund will achieve its goal.

Active Trading Risk: A higher portfolio turnover may result in higher transactional and brokerage costs associated with the turnover which may reduce the Fund's return, unless the securities traded can be bought and sold without corresponding commission costs. Active trading of securities may also increase the Fund's realized capital gains or losses, which may affect the taxes you pay as the Fund shareholder.

Authorized Participant Concentration Risk: To the extent that authorized participants are unable or otherwise unavailable to proceed with creation and/or redemption orders and no other authorized participant is able to create or redeem in their place, shares may trade at a discount to NAV and may face delisting.

BDC Risk: BDCs may carry risks similar to those of a private equity or venture capital fund. BDC company securities are not redeemable at the option of the shareholder and they may trade in the market at a discount to their net asset value. A BDC is a form of investment company that is required to invest at least 70% of its total assets in securities (typically debt) of private companies, thinly traded U.S. public companies, or short-term high-quality debt securities. The BDCs held by the Fund may leverage their portfolios through borrowings or the issuance of preferred stock. While leverage often serves to increase the yield of a BDC, this leverage also subjects a BDC to increased risks, including the likelihood of increased volatility and the possibility that a BDC's common share income will fall if the dividend rate of the preferred shares or the interest rate on any borrowings rises. A significant portion of a BDC's investments are recorded at fair value as determined by its board of directors which may create uncertainty as to the value of the BDC's investments. Non-traded BDCs are illiquid and it may not be possible to redeem shares or to do so without paying a substantial penalty. Publicly-traded BDCs usually trade at a discount to their NAV because they invest in unlisted securities and have limited access to capital markets. BDCs are subject to high failure rates among the companies in which they invest and federal securities laws impose restraints upon the organization and operations of BDCs that can limit or negatively impact the performance of a BDC. However, the Fund does not believe it would be liable for the actions of any entity in which it invests and that only its investment is at risk. Also, BDCs may engage in certain principal and joint transactions that a mutual fund or closed-end fund may not without an exemptive order from the Securities and Exchange Commission ("SEC").

Cash Redemption Risk: The Fund may pay out of its redemption proceeds in cash rather than through the in-kind delivery of portfolio securities. The Fund may be required sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have incurred if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gains distributions than if the in-kind redemption process was used. Only certain institutional investors known as Authorized Participants who have entered into an agreement with the Fund's distributor may redeem shares from the Fund directly; all other investors buy and sell shares at market prices on an exchange.

Closed End Fund Risk: The Fund invests in closed end investment companies or funds. The shares of many closed end funds, after their initial public offering, frequently trade at a price per share that is less than the net asset value per share, the difference representing the "market discount" of such shares. This market discount may be due in part to the investment objective of long-term appreciation, which is sought by many closed end funds, as well as to the fact that the shares of closed end funds are not redeemable by the holder upon demand to the issuer at the next determined net asset value, but rather, are subject to supply and demand in the secondary market. A relative lack of secondary market purchasers of closed end fund shares also may contribute to such shares trading at a discount to their net asset value.

The Fund may invest in shares of closed end funds that are trading at a discount to net asset value or at a premium to net asset value. There can be no assurance that the market discount on shares of any closed end fund purchased by the Fund will ever decrease. In fact, it is possible that this market discount may increase and the Fund may suffer realized or unrealized capital losses due to further decline in the market price of the securities of such closed end funds, thereby adversely affecting the net asset value of the Fund's shares. Similarly, there can be no assurance that any shares of a closed end fund purchased by the Fund at a premium will continue to trade at a premium or that the premium will not decrease subsequent to a purchase of such shares by the Fund.

Closed end funds may issue senior securities (including preferred stock and debt obligations) for the purpose of leveraging the closed end fund's common shares in an attempt to enhance the current return to such closed end fund's common shareholders. The Fund's investment in the common shares of closed end funds that are financially leveraged may create an opportunity for greater total return on its investment, but at the same time may be expected to exhibit more volatility in market price and net asset value than an investment in shares of investment companies without a leveraged capital structure.

Commodity Risk: The Fund's exposure to the commodities futures markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments such as commodity-based notes may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or sectors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international economic, political and regulatory developments.

Common Stock Risk: The stock (*i.e.*, equity) market can be volatile. Equity securities are susceptible to general market fluctuations and volatile increases, decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. The prices of stocks can fall rapidly in response to developments affecting a specific company or industry, or to changing economic, political or market conditions.

Convertible Securities Risk: Convertible securities include fixed income securities that may be exchanged or converted into a predetermined number of the issuer's common stock at the option of the holder during a specified period. The market value of a convertible security performs like that of a regular debt security; that is, if market interest rates rise, the value of a convertible security usually falls. In addition, convertible securities are subject to the risk that the issuer will not be able to pay interest or dividends when due, and their market value may change based on changes in the issuer's credit rating or the market's perception of the issuer's creditworthiness. Since it derives a portion of its value from the common stock into which it may be converted, a convertible security is also subject to the same types of market and issuer risks that apply to the underlying common stock. Convertible securities subject the Fund to the risks associated with both fixed-income securities and equity securities. If a convertible security's investment value is greater than its conversion value, its price likely increase when interest rates fall and decrease when interest rates rise. If the conversion value exceeds the investment value, the price of the convertible security will tend to fluctuate directly with the price of the underlying equity security.

Cybersecurity Risk: There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund or its Service Providers to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund, or its Service Providers may adversely impact the Fund or its shareholders. Because information technology ("IT") systems and digital data underlie most of the Fund's operations, the Fund and its Service Providers are exposed to the risk that their operations and data may be compromised as a result of internal and external cyber-failures, breaches or attacks ("Cyber Risk"). This could occur as a result of malicious or criminal cyber-attacks. Cyber-attacks include actions taken to: (i) steal or corrupt data maintained online or digitally, (ii) gain unauthorized access to or release confidential information, (iii) shut down the Fund or Service Provider website through denial-of-service attacks, or (iv) otherwise disrupt normal business operations. Events arising from human error, faulty or inadequately implemented policies and procedures or other systems failures unrelated to any external cyber-threat may have effects similar to those caused by deliberate cyber-attacks. See "Cybersecurity" below for additional risks related to potential cybersecurity breaches.

Derivatives Risk: The Fund may invest in derivatives, which are financial instruments whose value is typically based on the value of a security, index or other instrument. These instruments include futures, options, credit default swaps, total return swaps, repurchase agreements and other similar instruments and may be subject to unanticipated market movements, which are potentially unlimited. Derivatives may also include customized baskets or options (which may incorporate other securities directly and also various derivatives including common stock, options, and futures) structured as agreed upon by a counterparty, as well as specially structured types of mortgage- and asset-backed securities whose value is often linked to commercial and residential mortgage portfolios. The Fund's use of derivative instruments involves risks different from, and possibly greater than, the risks associated with investing directly in securities and other more traditional investments, and certain derivatives may create a risk of loss greater than the amount invested.

Investing for hedging purposes or to increase the Fund's return may result in certain additional transaction costs that may reduce the Fund's performance. When used for hedging purposes, no assurance can be given that each derivative position will achieve a perfect correlation with the investment against which it is being hedged. Because the markets for certain derivative instruments are relatively new, suitable derivatives transactions may not be available in all circumstances for risk management or other purposes and there can be no assurance that a particular derivative position will be available when sought by the Adviser or that such techniques will be utilized by the Adviser.

The market value of derivative instruments and securities may be more volatile than that of other instruments, and each type of derivative instrument may have its own special risks, including the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates, and indices. Many derivatives, in particular privately negotiated derivatives, are complex and often valued subjectively. Improper valuations can result in increased cash payment requirements to counterparties or a loss of value to the Fund. The value of derivatives may not correlate perfectly, or at all, with the value of the assets, reference rates or indices they are designed to closely track.

Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Derivatives are subject to a number of other risks, including liquidity risk (the possibility that the derivative may be difficult to purchase or sell and the Adviser may be unable to initiate a transaction or liquidate a position at an advantageous time or price), leverage risk (the possibility that adverse changes in the value or level of the underlying asset, reference rate or index can result in loss of an amount substantially greater than the amount invested in the derivative), interest rate risk (some derivatives are more sensitive to interest rate changes and market price fluctuations), and counterparty risk (the risk that a counterparty may be unable to perform according to a contract, and that any deterioration in a counterparty's creditworthiness could adversely affect the instrument). In addition, because derivative products are highly specialized, investment techniques and risk analyses employed with respect to investments in derivatives are different from those associated with stocks and bonds. Finally, the Fund's use of derivatives may cause the Fund to realize higher amounts of short-

term capital gains (generally taxed at ordinary income tax rates) than if the Fund had not used such instruments. Derivative instruments are also subject to the risk that the market value of an instrument will change to the detriment of the Fund. If the Adviser inaccurately forecast the values of securities, currencies or interest rates or other economic factors in using derivatives, the Fund might have been in a better position if it had not entered into the transaction at all. Some strategies involving derivative instruments can reduce the risk of loss, but they can also reduce the opportunity for gain or result in losses by offsetting favorable price movements in other investments held by the Fund. New derivatives regulations require the Fund, to the extent it uses derivatives to a material extent, to, among other things, comply with certain overall limits on leverage. These regulations may limit the ability of the Fund to pursue its investment strategies and may not be effective to mitigate the Fund's risk of loss from derivatives. The Fund may also have to buy or sell a security at a disadvantageous time or price because regulations require funds to maintain offsetting positions or asset coverage in connection with certain derivatives transactions.

Emerging Markets Risk: The Fund may invest in countries with newly organized or less developed securities markets. The Fund's investments in emerging market countries are subject to all of the risks of foreign investing generally, and have additional heightened risks due to a lack of established legal, political, business and social frameworks to support securities markets. There are typically greater risks involved in investing in emerging markets securities. Generally, economic structures in these countries are less diverse and mature than those in developed countries and their political systems tend to be less stable. Emerging market economies may be based on only a few industries, therefore security issuers, including governments, may be more susceptible to economic weakness and more likely to default. Emerging market countries also may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Investments in emerging markets countries may be affected by government policies that restrict foreign investment in certain issuers or industries. The potentially smaller size of their securities markets and lower trading volumes can make investments relatively illiquid and potentially more volatile than investments in developed countries, and such securities may be subject to abrupt and severe price declines. Due to this relative lack of liquidity, the Fund may have to accept a lower price or may not be able to sell a portfolio security at all. An inability to sell a portfolio position can adversely affect the Fund's value or prevent the Fund from being able to meet cash obligations or take advantage of other investment opportunities. Governments of emerging market countries may own or control parts of the private sector. Accordingly, government actions could have a significant impact on economic conditions. Certain emerging market countries require governmental approval prior to investments by foreign persons, limit the amount of investment by foreign persons in a particular sector and/or company, limit the investment by foreign persons to a specific class of securities of an issuer that may have less advantageous rights than a domestically available class, require foreign investors to maintain a trading account with only one licensed securities company in the relevant market and/or impose additional taxes on foreign investors. These may contribute to the illiquidity of the relevant securities market, as well as create inflexibility and uncertainty as to the trading environment. The legal remedies for investors in emerging markets may be more limited than the remedies available in the U.S., and the ability of U.S. authorities (e.g., SEC and the U.S. Department of Justice) to bring actions against bad actors may be limited.

Frontier market countries generally have smaller economies or less developed capital markets than traditional emerging markets and, as a result, the risks of investing in emerging market countries are magnified in frontier market countries. The economies of frontier market countries are less correlated to global economic cycles than those of their more developed counterparts and their markets have low trading volumes and the potential for extreme price volatility and illiquidity.

Energy Risks: Risks of energy related securities include the risks that a decrease in the production of natural gas, natural gas liquids, crude oil, coal or other energy commodities or a decrease in the volume of such commodities available for transportation, mining, processing, storage or distribution may adversely impact the financial performance of energy related securities. To maintain or grow their revenues, these companies need to maintain or expand their reserves through exploration of new sources of supply, through the development of existing sources, through acquisitions, or through long-term contracts to acquire reserves. The financial performance of energy related securities may be adversely affected if a company is unable to cost-effectively acquire additional reserves sufficient to replace the natural decline. Various governmental authorities have the power to enforce compliance with regulations and the permits issued under them, and violators are subject to administrative, civil and criminal penalties, including civil fines, injunctions or both. Stricter laws, regulations or enforcement policies could be enacted in the future which would likely increase compliance costs and may adversely affect the financial performance of energy related securities. Volatility of commodity prices, which may lead to a reduction in production or supply, may also negatively impact the performance of energy related securities. Energy related securities are also subject to risks that are specific to the industry they serve. Energy related entities that provide crude oil, refined product, natural gas liquids and natural gas services are subject to supply and demand fluctuations in the markets they serve which will be impacted by a wide range of factors, including fluctuating commodity prices, weather, increased conservation or use of alternative fuel sources, increased governmental or environmental regulation, depletion, rising interest rates, declines in domestic or foreign production, accidents or catastrophic events, and economic conditions, among others. The energy markets have experienced significant volatility in recent periods, including a historic drop in crude oil and natural gas prices in 2020 attributable to the significant decrease in demand for oil and other energy commodities as a result of the slowdown in economic activity due to the COVID-19 pandemic as well as price competition among key oil-producing countries. Future pandemics could lead to reduced production and price volatility.

ETF Structure Risk: The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable:* Shares are not individually redeemable and may be redeemed by the Fund at NAV only in large blocks known as “Creation Units.” You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues:* Trading in shares on the CBOE BZX Exchange, Inc. (the “Exchange”) may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund’s shares may not be developed or maintained. If the Fund’s shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund’s shares.
- *Market Price Variance Risk:* Individual shares of the Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly, and you may pay more than net asset value when buying shares on the secondary market, and you may receive less than net asset value when you sell those shares. This means that shares may trade at a discount to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the net asset value or sells shares at a time when the market price is at a discount to net asset value, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares. In times of market stress, such as what was experienced in 2020 with the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s NAV. The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s NAV, which is reflected in the bid and ask price for Fund shares or in the closing price. When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s NAV. In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s NAV.

Financial Sector Risk: The financial sector can be significantly affected by changes in interest rates, government regulation, the rate of defaults on corporate, consumer and government debt, the availability and cost of capital, and the impact of more stringent capital requirements. The Fund may be adversely affected by events or developments negatively impacting the financial sector.

Fixed Income Securities Risk: Fixed income securities held by the Fund are subject to interest rate risk, call risk, prepayment and extension risk, credit risk, duration risk and liquidity risk, which are more fully described below. In addition, current market conditions may pose heightened risks for fixed income securities. The Fund may lose money if short-term or long-term interest rates rise sharply in a manner not anticipated by Fund management. A general rise in interest rates has the potential to cause investors to move out of fixed-income securities on a large scale, which may increase redemptions from funds that hold large amounts of fixed-income securities. Heavy redemptions could cause the Fund to sell assets at inopportune times or at a loss or depressed value and could hurt the Fund’s performance. When the Fund invests in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund. In general, the market price of fixed income securities with longer maturities or durations will increase or decrease more in response to changes in interest rates than shorter-term securities. Risks associated with rising interest rates are heightened given that interest rates in the U.S. currently remain near historic lows but have recently risen and are expected to rise further. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund’s share price and total return to be reduced and fluctuate more than other types of investments. Moreover, new regulations applicable to and changing business practices of financial intermediaries that make markets in fixed income securities have resulted in less market making activity for certain fixed income securities, which has reduced the liquidity and may increase the volatility for such fixed income securities. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity may decline unpredictably in response to overall economic conditions or credit tightening. For example, a general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities. Duration risk arises when holding long duration and long maturity investments, which will magnify certain risks, including interest rate risk and credit risk.

- *Call Risk:* During periods of declining interest rates, a bond issuer may “call,” or repay, its high yielding bonds before their maturity dates. The Fund would then be forced to invest the unanticipated proceeds at lower interest rates, resulting in a decline in its income.
- *Credit Risk:* Fixed income securities are generally subject to the risk that the issuer may be unable to make principal and interest payments when they are due. There is also the risk that the securities could lose value because of a loss of confidence in the ability of the borrower to pay back debt. Lower rated fixed income securities involve greater credit risk, including the possibility of default or bankruptcy.

- *Duration Risk:* Longer-term securities may be more sensitive to interest rate changes. Given the recent increases to the historically low interest rates and the potential for further increases in those rates, a heightened risk is posed by rising interest rates to longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security's price. If rates drop significantly, effective duration may tend to overstate the rise in a security's price.
- *Interest Rate Risk:* Fixed income securities are subject to the risk that the securities could lose value because of interest rate changes. For example, bonds tend to decrease in value if interest rates rise. Fixed income securities with longer maturities or durations sometimes offer higher yields but are subject to greater price shifts as a result of interest rate changes than fixed income securities with shorter maturities. Investments in fixed income securities with longer maturities or durations may result in greater fluctuations in the value of the Fund. The Fund has no policy limiting the maturity or duration of the fixed income securities it purchases.
- *Liquidity Risk:* Trading opportunities are more limited for fixed income securities that have not received any credit ratings, have received ratings below investment grade or are not widely held. These features make it more difficult to sell or buy a security at a favorable price or time. Consequently, the Fund may have to accept a lower price to sell a security, sell other securities to raise cash or give up an investment opportunity, any of which could have a negative effect on its performance. Infrequent trading of securities may also lead to an increase in their price volatility. Liquidity risk also refers to the possibility that the Fund may not be able to sell a security or close out an investment contract when it wants to. If this happens, the Fund will be required to hold the security or keep the position open, and it could incur losses. In addition, less liquid securities may be more difficult to value, and markets may become less liquid when there are fewer interested buyers or sellers or when dealers are unwilling or unable to make a market for certain securities. Recently, dealers have generally been less willing to make markets for fixed income securities. All of these risks may increase during periods of market turmoil and could have a negative effect on the Fund's performance.
- *Prepayment and Extension Risk:* Many types of fixed income securities are subject to prepayment risk. Prepayment occurs when the issuer of a fixed income security can repay principal prior to the security's maturity. Fixed income securities subject to prepayment can offer less potential for gains during a declining interest rate environment and similar or greater potential for loss in a rising interest rate environment. In addition, the potential impact of prepayment features on the price of a fixed income security can be difficult to predict and result in greater volatility. On the other hand, rising interest rates could cause prepayments of the obligations to decrease, extending the life of mortgage- and asset-backed securities with lower payment rates. This is known as extension risk and may increase the Fund's sensitivity to rising rates and its potential for price declines.
- *Variable and Floating Rate Securities:* Variable and floating rate securities generally are less sensitive to interest changes but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. Floating rate securities will not generally increase in value if interest rates decline.

Fluctuation of Net Asset Value Risk: The NAV of the Fund's shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Sub-Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund's holdings trading individually or in the aggregate at any point in time. In addition, unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the shares will trade at premiums or discounts to NAV.

Foreign (Non-U.S.) Investment Risk: Foreign securities include direct investments in non-U.S. dollar-denominated securities traded primarily outside of the United States and dollar-denominated securities of foreign issuers. Foreign securities also include indirect investments such as American Depositary Receipts ("ADRs"), European Depositary Receipts ("EDRs") and Global Depositary Receipts ("GDRs"). ADRs are U.S. dollar-denominated receipts representing shares of foreign-based corporations. ADRs are receipts that are traded in the United States and entitle the holder to all dividend and capital gain distributions that are paid out on the underlying foreign shares. EDRs and GDRs are receipts that often trade on foreign exchanges. They represent ownership in an underlying foreign or U.S. security and generally are denominated in a foreign currency. Foreign government obligations may include debt obligations of supranational entities, including international organizations (such as The International Bank for Reconstruction and Development, also known as the World Bank) and international banking institutions and related government agencies.

Foreign (non-U.S.) securities present greater investment risks than investing in the securities of U.S. issuers and may experience more rapid and extreme changes in value than the securities of U.S. companies. Foreign securities involve risks related to less stringent foreign securities regulations and less information about foreign (non-U.S.) companies in the form of reports and ratings than about U.S. issuers; less stringent investor protections and corporate governance; more or less foreign government regulations; different accounting, auditing and financial reporting requirements; smaller markets; nationalization; expropriation or confiscatory taxation; currency blockage; or political, financial, social and economic events (including, for example, military confrontations, war and terrorism) or diplomatic developments. To the extent that the Fund invests a significant portion of its assets in a specific geographic region, the Fund will generally have more exposure to regional economic risks associated with foreign investments. Foreign (non-U.S.) securities may also be less liquid and more difficult to value than securities of U.S. issuers. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities. Certain foreign markets may rely heavily on particular industries or foreign capital and are more vulnerable to diplomatic developments, the imposition of economic sanctions against a particular country or countries, organizations, entities and/or individuals, changes in international trading patterns, trade barriers, and other protectionist or retaliatory measures. International trade barriers or economic sanctions against foreign countries, organizations, entities and/or individuals may adversely affect the Fund's foreign holdings or exposures.

Foreign securities involve special risks and costs, which are considered by the Adviser or Sub-Adviser in evaluating the creditworthiness of issuers and making investment decisions for the Fund. Foreign securities fluctuate in price because of political, financial, social and economic events in foreign countries (including, for example, military confrontations, war and terrorism). A foreign security could also lose value because of more or less stringent foreign securities regulations and less stringent accounting and disclosure standards. In addition, foreign markets may have greater volatility than domestic markets and foreign securities may be less liquid and harder to value than domestic securities.

Foreign securities, and in particular foreign debt securities, are sensitive to changes in interest rates. In addition, investment in the securities of foreign governments involves the risk that foreign governments may default on their obligations or may otherwise not respect the integrity of their obligations. The performance of investments in securities denominated in a foreign currency also will depend, in part, on the strength of the foreign currency against the U.S. dollar and the interest rate environment in the country issuing the currency. Absent other events which otherwise could affect the value of a foreign security (such as a change in the political climate or an issuer's credit quality), appreciation in the value of the foreign currency generally results in an increase in value of a foreign currency-denominated security in terms of U.S. dollars. A decline in the value of the foreign currency relative to the U.S. dollar generally results in a decrease in value of a foreign currency-denominated security. Additionally, many countries throughout the world are dependent on a healthy U.S. economy and are adversely affected when the U.S. economy weakens or its markets decline.

Investment in foreign securities may involve higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments. Foreign investments also may involve risks associated with the level of currency exchange rates, less complete financial information about the issuers, less market liquidity, more market volatility and political instability. Future political and economic developments, the possible imposition of withholding taxes on dividend income, the possible seizure or nationalization of foreign holdings, the possible establishment of exchange controls or freezes on the convertibility of currency, trade restrictions (including tariffs) or the adoption of other governmental restrictions might adversely affect an investment in foreign securities. Additionally, foreign banks and foreign branches of domestic banks may be subject to less stringent reserve requirements and to different accounting, auditing and recordkeeping requirements.

While the Fund's or an Underlying Fund's investments may, if permitted, be denominated in foreign currencies, the portfolio securities and other assets held by the Fund or Underlying Funds are valued in U.S. dollars. Price fluctuations may occur in the dollar value of foreign securities because of changing currency exchange rates or, in the case of hedged positions, because the U.S. dollar declines in value relative to the currency hedged. Currency exchange rates may fluctuate significantly over short periods of time causing the Fund's or Underlying Fund's NAV to fluctuate as well. Currency exchange rates can be affected unpredictably by the intervention or the failure to intervene by U.S. or foreign governments or central banks, or by currency controls or political developments in the United States or abroad. To the extent that the Fund or Underlying Fund is invested in foreign securities while also maintaining currency positions, it may be exposed to greater combined risk. The net currency positions of the Fund or Underlying Funds may expose them to risks independent of their securities positions.

The Fund or Underlying Funds may operate in euros and/or may hold euros and/or euro-denominated bonds and other obligations. The euro requires participation of multiple sovereign states forming the Euro zone and is therefore sensitive to the credit and general economic and political positions of each such state, including, each state's actual and intended ongoing engagement with and/or support for the other sovereign states then forming the European Union ("EU"), in particular those within the Euro zone. Changes in these factors might materially and adversely impact the value of securities in which the Fund or Underlying Fund has invested.

On January 31, 2020, the United Kingdom ("UK") left the EU (commonly referred to as "Brexit"). The UK and the EU signed the EU-UK Trade and Cooperation Agreement ("TCA"), which is an agreement on the terms governing certain aspects of the EU's and UK's relationship post Brexit. However, under the TCA, many aspects of the EU-UK relationship remain subject to further negotiation. The full effects of Brexit are unknown at this time and could negatively impact the value of a Fund's investments. Securities issued by companies domiciled in the UK could be subject to changing regulatory and tax regimes. Banking and financial services companies that operate in the UK or EU could be disproportionately impacted by these actions. Further insecurity in EU membership or the abandonment of the euro, could exacerbate market and currency volatility and negatively impact the Fund's investments in securities issued by companies located in EU countries. The impact of these actions, especially if they occur in a disorderly fashion, is not clear but could be significant and far-reaching. A number of countries in Europe have suffered terror attacks, and additional attacks may

occur in the future. Ukraine has experienced ongoing military conflict; this conflict may expand and military attacks could occur in Europe. Europe has also been struggling with mass migration from the Middle East and Africa. Recent and upcoming European elections could, depending on the outcomes, further call into question the future direction of the EU. The ultimate effects of these events and other socio-political or geopolitical issues are not known but could profoundly affect global economies and markets. The impact of these actions, especially if they occur in a disorderly fashion, is not clear, but could be significant and far-reaching. Whether or not the Fund or an Underlying Fund invests in securities of issuers located in Europe or with significant exposure to European issuers or countries, these events could negatively affect the value and liquidity of the Fund's investments.

In addition, Russia's recent military incursions in Ukraine have led to sanctions being levied against Russia by the United States, EU and other countries, which could adversely affect European and global energy and financial markets, as well as commodity prices, supply chains and global trade. This and future geopolitical tensions could have an outsized impact on the Fund's investments due to its exposure to frontier markets, commodities, and energy.

Forward and Futures Contract Risk: The successful use of forward and futures contracts draws upon the Adviser's or Sub-Adviser's skill and experience with respect to such instruments and is subject to special risk considerations. The primary risks associated with the use of forward and futures contracts, which may adversely affect the Fund's NAV and total return, are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) losses caused by unanticipated market movements, which are potentially unlimited; (d) the Adviser's or Sub-Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (e) the possibility that the counterparty will default in the performance of its obligations; and (f) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, or to meet margin increases required as a result of market conditions or periods of high volatility and the Fund may have to sell securities at a time when it may be disadvantageous to do so. The Fund could be unable to recover assets held at the futures clearing broker, even assets directly traceable to the Fund from the futures clearing broker in the event of a bankruptcy of the broker. A futures clearing broker is required to segregate customer funds pursuant to the Commodities Exchange Act and the regulations of the U.S. Commodity Futures Trading Commission ("CFTC"). However, in the unlikely event of the broker's bankruptcy, there is no equivalent of the Securities Investors Protection Corporation insurance as is applicable in the case of securities broker dealers' bankruptcies.

Gap Risk: The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day's closing price. For example, the price of a stock can drop from its closing price one night to its opening price the next morning. The difference between the two prices is the gap. Trading halts may lead to gap risk.

Investment Companies and Exchange-Traded Funds Risk: When the Fund invests in another investment company, including an ETF and a closed-end fund, it will bear additional expenses based on its pro rata share of such other investment company's operating expenses, including management fees, in addition to those paid by the Fund. The risk of owning an investment company (including an ETF or a closed-end fund) generally reflects the risks of owning the underlying investments held by such investment company. The Fund will also incur brokerage costs when it purchases and sells closed-end funds and ETFs. The Fund may invest in inverse ETFs, which may result in increased volatility and will magnify the Fund's losses or gains. During periods of market volatility, inverse ETFs may not perform as expected.

Leveraging Risk: The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile. The use of leverage may increase expenses and increase the impact of the Fund's other risks. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so to satisfy its obligations to meet additional margin requirements or to meet collateral segregation requirements or regulatory requirements resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

LIBOR Risk: The Fund may invest in securities and other instruments whose interest payments are determined by references to the London Interbank Offered Rate ("LIBOR"). The United Kingdom Financial Conduct Authority, which regulates LIBOR, previously announced that after 2021 it would cease its active encouragement of banks to provide the quotations needed to sustain LIBOR. ICE Benchmark Administration Limited, the administrator of LIBOR, ceased publication of certain LIBOR settings on a representative basis at the end of 2021 and is expected to cease publication of the remaining LIBOR settings on a representative basis after June 30, 2023. The U.S. Federal Reserve, based on the recommendations of the New York Federal Reserve's Alternative Reference Rate Committee (comprised of major derivative market participants and their regulators), has begun publishing a Secured Overnight Financing Rate (SOFR), a broad measure of secured overnight U.S. Treasury repo rates, that is intended to replace U.S. dollar LIBOR. Actions by regulators have resulted in the establishment of alternative reference rates to LIBOR in most major currencies.

Markets are developing in response to these new rates, but questions around liquidity in these rates and how to appropriately adjust these rates to eliminate any economic value transfer at the time of transition remain a significant concern. The unavailability of LIBOR presents risks to the Fund, including the risk that any pricing or adjustments to the Fund's investments resulting from a substitute or alternate reference rate may adversely affect the Fund's performance and/or NAV. The utilization of an alternative reference rate, or the transition process to an alternative reference rate, may adversely affect the Fund's performance. It remains uncertain how such changes would be implemented and the effects such changes would have on the Fund, including any negative effects on the Fund's liquidity and valuation of the Fund's investments, issuers of instruments in which the Fund invests and financial markets generally.

Uncertainty related to the liquidity impact of the change in rates, negative effects on the valuation of the Fund's investments, and how to appropriately adjust these rates at the time of transition, poses risks for the Fund. The effect of any changes to, or discontinuation of, LIBOR on the Fund will depend on, among other things, (1) existing fallback or termination provisions in individual contracts and (2) whether, how, and when industry participants develop and adopt new reference rates and fallbacks for both legacy and new instruments and contracts. The expected discontinuation of LIBOR could have a significant impact on the financial markets in general and may also present heightened risk to market participants, including public companies, investment advisers, investment companies, and broker-dealers. The risks associated with this discontinuation and transition will be exacerbated if the work necessary to effect an orderly transition to an alternative reference rate is not completed in a timely manner. For example, current information technology systems may be unable to accommodate new instruments and rates with features that differ from LIBOR. Accordingly, it is difficult to predict the full impact of the transition away from LIBOR on the Fund until new reference rates and fallbacks for both legacy and new instruments and contracts are commercially accepted and market practices become settled.

Alteration of the terms of a debt instrument or a modification of the terms of other types of contracts to replace an interbank offered rate with a new reference rate could result in a taxable exchange and the realization of income and gain/loss for U.S. federal income tax purposes. The IRS has issued Treasury regulations regarding the tax consequences of the transition from interbank offered rates to new reference rates in debt instruments and non-debt contracts. Under the Treasury regulations, to avoid such alteration or modification of the terms of a debt instrument being treated as a taxable exchange, the fair market value of the modified instrument or contract must be substantially equivalent to its fair market value before the qualifying change was made.

Liquidity Risk: There is risk that the Fund may not be able to liquidate its holdings because of unusual market conditions, an unusually high volume of redemption requests, legal restrictions impairing its ability to sell particular securities or close derivative positions at an advantageous market price or other reasons. Certain portfolio securities may be less liquid than others, which may make them difficult or impossible to sell at the time and the price that the Fund would like or difficult to value. The Fund may have to lower the price, sell other securities instead or forgo an investment opportunity. In addition, less liquid securities may be more difficult to value and markets may become less liquid when there are fewer interested buyers or sellers or when dealers are unwilling or unable to make a market for certain securities. Recently, dealers have generally been less willing to make markets for fixed income securities. Any of these events could have a negative effect on fund management or performance. Funds with principal investment strategies that involve investments in securities of companies with smaller market capitalizations, foreign securities, Rule 144A securities, derivatives or securities with substantial market and/or credit risk tend to have the greatest exposure to liquidity risk. In the past, in stressed markets, certain types of securities suffered periods of illiquidity if disfavored by the market. All of these risks may increase during periods of market turmoil, such as that experienced in 2020 with COVID-19 and could have a negative effect on the Fund's performance.

Management Risk: The Fund's investment strategies may not result in an increase in the value of your investment in the Fund or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. The net asset value of the Fund changes daily based on the performance of the securities and derivatives in which it invests. The Fund's ability to identify and invest in attractive opportunities is dependent upon the Adviser. The Adviser's judgments about the attractiveness, value and potential appreciation of particular securities and derivatives in which the Fund invests may prove to be incorrect and may not produce the desired results. If one or more key individuals leave, the Adviser may not be able to hire qualified replacements or may require extended time to do so. This situation could prevent the Fund from achieving its investment objectives. The Fund's portfolio managers use quantitative analyses and/or models. Any imperfections or limitations in such analyses and models could affect the ability of the portfolio managers to implement strategies. By necessity, these analyses and models make simplifying assumptions that limit their efficacy. Models that appear to explain prior market data can fail to predict future market events. Further, the data used in models may be inaccurate and/or it may not include the most recent information about a company or a security. Additionally, the Adviser may have conflicts of interest that could interfere with its management of the Fund's portfolio. For example, the Adviser or its affiliates may manage other investment funds or have other clients that may be similar to, or overlap with, the investment objective and strategy of the Fund, creating potential conflicts of interest when making decisions regarding which investments may be appropriate for the Fund and other clients. Further information regarding conflicts of interest is available in the SAI.

Market Events Risk: There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions are an inevitable part of investing in capital markets and may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, have taken steps to support financial markets, including by lowering interest rates to historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve have recently reduced market support activities, including by beginning to increase interest rates. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also continue to contribute to decreased liquidity and increased volatility in the financial markets. The impact of these changes on the markets, and the practical implications for market participants, may not be fully known for some time.

The impact of COVID-19, and other infectious illness outbreaks that may arise in the future, could adversely affect the economies of many nations or the entire global economy, individual issuers and capital markets in ways that cannot necessarily be foreseen. In addition, the impact of infectious illnesses in emerging market countries may be greater due to generally less established healthcare systems.

Market Risk: Overall market risk may affect the value of individual instruments in which the Fund or an Underlying Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, military conflict, acts of terrorism, social unrest, natural disasters, recessions, inflation, changes in interest rate levels, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats, lack of liquidity in the bond or other markets, volatility in the securities markets, adverse investor sentiment affect the securities markets and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. A change in financial condition or other event affecting a single issuer or market may adversely impact securities markets as a whole. Rates of inflation have recently risen. The value of assets or income from an investment may be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Fund's assets can decline as can the value of the Fund's distributions. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Equity securities generally have greater price volatility than fixed income securities, although under certain market conditions fixed income securities may have comparable or greater price volatility. During a general downturn in the securities markets, multiple asset classes may decline in value simultaneously. Adverse market conditions may be prolonged and may not have the same impact on all types of securities. Different sectors of the market and different security types may react differently to such developments. Changes in value may be temporary or may last for extended periods. The Fund may experience a substantial or complete loss on any individual security. Even when securities markets perform well, there is no assurance that the investments held by the Fund will increase in value along with the broader market. Market factors, such as the demand for particular portfolio securities, may cause the price of certain portfolio securities to fall while the prices of other securities rise or remain unchanged.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

Newly-Formed Company Risk: Newly-formed companies may have limited product lines, distribution channels and financial and managerial resources. The risks associated with those investments are generally greater than those associated with investments in the securities of larger, more established companies. This may cause the Fund's NAV to be more volatile when compared to investment companies that focus only on large capitalization companies.

Generally, securities of newly-formed companies are more likely to experience sharper swings in market value, less liquid markets in which it may be more difficult for the Adviser to sell at times and at prices that the Adviser believes appropriate and generally are more volatile than those of larger companies. Compared to large companies, newly-formed companies are more likely to have (i) less information publicly available, (ii) more limited product lines or markets and less mature businesses, (iii) fewer capital resources, (iv) more limited management depth and (v) shorter operating histories. Further, the equity securities of newly-formed companies are often traded over the counter and generally experience a lower trading volume than is typical for securities that are traded on a national securities exchange. Consequently, the Fund may be required to dispose of these securities over a larger period of time (and potentially at less favorable prices) than would be the case for securities of larger companies, offering greater potential for gains and losses and associated tax consequences.

Options Risk: The Fund's underlying investment may lose the entire put option premium paid if the underlying security does not decrease in value at expiration. Put options may not be an effective hedge because they may have imperfect correlation to the value of the Fund's portfolio securities. Purchased put options may decline in value due to changes in price of the underlying security, passage of time and changes in volatility. Written call and put options may limit the Fund's participation in equity market gains and may magnify the losses if the price of the written option instrument increases in value between the date when the Fund writes the option and the date on which the Fund purchases an offsetting position. The Fund will incur a loss as a result of a written options (also known as a short position) if the price of the written option instrument increases in value between the date when the Fund writes the option and the date on which the Fund purchases an offsetting position. The losses are potentially large in a written put transaction and potentially unlimited in an unhedged written call transaction.

Portfolio Turnover Risk: The Fund may experience high portfolio turnover, including investments made on a shorter-term basis, which may lead to increased Fund expenses that may result in lower investment returns. High portfolio turnover may also result in higher short-term capital gains taxable to shareholders.

Preferred Stock Risk: The Fund may invest in preferred stocks. The value of preferred stocks will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of preferred stock. Preferred stocks are also subject to credit risk, which is the possibility that an issuer of preferred stock will fail to make its dividend payments. Preferred stock prices tend to move more slowly upwards than common stock prices. Convertible preferred stock tends to be more volatile than non-convertible preferred stock, because its value is related to the price of the issuer's common stock as well as the dividends payable on the preferred stock. The value of preferred stocks will usually react more strongly than bonds and other debt securities to actual or perceived changes in issuer's financial condition or prospects and may be less liquid than common stocks.

Regulatory Risk: Changes in the laws or regulations of the United States or other countries, including any changes to applicable tax laws and regulations, could impair the ability of the Fund to achieve its investment objective and could increase the operating expenses of investment companies trading certain derivative instruments to regulation by the CFTC, including additional disclosure and operational obligations. The SEC recently adopted regulations that will subject activities of investment companies trading certain derivative instruments to additional regulation, which may increase the operating expenses of the Fund and impair the Fund's ability to achieve its investment objective.

REITs Risk: There is risk that investments in real estate investment trusts (REITs) will make the Fund more susceptible to risks associated with the ownership of real estate and with the real estate industry in general. The Fund's investments in REITs may subject the Fund to the following additional risks: declines in the value of real estate, changes in interest rates, lack of available mortgage funds or other limits on obtaining capital, overbuilding, extended vacancies of properties, increases in property taxes and operating expenses, changes in zoning laws and regulations, unexpected variances of properties, casualty or condemnation losses and tax consequences of the failure of a REIT to comply with tax law requirements. REITs that invest in real estate mortgages are also subject to prepayment risks. REITs may be less diversified than other pools of securities, may have lower trading volumes and may be subject to more abrupt or erratic price movements than the overall securities markets. REITs are also subject to heavy cash flow dependency, defaults by borrowers, self-liquidation and liquidity risk. REITs may have limited financial resources, may trade less frequently in lower volume, engage in dilutive offerings or become more volatile than other securities. The Fund will bear a proportionate share of the REIT's ongoing operating fees and expenses, which may include management, operating and administrative expenses in addition to the expenses of the Fund. To the extent an investment meets the qualifications of a REIT under the Internal Revenue Code of 1986, as amended, the REIT will not be taxed on distributions made to the Fund. In the event an investment fails to qualify as a REIT, the REIT will be subject to tax as a C corporation at U.S. federal income tax rates (currently, at a flat rate of 21%). The resulting corporate taxes could reduce the Fund's net assets, the amount of income available for distribution and the amount of our distributions.

Small and Medium Capitalization Stock Risk: The stocks of small and medium capitalization companies involve substantial risk. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Small and medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures. These companies typically have less experienced management, limited product lines, limited markets or financial resources, and less publicly available information than larger companies. Stocks of these companies may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general.

Underlying Fund Risk: The Underlying Funds in which the Fund invests are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, the cost of investing in the Fund will be higher than the cost of investing directly in the Underlying Funds and may be higher than other mutual funds that invest directly in stocks and bonds. Each of the Underlying Funds is subject to its own specific risks, but the Sub-Adviser expects the principal investments risks of such Underlying Funds will be similar to the risks of investing in the Fund. Additionally, the Fund will be indirectly exposed to the risks of the portfolio assets held by an Underlying Fund in which the Fund invests, including, but not limited to, those of equity options, derivatives, currencies, index, leverage, and replication management. Additional risks of investing in Underlying Funds are described above in "BDC Risk" and "Closed End Fund Risk" and are described below:

- *Closed-End Fund Risk:* Closed-end funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. As a result, your cost of investing will be higher than the cost of investing directly in a closed-end fund and may be higher than other mutual funds that invest directly in stocks and bonds. Closed-end funds are also subject to management risk because the adviser to the underlying closed-end fund may be unsuccessful in meeting the fund's investment objective. These funds may also trade at a discount or premium to their NAV and may trade at a larger discount or smaller premium subsequent to purchase by the Fund. Since closed-end funds trade on exchanges, the Fund will also incur brokerage expenses and commissions when it buys or sells closed-end fund shares.
- *ETF Tracking Risk:* Investment in the Fund should be made with the understanding that the passive ETFs in which the Fund invests will not be able to replicate exactly the performance of the indices they track because the total return generated by the securities will be reduced by transaction costs incurred in adjusting the actual balance of the securities. In addition, the passive ETFs in which the Fund invests will incur expenses not incurred by their applicable indices. Certain securities comprising the indices tracked by the passive ETFs may, from time to time, temporarily be unavailable, which may further impede the passive ETFs' ability to track their applicable indices.

- *Management Risk:* When the Fund invests in Underlying Funds there is a risk that the investment advisers of those Underlying Funds may make investment decisions that are detrimental to the performance of the Fund.
- *Net Asset Value and Market Price Risk:* The market value of ETF shares may differ from their NAV. This difference in price may be due to the fact that the supply and demand in the market for fund shares at any point in time is not always identical to the supply and demand in the market for the underlying basket of securities. Accordingly, there may be times when shares trade at a premium or discount to NAV.
- *Strategies Risk:* Each Underlying Fund is subject to specific risks, depending on the nature of the fund. These risks could include liquidity risk, sector risk, and foreign currency risk, as well as risks associated with fixed income securities and commodities.

Valuation Risk: The sale price the Fund could receive for a security may differ from the Fund's valuation of the security, particularly for securities that trade in low volume or volatile markets, or that are valued using a fair value methodology. Because portfolio securities of the Fund may be traded on non-U.S. exchanges, and non-U.S. exchanges may be open on days when the Fund does not price its shares, the value of the securities in the Fund's portfolio may change on days when shareholders will not be able to purchase or sell the Fund's shares.

Volatility Risk: The Fund's investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund's portfolio may fluctuate due to events or factors that affect markets generally or that affect a particular investment, industry or sector. The value of an investment in the Fund's portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund's net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

TEMPORARY INVESTMENTS: To respond to adverse market, economic, political or other conditions, the Fund may invest 100% of its total assets, without limitation, in high-quality short-term debt securities and money market instruments. These short-term debt securities and money market instruments include shares of money market mutual funds, commercial paper, certificates of deposit, bankers' acceptances, U.S. Government securities and repurchase agreements. While the Fund is in a defensive position, the opportunity to achieve its investment objective will be limited. Furthermore, to the extent that the Fund invests in money market mutual funds for cash positions, there will be some duplication of expenses because the Fund pays its pro-rata portion of such money market funds' advisory fees and operational fees. The Fund may also invest a substantial portion of its assets in such instruments at any time to maintain liquidity or pending selection of investments in accordance with its policies.

PORTFOLIO HOLDINGS DISCLOSURE: A description of the Fund's policies and procedures regarding the release of portfolio holdings information is available in the SAI. Shareholders may request portfolio holdings schedules at no charge by calling 1-866-866-4848.

CYBERSECURITY: The computer systems, networks and devices used by the Fund and its Service Providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its Service Providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach. The Fund, the Adviser and the Sub-Adviser have limited ability to prevent or mitigate cybersecurity incidents affecting third-party Service Providers.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Fund, the Adviser, the Sub-Adviser, and other Service providers to transact business; prevention of Fund investors from receiving distributions; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and Service Providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

MANAGEMENT

INVESTMENT ADVISER: Regents Park Funds, LLC, located at 4041 MacArthur Boulevard, Suite 155, Newport Beach, CA 92660, serves as the investment adviser to the Fund. Subject to the authority of the Board, the Adviser is responsible for the overall management of the Fund's business affairs pursuant to an investment advisory agreement (the "Advisory Agreement") between the Fund and the Adviser. Regents Park was founded in May 2016 and as of April 30, 2023 the Adviser had approximately \$461 million assets under management. Anfield Group, LLC ("Anfield Group"), which is wholly owned by the David Young and Sandra G. Glain Family Trust, wholly owns Regents Park.

Subject to the supervision of the Board, the Adviser is responsible for managing the Fund's day-to-day operations; including selecting the overall investment strategies of the Fund; monitoring and evaluating investment sub-adviser performance; and providing related administrative services and facilities under an Investment Advisory Agreement between the Fund and the Adviser. The Adviser has the ultimate responsibility to oversee any investment sub-advisers, and to recommend their hiring, termination and replacement, subject to approval of the Trust's Board.

The management fee set forth in the Investment Advisory Agreement is 0.80% annually, to be paid on a monthly basis. For the fiscal year ended April 30, 2023, the aggregate fee paid to the Fund's investment adviser was 0.80% of the Fund's average daily net assets. In addition to investment advisory fees, the Fund pays other expenses including costs incurred in connection with the maintenance of securities law registration, printing and mailing prospectuses and Statements of Additional Information to shareholders, certain financial accounting services, taxes or governmental fees, custodial, transfer and shareholder servicing agent costs, expenses of outside counsel and independent accountants, preparation of shareholder reports and expenses of trustee and shareholders meetings.

The Adviser has contractually agreed to reduce its fees and/or absorb expenses of the Fund, through August 31, 2024, to ensure that total annual fund operating expenses after fee waiver and/or reimbursement (exclusive of any front-end or contingent deferred loads, brokerage fees and commissions, acquired fund fees and expenses, fees and expenses associated with investments in other collective investment vehicles or derivative instruments (including for example option and swap fees and expenses), borrowing costs (such as interest and dividend expense on securities sold short), taxes, and extraordinary expenses, such as litigation expenses) will not exceed 1.50% of the Fund's average daily net assets; subject to possible recoupment from the Fund in future years within the three years after the fees have been waived or reimbursed if such recoupment can be achieved within the lesser of the foregoing expense limits or the expense limits in place at the time of the recoupment. Fee waiver and reimbursement arrangements can decrease the Fund's expenses and boost its performance. A discussion regarding the basis for the Board's approval of the Investment Advisory Agreement is available in the Fund's annual report to shareholders dated April 30, 2023.

INVESTMENT SUB-ADVISER

Anfield Capital Management, LLC, located at 4041 MacArthur Boulevard, Suite 155, Newport Beach, CA 92660, serves as Sub-Adviser to the Fund. The Sub-Adviser was formed in 2009 and currently manages assets for private investors, financial intermediaries, and institutional clients. As of April 30, 2023, it had approximately \$1.8 billion in assets under management. Anfield Group owns a 92% majority interest in Anfield. The Sub-Adviser is an affiliate of the Adviser. The Sub-Adviser is paid by the Adviser, not the Fund.

PORTFOLIO MANAGERS

Peter Van de Zilver, CFA

Mr. Van de Zilver has been Director of Portfolio Analytics and Risk Management at Anfield Capital Management, LLC since 2013. Mr. Van de Zilver retired in 2010 after over 20 years of investment management experience, including from a senior position in the Pacific Investment Management Company's Portfolio Analytics group to work on developing quantitative trading algorithms. At PIMCO, he was responsible for the architecture, development and implementation of many of their Analytics and Risk Management systems. Mr. Van de Zilver holds the Chartered Financial Analyst designation and holds degrees in Physics, Mathematics and Economics from the Universities of Utrecht and Amsterdam, as well as an MA degree in Economics from the University of Southern California, Los Angeles.

David Young

Mr. Young has been the Founder and Chief Executive Officer of Anfield Capital Management, LLC since 2009, and Regents Park Funds, LLC since 2016. With over 30 years of investment experience, Mr. Young has worked with many of the largest and most sophisticated institutional and private investors in investment strategy, portfolio management and asset allocation. At the end of 2008, he retired as Executive Vice President with Pacific Investment Management Company to rejoin the U.C. Irvine Merage School of Business as Adjunct Professor of Finance, and create Anfield Capital Management, LLC. From 1999 to 2006, Mr. Young was head of PIMCO's account management group in London where he built a team of 25 investment professionals managing over 200 client accounts and approximately \$50 billion in assets across the UK, Europe, the Middle East and Africa.

Mr. Young holds the Chartered Financial Analyst Designation, an MBA with a concentration in finance from the Paul Merage School of Business at the University of California, Irvine, and degrees in Economics and Political Science from the University of California, Irvine. He has taught finance and investments courses at the Paul Merage School, the Financial Times Knowledge programs (UK), and CFA exam preparation courses sponsored by the CFA society of Orange County, the USC / Los Angeles CFA Society, and U.K. CFA societies.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed and ownership of Fund shares.

DETERMINATION OF NET ASSET VALUE

The NAV of the Fund's Shares is determined at the close of regular trading on the New York Stock Exchange (normally 4:00 p.m. Eastern Time) on each day the New York Stock Exchange ("NYSE") is open. NAV is computed by determining the aggregate market value of all assets of the Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The NYSE is closed on weekends and New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. The NAV takes into account the expenses and fees of the Fund, including management, administration, and distribution fees, which are accrued daily.

Generally, the Fund's securities are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded or dealt in any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

Fair value pricing involves subjective judgments, and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has appointed the Adviser as its designee (the "Valuation Designee") for all fair value determinations and responsibilities, with respect to the Fund, other than overseeing pricing service providers used by any series of the Trust, including the Fund. If market quotations are not readily available, securities will be valued at their fair market value as determined in good faith by the Valuation Designee in accordance with procedures approved by The Board. This designation is subject to Board oversight and certain reporting and other requirements designed to facilitate the Board's ability effectively to oversee the designee's fair value determinations. The Valuation Designee may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board shall be responsible for reviewing and approving fair value methodologies utilized by a Valuation Designee, which approval shall be based upon whether the Valuation Designee followed the valuation procedures approved by the Board. The Fund may use independent pricing services to assist in calculating the value of the Fund's securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Fund. Because the Fund may invest (directly or indirectly through Underlying Funds) in securities primarily listed on foreign exchanges, and these exchanges may trade on weekends or other days when the Fund (or Underlying Fund) does not price its shares, the value of some of the Fund's portfolio securities may change on days when authorized participants ("APs") may not be able to purchase or redeem Fund shares. In computing the NAV, the Fund values foreign securities held by the Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the NYSE. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in the Fund's portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, the Adviser may need to price the security using the Fund's fair value pricing guidelines. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other funds to determine NAV, or from the price that may be realized upon the actual sale of the security.

With respect to any portion of the Fund's assets that are invested in one or more open-end management investment companies registered under the 1940 Act, the Fund's NAV is calculated based upon the NAV of those open-end management investment companies, and the prospectuses for these companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

Premium/Discount Information

Most investors will buy and sell Shares of the Fund in secondary market transactions through brokers at market prices and the Fund's Shares will trade at market prices. The market price of Shares of the Fund may be greater than, equal to, or less than NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares of the Fund.

Information regarding the intraday value of shares of the Fund, also known as the "indicative optimized portfolio value" ("IOPV"), may but is not required to, be disseminated every 15 seconds throughout each trading day by the securities exchange on which the Fund's shares are listed or by market data vendors or other information providers. The IOPV is based on the current market value of the Fund's securities, including cash required to be deposited in exchange for a Creation Unit. The IOPV is generally determined by using both current market quotations and price quotations obtained from broker-dealers and other market intermediaries that may trade in the Fund's portfolio securities. The IOPV may not reflect the exact composition of the Fund's current portfolio of securities at a particular point in time or the best possible valuation of the Fund's current portfolio. As a result, the IOPV should not be confused with the NAV, which is computed only once a day. Information regarding how often the Shares of the Fund traded at a price above (at a premium to) or below (at a discount to) the NAV of the Fund during the past four calendar quarters, when available, can be found at www.RegentsParkFunds.com.

HOW TO BUY AND SELL SHARES

Shares of the Fund are listed for trading on the Exchange under the symbol DALT. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares and Shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

APs may acquire Shares directly from the Fund, and APs may tender their Shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units, of 25,000 Shares. Purchases and redemptions directly with the Fund must follow the Fund's procedures, which are described in the SAI.

The Fund may liquidate and terminate at any time without shareholder approval.

Share Trading Prices

The approximate value of Shares of the Fund, an amount representing on a per share basis the sum of the current market price of the securities accepted by the Fund in exchange for Shares of the Fund and an estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a "real-time" update of the NAV per Share of the Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Fund is not involved in, or responsible for, the calculation or dissemination of the approximate value of the Shares, and the Fund does not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares of the Fund and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

The Fund's Shares can only be purchased and redeemed directly from the Fund in Creation Units by APs, and the vast majority of trading in the Fund's Shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund's trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund's ability to achieve its investment objective. However, direct trading by APs is critical to ensuring that the Fund's Shares trade at or close to NAV. The Fund also employs fair valuation pricing to minimize potential dilution from market timing. In addition, the Fund imposes transaction fees on purchases and redemptions of Fund Shares to cover the custodial and other costs incurred by the Fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund's trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the Fund's Shares.

DISTRIBUTION AND SERVICE PLAN

The Fund has adopted a distribution and service plan (“Plan”) pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Fund is authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services (“Service Providers”). If a Service Provider provides these services, the Fund may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Fund, and there are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Fund.

Additional Compensation to Financial Intermediaries: Northern Lights Distributors, LLC, the Fund’s distributor, its affiliates, and the Fund’s Adviser or Sub-Adviser or their affiliates may, at their own expense and out of their own legitimate profits, provide additional cash payments to financial intermediaries who sell shares of the Fund, including affiliates of the Adviser or Sub-Adviser. Financial intermediaries include brokers, financial planners, banks, insurance companies, retirement or 401(k) plan administrators and others. These payments may be in addition to any Rule 12b-1 fees that the Fund could charge pursuant to a Rule 12b-1 plan and any sales charges that are disclosed elsewhere in this Prospectus. These payments are generally made to financial intermediaries that provide shareholder or administrative services, or marketing support. Marketing support may include access to sales meetings, sales representatives and financial intermediary management representatives, inclusion of the Fund on a sales list, including a preferred or select sales list, or other sales programs. These payments also may be made as an expense reimbursement in cases where the financial intermediary provides shareholder services to Fund shareholders.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Unlike interests in conventional mutual funds, which typically are bought and sold from and to the fund only at closing NAVs, the Fund’s Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day’s next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the Fund’s portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the Shares’ in-kind redemption mechanism generally will not lead to a tax event for the Fund or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid annually by the Fund. The Fund distributes its net realized capital gains, if any, to shareholders annually.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Taxes

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- The Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

As stated above, dividends from net investment income, if any, ordinarily are declared and paid monthly by the Fund. The Fund may also pay a special distribution at the end of a calendar year to comply with U.S. federal tax requirements. Distributions from the Fund’s net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that the Fund’s dividends attributable to its “qualified dividend income” (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to U.S. federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Fund shares at the rate for net capital gain -- a maximum of 20%. A part of the Fund’s dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to U.S. federal income tax (excluding REITs) and excludes dividends from foreign corporations -- subject to similar restrictions.

In addition, to the extent the Fund designates dividends it pays to you as “section 199A dividends” non-corporate shareholders may be eligible for a 20% deduction with respect to such dividends. The amount of section 199A dividends that the Fund may pay and report to you is limited to the excess of the ordinary REIT dividends, other than capital gain dividends and portions of REIT dividends designated as qualified dividend income, that the Fund receives from REITs for a taxable year over the Fund’s expenses allocable to such dividends.

In general, your distributions are subject to U.S. federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund (if that option is available). Distributions reinvested in additional Shares of the Fund through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional Shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the Shares.

Distributions in excess of the Fund’s current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of (and in reduction of) your basis in the Shares and as capital gain thereafter. A distribution will reduce the Fund’s NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, the Fund is required to withhold 24% of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses from sales of Shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An AP who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger’s aggregate basis in the securities surrendered plus any Cash Component (as defined in the SAI) it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger’s basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the Shares being redeemed and the value of the securities. The Internal Revenue Service (“IRS”), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing “wash sales” or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you purchased or sold and at what price. See “Tax Status” in the SAI for a description of the requirement regarding basis determination methods applicable to Share redemptions and the Fund’s obligation to report basis information to the IRS.

The foregoing discussion summarizes some of the possible consequences under current U.S. federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Shares under all applicable tax laws. See “TAX STATUS” in the SAI for more information.

FUND SERVICE PROVIDERS

Ultimus Fund Solutions, LLC is the Fund’s administrator and fund accountant. It has its principal office at 4221 North 203rd Street, Suite 100, Elkhorn, Nebraska 68022, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds. It is an affiliate of the Distributor.

Brown Brothers Harriman & Co. (“BBH”), 50 Post Office Square, Boston, MA 02110 is the Fund’s custodian and transfer agent.

Northern Lights Distributors, LLC (the “Distributor”), 4221 North 203rd Street, Ste. 100, Elkhorn, NE 68022, is the distributor for the shares of the Fund. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. (“FINRA”).

Blank Rome LLP, 1271 Avenue of the Americas, New York, NY 10020, serves as legal counsel to the Trust.

Deloitte & Touche, LLP, located at 695 Town Center Drive, Suite 1000, Costa Mesa, CA 92626, serves as the independent registered public accounting firm for the current fiscal year. The firm provides services including the audit of the Fund’s annual financial statements, and other tax, audit and related services for the Fund.

OTHER INFORMATION

Investment by Other Investment Companies

For purposes of the 1940 Act, the Fund is a registered investment company, and the acquisition of the Fund's shares by other investment companies is subject to the restrictions of Section 12(d)(1) thereof. Rule 12d1-4 under the 1940 Act allows a registered investment company to invest in Fund shares beyond the limits of Section 12(d)(1) subject to certain conditions, including that a registered investment company enters into an Investment Agreement with the Trust regarding the terms of the investment. Any investment company considering purchasing shares of the Fund in amounts that would cause it to exceed the restrictions of Section 12(d)(1) should contact the Fund.

Continuous Offering

The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Fund on an ongoing basis, a "distribution," as such term is used in the Securities Act of 1933, as amended (the "Securities Act"), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms should also note that dealers who are not "underwriters" but are effecting transactions in Shares, whether or not participating in the distribution of Shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not "underwriters" but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions) and thus dealing with the Shares that are part of an over-allotment within the meaning of Section 4(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act is only available with respect to transactions on a national exchange.

Dealers effecting transactions in the Shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Householding: To reduce expenses, the Fund mails only one copy of the prospectus and each annual and semi-annual report (or, if applicable, each notice of electronic accessibility thereof) to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please call the Fund at 1-866-866-4848 on days the Fund is open for business or contact your financial institution. The Fund will begin sending you individual copies thirty days after receiving your request.

FINANCIAL HIGHLIGHTS

The financial highlights table is intended to help you understand the Fund's financial performance for the periods of the Fund's operations. Certain information reflects financial results for a single Fund share. The total return in the table represents the rate that an investor would have earned (or lost) on an investment in the Fund (assuming reinvestment of all dividends and distributions). The information for the years ended April 30, 2023 and April 30, 2022 has been derived from financial statements audited by Deloitte & Touche, LLP, whose report, along with the Fund's financial statements and related notes, are included in the Fund's April 30, 2023 annual report, which is available upon request and is incorporated by reference in the SAI. The information for the years ended April 30, 2021, April 30, 2020, and April 30, 2019 has been derived from financial statements audited by the Fund's prior auditor.

Per Share Data and Ratios for a Share of Beneficial Interest Outstanding Throughout each Year Presented

	For the Year Ended <u>April 30, 2023</u>	For the Year Ended <u>April 30, 2022</u>	For the Year Ended <u>April 30, 2021</u>	For the Year Ended <u>April 30, 2020</u>	For the Year Ended <u>April 30, 2019</u>
Net asset value, beginning of year	\$ 9.53	\$ 10.33	\$ 7.68	\$ 10.25	\$ 9.97
Activity from investment operations:					
Net investment income ^(a)	0.30	0.18	0.17	0.43	0.36
Net realized and unrealized gain (loss) on investments	<u>(1.16)</u>	<u>(0.79)</u>	<u>2.64</u>	<u>(2.56)</u>	<u>0.05</u>
Total from investment operations	<u>(0.86)</u>	<u>(0.61)</u>	<u>2.81</u>	<u>(2.13)</u>	<u>0.41</u>
Less distributions from:					
Net investment income	(0.33)	(0.19)	(0.16)	(0.37)	(0.13)
Return of capital	<u>—</u>	<u>—</u>	<u>—</u>	<u>(0.07)</u>	<u>—</u>
Total distributions	<u>(0.33)</u>	<u>(0.19)</u>	<u>(0.16)</u>	<u>(0.44)</u>	<u>(0.13)</u>
Net asset value, end of year	<u>\$ 8.34</u>	<u>\$ 9.53</u>	<u>\$ 10.33</u>	<u>\$ 7.68</u>	<u>\$ 10.25</u>
Market price, end of year	<u>\$ 8.32</u>	<u>\$ 9.57</u>	<u>\$ 10.32</u>	<u>\$ 7.70</u>	<u>\$ 10.23</u>
Total return ^{(b)(c)}	<u>(9.06)%</u>	<u>(5.90)%</u>	<u>37.05%</u>	<u>(21.60)%</u>	<u>6.30%</u>
Market Price Total return	<u>(9.65)%</u>	<u>(5.41)%</u>	<u>36.57%</u>	<u>(21.24)%</u>	<u>6.07%</u>
Net assets, end of year (000s)	<u>\$ 61,902</u>	<u>\$ 70,788</u>	<u>\$ 66,652</u>	<u>\$ 73,705</u>	<u>\$ 50,219</u>
Ratio of gross expenses to average net assets ^{(d)(e)}	1.13%	1.09%	1.08%	1.11%	1.35%
Ratio of net expenses to average net assets ^{(e)(f)}	1.13%	1.09%	1.08%	1.26%	1.30%
Ratio of net investment income to average net assets ^(g)	3.37%	1.78%	1.93%	4.44%	3.64%
Portfolio Turnover Rate ^(h)	23%	58%	44%	109%	50%

(a) Per share amounts calculated using the average shares method, which more appropriately presents the per share data for the year.

(b) Total return is calculated assuming a purchase of shares at net asset value on the first day and a sale at net asset value on the last day of the year/period. Distributions are assumed, for the purpose of this calculation, to be reinvested at the ex-dividend date net asset value per share on their respective payment dates. Total return would have been lower or higher absent the fee waiver/expense reimbursement or recapture, respectively.

(c) Includes adjustments in accordance with accounting principles generally accepted in the United States and, consequently, the net asset value for financial reporting purposes and the returns based upon those net asset values may differ from the net asset values and returns for shareholder transactions.

(d) Represents the ratio of expenses to average net assets absent fee waivers and/or expense reimbursements/recapture by the Adviser.

(e) Does not include the expenses of other investment companies in which the fund invests.

(f) Represents the ratio of expenses to average net assets inclusive of fee waivers and/or expense reimbursements/recapture by the Advisor.

(g) Recognition of net investment income by the Fund is affected by the timing of the declaration of dividends by the underlying investment companies in which the Fund invests.

(h) Portfolio turnover rate excludes securities received or delivered from in-kind transactions.
