

# Regents Park Hedged Market Strategy ETF

## SUMMARY PROSPECTUS

May 31, 2024

RPHS

a series of Two Roads Shared Trust

Before you invest, you may want to review the Fund's Prospectus, which contains more information about the Fund and its risks. The Fund's Prospectus and Statement of Additional Information, both dated May 31, 2024, are incorporated by reference into this Summary Prospectus. You can obtain these documents, reports to shareholders, and other information about the Fund online at <https://regentsparkfunds.com/our-funds/regents-park-hedged-market-strategy-etf/?cb=2038>. You can also obtain these documents at no cost by calling 1-866-866-4848 or by sending an email request to [OrderRegentsParkETF@ultimusfundsolutions.com](mailto:OrderRegentsParkETF@ultimusfundsolutions.com). Shares of the Fund are listed and traded on Cboe BZX Exchange, Inc (the "Exchange").

**Investment Objective:** The investment objective of the Fund is to seek to provide capital appreciation through exposure to the U.S. Large Cap equity market while hedging overall market risk. There is no guarantee that the Fund will achieve its investment objective.

**Fees and Expenses of the Fund:** This table describes the fees and expenses that you may pay if you buy, hold and sell shares of the Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and Example below.

<b>Annual Fund Operating Expenses</b> (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees <sup>(1)</sup>	0.75%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Interest Expense	0.04%
<b>Total Annual Fund Operating Expenses</b>	<b>0.79%</b>

(1) The Fund's adviser, Regents Park Funds, LLC (the "Adviser") provides investment advisory service, and is responsible for all of the expenses and liabilities of the Fund, inclusive of fees and expenses of other investment companies in which the Fund may invest, except for any brokerage fees and commissions, taxes, borrowing costs (such as dividend expense on securities sold short and interest), and such extraordinary or non-recurring expenses as may arise, including litigation to which the Fund may be a party and indemnification of the Trust's Board of Trustees and officers with respect thereto in return for a "unitary fee."

**Example:** This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>	<u>5 Years</u>	<u>10 Years</u>
\$81	\$252	\$439	\$978

**Portfolio Turnover:** The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund's performance. For the fiscal year ended January 31, 2024, the fund's portfolio turnover rate was 0% of the average value of its portfolio.

### Principal Investment Strategies:

The Fund is an actively-managed exchange-traded fund ("ETF") that seeks to achieve its investment objective by investing, under normal circumstances, in equity securities represented in, or instruments related or linked to, the S&P 500 Price Index ("S&P 500 Index"). The Fund may invest in various types of U.S. broad equity market linked derivatives including, but not limited to, long and short positions in futures, options, swaps, combinations of long short standardized call and put options contracts on the S&P 500 Index (or other U.S. Large Cap equity market indices) or directly in equity securities of companies listed on, or indirectly in open-end investment companies tracking, the S&P 500 Index (or other U.S. Large Cap equity market indices).

The Fund's Adviser determines the amount of the Fund's portfolio to be invested directly in a basket of equity securities that is correlated to the overall performance of the S&P 500 Index and in equity market index derivatives based on its assessment of their relative valuations. Generally the Fund will purchase equity market index derivatives when the Adviser believes equity index derivatives are fairly valued or undervalued relative to the applicable index, and purchase equity securities when it deems equity index derivatives are overvalued relative to equity securities.

The Fund also structures its investments with a view towards hedging the Fund's portfolio in an effort to mitigate against losses incurred during market declines. The cost of such hedging limits the amount of upside market participation the Fund's portfolio is able to achieve.

The Fund may invest in moderately "out of the money" standard option put contracts ("put options"). An "out of the money" option is one that has no intrinsic value, only extrinsic value; and an option is "out of the money" if its strike price is lower than the market price of the underlying reference asset. A put option is a contract that entitles the purchaser to receive from the seller a cash payment equal to the amount of any depreciation in the value of the reference index below a fixed price as of the valuation date of the option. The put options allow the Adviser to put some or all of the notional value of the Fund's assets to another party, at a pre-specified price which limits the Fund's exposure to declines in the S&P 500 Index or other U.S. Large Cap equity market indices. In addition, the Fund may sell put options on the S&P 500 Index or another U.S. Large Cap equity market index with strike prices closer to or equal to the S&P 500 Index value with a view towards generating option premium income to the Fund.

The Fund may also purchase standard call options on the S&P 500 Index and may purchase standard call options on other U.S. Large Cap market indices. A call option is a contract that entitles the purchaser to receive from the seller a cash payment equal to the amount of any appreciation in the value of the reference index over a fixed price as of the valuation date of the option. The amount of call options that the Fund purchases depends on many market factors including but not limited to the volatility of the broad stock market and the S&P 500 Index or other U.S. Large Cap equity index and the interest rate environment which determines how much income can be earned on the Fund's collateral portfolio.

The Fund expects that, under normal circumstances, less than 10% of the Fund's equity securities and derivatives investments will be invested in securities, options or other derivatives tied to a U.S. Large Cap equity index other than the S&P 500 Index, however, in limited circumstances, the amount of such assets invested in securities, options or other derivatives tied to a U.S. Large Cap equity index other than S&P 500 Index could temporarily increase to as much as 20%.

The Fund uses derivatives in addition to or in place of S&P 500 Index stocks to attempt to equal or exceed the daily performance of the S&P 500 Index. The value of S&P 500 Index derivatives should closely track changes in the value of the S&P 500 Index. The Fund typically will seek to gain long exposure to the S&P 500 Index in an amount, under normal circumstances, approximately equal to the Fund's net assets. However, index derivatives may be purchased with a fraction of the assets that would be needed to purchase the equity securities directly. The Fund's remaining assets that are not invested in derivatives or directly in equity securities, commonly referred to as the "collateral" of Fund, support the derivatives exposures described above. This collateral is actively managed and primarily invested in liquid short-to-intermediate term debt securities and instruments (rated B3/B- or better at purchase), including U.S. Treasury and Government Agency securities, commercial paper, corporate bonds, Agency and Non-Agency MBS, and structured debt such as collateralized loan obligations. The portion of the Fund's portfolio invested in such fixed income and debt instruments will be over and above any required margin collateral on the Fund's derivative investments. If sufficient fixed income and debt instruments are not available for investment, the Fund expects to invest the collateral in exchange traded funds until such instruments become available to the Fund for investment.

The Adviser also may elect to use a portion of Fund assets over and above the net amount required for derivatives margin requirements and any net proceeds from the purchase and sale of derivatives, to purchase additional stock market exposure through various instruments that are linked to or consist directly of stocks in the U.S. Large Cap equity market indices, if in its estimation the potential for additional upside return capture is worth the risk, or to manage the timing of portfolio income from collateral versus establishing the desired upside Index capture ratio (*i.e.*, the percentage of additional market exposure that the Adviser elects to purchase).

Although the Fund normally does not engage in any direct borrowing, leverage is inherent in the derivatives it trades. Leverage magnifies exposure to the swings in prices of the reference asset underlying a derivative and results in increased volatility, which means the Fund will generally have the potential for greater gains, as well as the potential for greater losses, than a fund that does not use derivatives.

### ***The S&P 500 Index***

The S&P 500 Index is a large-cap, market-weighted, U.S. equities index that tracks the price (excluding dividends) of the leading companies that reflect the industries of the U.S. economy and is often considered a proxy for the stock market in general. As of April 30, 2024, the S&P 500 Index was comprised of 503 constituent securities, representing 500 companies, with a market capitalization range of between \$4.69 billion and \$2.89 trillion, and a mean market cap of \$88.17 billion (source: S&P Dow Jones Indices).

**Principal Investment Risks: As with all funds, there is the risk that you could lose money through your investment in the Fund. The Fund is not intended to be a complete investment program but rather one component of a diversified investment portfolio. An investment in the Fund is not guaranteed to achieve its investment objective; is not a deposit with a bank; is not insured, endorsed or guaranteed by the Federal Deposit Insurance Corporation or any other government agency; and is subject to investment risks. The value of your investment in the Fund, as well as the amount of return you receive on your investment, may fluctuate significantly. You may lose part or all of your investment in the Fund or your investment may not perform as well as other similar investments. Many factors affect the Fund's net asset value and performance. Each risk summarized below is a principal risk of investing in the Fund and different risks may be more significant at different times depending upon market conditions or other factors. The Fund may be subject to the risks described below through its own direct investments and indirectly through investments in underlying funds. As with any fund, there is no guarantee that the Fund will achieve its goal.**

*Equity Risk:* Equity securities are susceptible to general market fluctuations, volatile increases and decreases in value as market confidence in and perceptions of their issuers change and unexpected trading activity among retail investors. Factors that may influence the price of equity securities include developments affecting a specific company or industry, or changing economic, political or market conditions.

*Derivatives Risk:* The derivative instruments in which the Fund may invest may be more volatile than other instruments, and may be subject to unanticipated market movements, which are potentially unlimited. The risks associated with investments in derivatives also include leverage, liquidity, interest rate, market, credit and management risks, mispricing or improper valuation. Certain derivatives require the Fund to pledge cash or liquid securities as margin or collateral, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin or collateral if the value of the derivative position changes in a manner adverse to the Fund. Changes in the market value of a derivative may not correlate perfectly with the underlying asset, rate or index, and the Fund could lose more than the principal amount invested. In addition, if a derivative is being used for hedging purposes there can be no assurance given that each derivative position will achieve a perfect correlation with the security or currency against which it is being hedged, or that a particular derivative position will be available when sought by the portfolio manager.

*Options Risk:* The use of options involves investment strategies and risks different from those associated with ordinary portfolio securities transactions and depends on the ability of the Fund's portfolio managers to forecast market movements correctly. The prices of options are volatile and are influenced by, among other things, actual and anticipated changes in the value of the underlying instrument, or in interest or currency exchange rates, including the anticipated volatility, which in turn are affected by fiscal and monetary policies and by national and international political and economic events. The effective use of options also depends on the Fund's ability to terminate option positions at times deemed desirable to do so. There is no assurance that the Fund will be able to effect closing transactions at any particular time or at an acceptable price. In addition, there may at times be an imperfect correlation between the movement in values of options and their underlying securities and there may at times not be a liquid secondary market for certain options.

*Hedging Transactions Risk:* The Sub-Adviser from time to time employs various hedging techniques. The success of the Fund's hedging strategy will be subject to the Sub-Adviser's ability to correctly assess the degree of correlation between the performance of the instruments used in the hedging strategy and the performance of the investments in the portfolio being hedged. Because the characteristics of many securities change as markets change or time passes, the success of the Fund's hedging strategy will also be subject to the Sub-Adviser's ability to continually recalculate, readjust, and execute hedges in an efficient and timely manner. For a variety of reasons, the Sub-Adviser may not seek to establish a perfect correlation between such hedging instruments and the portfolio holdings being hedged. Such imperfect correlation may prevent the Fund from achieving the intended hedge or expose the Fund to risk of loss. In addition, it is not possible to hedge fully or perfectly against any risk, and hedging entails its own costs.

*Index Risk:* The Fund's investments are subject to the risks associated with changes to the S&P 500 Index. The Fund will be negatively affected by general declines in the securities and asset classes represented in the S&P 500 Index. Market disruptions and regulatory restrictions could have an adverse effect on the Fund's ability to adjust its exposure to the S&P 500 Index. S&P Dow Jones Indices LLC (the "Index Provider") relies on third party data it believes to be reliable in constructing the S&P 500 Index, but it does not guarantee the accuracy or availability of any such third party data, and there is also no guarantee with respect to the accuracy, availability or timeliness of the production of the S&P 500 Index. Because the Fund structures its investments in order to hedge the Fund's portfolio against declines in the S&P 500 Index, the performance of the Fund and the S&P 500 Index will differ from each other. In addition, the Fund incurs operating expenses and portfolio transaction costs not incurred by the S&P 500 Index. These risks may be heightened during times of market volatility or other unusual market conditions.

*Fixed Income Securities Risk:* Fixed income securities are subject to interest rate risk, call risk, prepayment and extension risk, credit risk, duration, and liquidity risk. In addition, current market conditions may pose heightened risks for fixed income securities. When the Fund invests in fixed income securities or derivatives, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities or derivatives owned by the Fund. In general, the market price of fixed income securities with longer maturities or durations will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments. Moreover, new regulations applicable to and changing business practices of financial intermediaries that make markets in fixed income securities have resulted in less market making activity for certain fixed income securities, which has reduced the liquidity and may increase the volatility for such fixed income securities. The fixed-income securities market can be susceptible to increases in volatility and decreases in liquidity. Liquidity may decline unpredictably in response to overall economic conditions or credit tightening. For example, a general rise in interest rates may cause investors to move out of fixed income securities on a large scale, which could adversely affect the price and liquidity of fixed income securities and could also result in increased redemptions for the Fund. Heavy redemptions could cause the Fund to sell assets at inopportune times or at a loss or depressed value and could hurt the Fund's performance. Duration risk arises when holding long duration and long maturity investments, which will magnify certain risks, including interest rate risk and credit risk. Longer-term securities may be more sensitive to interest rate changes. Given the recent, historically low interest rates and the potential for increases in those rates, a heightened risk is posed by rising interest rates to longer-term fixed income securities. Effective duration estimates price changes for relatively small changes in rates. If rates rise significantly, effective duration may tend to understate the drop in a security's price. If rates drop significantly, effective duration may tend to overstate the rise in a security's price.

*Counterparty Risk:* The stability and liquidity of many derivative transactions depends in large part on the creditworthiness of the parties to the transactions. If a counterparty to such a transaction defaults, exercising contractual rights may involve delays or costs for the Fund. Furthermore, there is a risk that a counterparty could become the subject of insolvency proceedings, and that the recovery of securities and other assets from such counterparty will be delayed or be of a value less than the value of the securities or assets originally entrusted to such counterparty. In a transaction involving cleared derivatives, the Fund's counterparty is a clearing house, rather than a bank or broker. Since the Fund is not a member of clearing houses and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives positions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through its accounts at clearing members. Clearing members guarantee performance of their clients' obligations to the clearing house. In contrast to bilateral derivatives transactions, following a period of advance notice to the Fund, clearing members generally can require termination of existing cleared derivatives transactions at any time and increases in margin above the margin that it required at the beginning of a transaction. Clearing houses also have broad rights to increase margin requirements for existing transactions and to terminate transactions. Any such increase or termination could interfere with the ability of the Fund to pursue its investment strategy. Also, the Fund is subject to execution risk if it enters into a derivatives transaction that is required to be cleared (or that the Adviser expects to be cleared), and no clearing member is willing or able to clear the transaction on the Fund's behalf. While the documentation in place between the Fund and its clearing members generally provides that the clearing members will accept for clearing all transactions submitted for clearing that are within credit limits specified by the clearing members in advance, the Fund could be subject to this execution risk if the Fund submits for clearing transactions that exceed such credit limits, if the clearing house does not accept the transactions for clearing, or if the clearing members do not comply with their agreement to clear such transactions. In that case, the transaction might have to be terminated, and the Fund could lose some or all of the benefit of any increase in the value of the transaction after the time of the transaction. In addition, new regulations could, among other things, restrict the Fund's ability to engage in, or increase the cost to the Fund of, derivatives transactions, for example, by making some types of derivatives no longer available to the Fund or increasing margin or capital requirements. If the Fund is not able to enter into a particular derivatives transaction, the Fund's investment performance and risk profile could be adversely affected as a result.

*Yield Curve Risk:* This is the risk that there is an adverse shift in market interest rates of fixed income investments. The risk is associated with either flattening or steepening of the yield curve, which is a result of changing yields among comparable bonds with different maturities. If the yield curve flattens, then the yield spread between long- and short-term interest rates narrows and the price of a bond will change. If the curve steepens, then the spread between the long- and short-term interest rates increases which means long-term bond prices decrease relative to short-term bond prices.

*Market Events Risk:* There has been increased volatility, depressed valuations, decreased liquidity and heightened uncertainty in the financial markets during the past several years, including what was experienced in 2020. These conditions may continue, recur, worsen or spread. The U.S. government and the Federal Reserve, as well as certain foreign governments and central banks, took steps to support financial markets, including by lowering interest rates to historically low levels. This and other government intervention may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. The U.S. government and the Federal Reserve market support activities, including by increasing interest rates. Such reduction, including interest rate increases, could negatively affect financial markets generally, increase market volatility and reduce the value and liquidity of securities in which the Fund invests. Policy and legislative changes in the United States and in other countries may also contribute to decreased liquidity and increased volatility in the financial markets. The impact of these influences on the markets, and the practical implications for market participants, may not be fully known for some time.

*Market Risk:* Overall market risk may affect the value of individual instruments in which the Fund invests. The Fund is subject to the risk that the securities markets will move down, sometimes rapidly and unpredictably, based on overall economic conditions and other factors, which may negatively affect the Fund's performance. Factors such as domestic and foreign (non-U.S.) economic growth and market conditions, real or perceived adverse economic or political conditions, military conflicts, acts of terrorism, social unrest, natural disasters, recessions, inflation, changes in interest rate levels, supply chain disruptions, sanctions, the spread of infectious illness or other public health threats, lack of liquidity in the bond or other markets, volatility in the equities or other securities markets or adverse investor sentiment affect the securities markets and political events affect the securities markets. U.S. and foreign stock markets have experienced periods of substantial price volatility in the past and may do so again in the future. Securities markets also may experience long periods of decline in value. A change in financial condition or other event affecting a single issuer or market may adversely impact securities markets as a whole. Rates of inflation have recently risen. The value of assets or income from an investment may be worth less in the future as inflation decreases the value of money. As inflation increases, the real value of the Fund's assets can decline as can the value of the Fund's distributions. When the value of the Fund's investments goes down, your investment in the Fund decreases in value and you could lose money.

Local, state, regional, national or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, recessions, or other events could have a significant impact on the Fund and its investments and could result in decreases to the Fund's net asset value. Political, geopolitical, natural and other events, including war, terrorism, trade disputes, government shutdowns, market closures, natural and environmental disasters, epidemics, pandemics and other public health crises and related events and governments' reactions to such events have led, and in the future may lead, to economic uncertainty, decreased economic activity, increased market volatility and other disruptive effects on U.S. and global economies and markets. Such events may have significant adverse direct or indirect effects on the Fund and its investments. For example, a widespread health crisis such as a global pandemic could cause substantial market volatility, exchange trading suspensions and closures, impact the ability to complete redemptions, and affect Fund performance. A health crisis may exacerbate other pre-existing political, social and economic risks. In addition, the increasing interconnectedness of markets around the world may result in many markets being affected by events or conditions in a single country or region or events affecting a single or small number of issuers.

*Absence of an Active Market Risk:* The Fund faces numerous market trading risks, including the potential lack of an active market for Fund shares due to a limited number of market makers or authorized participants. The Fund may rely on a small number of third-party market makers to provide a market for the purchase and sale of shares and market makers are under no obligation to make a market in the Fund's shares. Additionally, only a limited number of institutions act as authorized participants for the Fund and only an authorized participant may engage in creation or redemption transactions directly with the Fund and are not obligated to submit purchase or redemption orders for Creation Units. Decisions by market makers or authorized participants to reduce their role or step away from these activities in times of market stress could inhibit the effectiveness of the arbitrage process in maintaining the relationship between the underlying values of the Fund's portfolio securities and the Fund's market price. Any trading halt or other problem relating to the trading activity of these market makers or any issues disrupting the authorized participants' ability to proceed with creation and/or redemption orders could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Fund's shares are trading on the Exchange, which could result in a decrease in value of the Fund's shares. This reduced effectiveness could result in Fund shares trading at a premium or discount to net asset value and also in greater than normal intraday bid-ask spreads for Fund shares.

*Calculation Methodology Risk:* The S&P 500 Index relies on various sources of information to assess the criteria of issuers included in the S&P 500 Index, including information that may be based on assumptions and estimates. Neither the Fund, the Adviser, the Sub-Adviser, nor the S&P 500 Index Provider can offer assurances that the S&P 500 Index's calculation methodology or sources of information will provide an accurate assessment of included issuers or correct valuation of securities, nor can they guarantee the availability or timeliness of the production of the S&P 500 Index.

*Cash Transactions Risk:* The Fund may effect all or a portion of its creations and redemptions for cash rather than in-kind. As a result, an investment in the Fund may be less tax-efficient than an investment in an ETF that effects its creations and redemptions only in-kind. ETFs are able to make in-kind redemptions and avoid being taxed on gains on the distributed portfolio securities at the fund level. If the Fund effects redemptions for cash, the Fund may be required to sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. Any recognized gain on these sales by the Fund will generally cause the Fund to recognize a gain it might not otherwise have recognized, or to recognize such gain sooner than would otherwise be required if it were to distribute portfolio securities only in-kind. The Fund intends to distribute these gains to shareholders to avoid being taxed on this gain at the fund level and otherwise comply with the special tax rules that apply to it. This strategy may cause shareholders to be subject to tax on gains they would not otherwise be subject to, or at an earlier date than if they had made an investment in a different ETF. Moreover, cash transactions may have to be carried out over several days if the securities market is relatively illiquid and may involve considerable brokerage fees and taxes. These brokerage fees and taxes, which will be higher than if the Fund sold and redeemed its shares principally in-kind, will be passed on to those purchasing and redeeming Creation Units in the form of creation and redemption transaction fees. In addition, these factors may result in wider spreads between the bid and the offered prices of the Fund's shares than for ETFs that distribute portfolio securities in-kind. The Fund's use of cash for creations and redemptions could also result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund's ability to achieve its investment objective.

*Cash Redemption Risk:* The Fund expects to pay out its redemption proceeds principally in cash rather than through the in-kind delivery of portfolio securities. The Fund may be required sell portfolio securities in order to obtain the cash needed to distribute redemption proceeds. This may cause the Fund to recognize a capital gain that it might not have incurred if it had made a redemption in-kind. As a result, the Fund may pay out higher annual capital gains distributions than if the in-kind redemption process was used. Only certain institutional investors known as authorized participants who have entered into an agreement with the Fund's distributor may redeem shares from the Fund directly; all other investors buy and sell shares at market prices on the Exchange.

*Cybersecurity Risk:* There is risk to the Fund of an unauthorized breach and access to fund assets, customer data (including private shareholder information), or proprietary information, or the risk of an incident occurring that causes the Fund, the investment adviser, investment sub-adviser, custodian, transfer agent, distributor and other service providers and financial intermediaries ("Service Providers") to suffer data breaches, data corruption or lose operational functionality. Successful cyber-attacks or other cyber-failures or events affecting the Fund or its service providers may adversely impact the Fund or its shareholders.

*ETF Structure Risks:* The Fund is structured as an ETF and as a result is subject to special risks, including:

- *Not Individually Redeemable:* Shares are not individually redeemable and may be redeemed by the Fund at net asset value ("NAV") only in large blocks known as "Creation Units." You may incur brokerage costs purchasing enough shares to constitute a Creation Unit.
- *Trading Issues:* Trading in shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable, such as extraordinary market volatility. There can be no assurance that shares will continue to meet the listing requirements of the Exchange. An active trading market for the Fund's shares may not be developed or maintained. If the Fund's shares are traded outside a collateralized settlement system, the number of financial institutions that can act as authorized participants that can post collateral on an agency basis is limited, which may limit the market for the Fund's shares.

- *Market Price Variance Risk:* The market prices of shares will fluctuate in response to changes in NAV and supply and demand for shares and will include a “bid-ask spread” charged by the exchange specialists, market makers or other participants that trade the particular security. There may be times when the market price and the NAV vary significantly. This means that shares may trade at a discount or premium to NAV. If a shareholder purchases shares at a time when the market price is at a premium to the NAV or sells shares at a time when the market price is at a discount to NAV, the shareholder may sustain losses if the shares are sold at a price that is less than the price paid by the shareholder for the shares.
  - In times of market stress, such as what was experienced in 2020 with the COVID-19 pandemic, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Fund shares and the Fund’s net asset value.
  - The market price for the Fund’s shares may deviate from the Fund’s net asset value, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Fund shares than the Fund’s net asset value, which is reflected in the bid and ask price for Fund shares or in the closing price.
  - When all or a portion of an ETFs underlying securities trade in a market that is closed when the market for the Fund’s shares is open, there may be changes from the last quote of the closed market and the quote from the Fund’s domestic trading day, which could lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.
  - In stressed market conditions, the market for the Fund’s shares may become less liquid in response to the deteriorating liquidity of the Fund’s portfolio. This adverse effect on the liquidity of the Fund’s shares may, in turn, lead to differences between the market value of the Fund’s shares and the Fund’s net asset value.

*Fluctuation of Net Asset Value Risk:* The NAV of the Fund’s shares will generally fluctuate with changes in the market value of the Fund’s holdings. The market prices of the shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for the shares on the Exchange. The Sub-Adviser cannot predict whether the shares will trade below, at or above their NAV. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for the shares will be closely related to, but not identical to, the same forces influencing the prices of the Fund’s holdings trading individually or in the aggregate at any point in time. In addition, unlike conventional ETFs, the Fund is not an index fund. The Fund is actively managed and does not seek to replicate the performance of a specified index. Actively managed ETFs have a limited trading history and, therefore, there can be no assurance as to whether and/or the extent to which the Shares will trade at premiums or discounts to NAV.

*Gap Risk:* The Fund is subject to the risk that a stock price or derivative value will change dramatically from one level to another with no trading in between and/or before the Fund can exit from the investment. Usually such movements occur when there are adverse news announcements, which can cause a stock price or derivative value to drop substantially from the previous day’s closing price. Trading halts may lead to gap risk.

*Leveraging Risk:* To the extent the Fund uses leveraging techniques, its net asset value may be more volatile because leverage tends to exaggerate the effect of changes in interest rates and any increase or decrease in the value of the Fund’s investments. Leverage risk is created when an investment exposes the Fund to a level of risk that exceeds the amount invested. The use of certain derivatives may increase leveraging risk and adverse changes in the value or level of the underlying asset, rate, or index may result in a loss substantially greater than the amount paid for the derivative. The use of leverage may exaggerate any increase or decrease in the net asset value, causing the Fund to be more volatile and small changes in the value of the underlying instrument may produce disproportionate losses to the Fund. The use of leverage may increase expenses and increase the impact of the Fund’s other risks. Certain derivatives require the Fund to make margin payments, a form of security deposit intended to protect against nonperformance of the derivative contract. The Fund may have to post additional margin if the value of the derivative position changes in a manner adverse to the Fund. The use of leverage may cause the Fund to liquidate portfolio positions when it may not be advantageous to do so in order to comply with limits on leverage imposed by the Investment Company Act of 1940, as amended (the “1940 Act”), to satisfy its obligations, to meet additional margin or collateral or regulatory requirements or to meet redemption requests resulting in increased volatility of returns. Leverage, including borrowing, may cause the Fund to be more volatile than if the Fund had not been leveraged.

*Market Capitalization Risk:* The Fund’s anticipated weighting towards larger-sized companies subjects the Fund to the risk that larger companies may not be able to attain the high growth rates of successful smaller companies, especially during strong economic periods, and that they may be less capable of responding quickly to competitive challenges and industry changes. Because the Fund may invest in companies of any size, its share price could be more volatile than the Fund that invests only in large companies. Small and medium-sized companies typically have less experienced management, narrower product lines, more limited financial resources, and less publicly available information than larger companies. The earnings and prospects of small and medium sized companies are more volatile than larger companies and may experience higher failure rates than larger companies. Medium sized companies normally have a lower trading volume than larger companies, which may tend to make their market price fall more disproportionately than larger companies in response to selling pressures.

**Management Risk:** The Fund’s investment strategies may not result in an increase in the value of your investment or in overall performance equal to other similar investment vehicles having similar investment strategies to those of the Fund. Management risk includes the risk that the quantitative model used by the Fund’s investment sub-adviser may not perform as expected, particularly in volatile markets.

**New Fund Risk:** The Fund is recently formed. Investors bear the risk that the Fund may not grow to or maintain economically viable size, may not be successful in implementing its investment strategy, and may not employ a successful investment strategy, any of which could result in the Fund being liquidated at any time without shareholder approval and/or at a time that may not be favorable for certain shareholders. Such a liquidation could have negative tax consequences for shareholders.

**Portfolio Turnover Risk:** The Fund may experience high portfolio turnover, including investments made on a shorter-term basis, which may lead to increased Fund expenses that may result in lower investment returns. High portfolio turnover may also result in higher short-term capital gains taxable to shareholders.

**Trading Issues Risk:** Trading in Fund shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in shares inadvisable. In addition, trading in Fund shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange’s “circuit breaker” rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of the Fund will continue to be met or will remain unchanged. The Fund may have difficulty maintaining its listing on the Exchange in the event the Fund’s assets are small, the Fund does not have enough shareholders, or if the Fund is unable to proceed with creation and/or redemption orders.

**U.S. Government Securities Risk:** Treasury obligations may differ in their interest rates, maturities, times of issuance and other characteristics. Obligations of U.S. Government agencies and authorities are supported by varying degrees of credit but generally are not backed by the full faith and credit of the U.S. Government. No assurance can be given that the U.S. Government will provide financial support to its agencies and authorities if it is not obligated by law to do so. In addition, the value of U.S. Government securities may be affected by changes in the credit rating of the U.S. Government.

**Volatility Risk:** The Fund’s investments may appreciate or decrease significantly in value over short periods of time. The value of an investment in the Fund’s portfolio may fluctuate due to events or factors that affect markets generally or that affect a particular investment, industry or sector. The value of an investment in the Fund’s portfolio may also be more volatile than the market as a whole. This volatility may affect the Fund’s net asset value per share, including by causing it to experience significant increases or declines in value over short periods of time. Events or financial circumstances affecting individual investments, industries or sectors may increase the volatility of the Fund.

**Performance:** The bar chart and performance table below show the variability of the Fund’s returns, which is some indication of the risks of investing in the Fund by showing the Fund’s one-year and since inception performance compared with those of a broad measure of market performance. The bar chart shows performance of the Fund’s shares for each calendar year since the Fund’s inception. The performance table includes a comparison of the performance of the Fund over time to the performance of a broad-based securities market index. You should be aware that the Fund’s past performance (before and after taxes) is not necessarily an indication of how the Fund will perform in the future. Updated performance information will be available at no cost by visiting [www.RegentsParkFunds.com](http://www.RegentsParkFunds.com) or by calling 1-866-866-4848.

**Performance Bar Chart for Calendar Year Ended December 31<sup>st</sup>**

Best Quarter	12/31/2023	8.63%
Worst Quarter	09/30/2023	-2.58%

The year-to-date return as of the most recent calendar quarter, which ended March 31, 2024, was 8.71%

**Performance Table**  
**Average Annual Total Returns**  
**(For the year ended December 31, 2023)**

	<b>One Year</b>	<b>Since Inception<sup>(1)</sup></b>
Return before taxes	11.72%	-2.59%
Return after taxes on Distributions	9.45%	-4.00%
Return after taxes on Distributions and Sale of Fund Shares	6.93%	-2.56%
<b>S&amp;P 500 Total Return Index<sup>(2)</sup></b> <i>(reflects no deduction for fees, expenses or taxes)</i>	26.29%	3.77%

(1) Inception date is March 30, 2022.

(2) The S&P 500 Total Return Index is a market capitalization-weighted index of 500 widely held common stocks. Investors may not invest directly in an index. Index returns are gross of any fees, brokerage commissions or other expenses of investing.

*After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown above, and after-tax returns shown are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts.*

**Investment Adviser:** Regents Park Funds, LLC (the “Adviser”)

**Investment Sub-Adviser:** Anfield Capital Management, LLC (the “Sub-Adviser”)

**Portfolio Managers:** The Fund is jointly managed by Peter van de Zilver, Head of Portfolio Manager Analytics and Risk Management, David Young, Chief Executive Officer, Cyrille Conseil, Head of Portfolio Management and Cameron Baxter Portfolio Manager and Trader. Messrs. van de Zilver and Young have managed the Fund since it commenced operations in 2022. Mr. Baxter has managed the Fund since 2023 and Mr. Conseil has managed the Fund since 2024.

**Purchase and Sale of Fund Shares:** The Fund will issue and redeem shares at NAV only in large blocks of 25,000 shares (each block of shares is called a “Creation Unit”). Creation Units are issued and redeemed for cash and/or in-kind for securities. Except when aggregated in Creation Units, the shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Individual shares of the Fund may only be purchased and sold in secondary market transactions through a broker or dealer at market price. Because shares trade at market prices, rather than NAV, shares of the Fund may trade at a price that is greater than NAV (*i.e.*, a premium) or less than NAV (*i.e.*, a discount).

An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market (the “bid-ask spread”).

Recent information, including information about the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads, is included on the Fund’s website at [RegentsParkFunds.com](https://www.RegentsParkFunds.com).

**Tax Information:** The Fund’s distributions generally will be taxable as ordinary income, long-term capital gains or qualified dividend income, or a combination of the three. A sale of shares may result in capital gain or loss.

**Payments to Broker-Dealers and Other Financial Intermediaries:** If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies, including the Adviser or the Sub-Adviser, may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.
